Date______________________________
_______Accepted ________ Rejected___

Locational Information and Survey Conditions

SHPO Log # 001010713 MARS Project # 1885
County: Cook Quadrangle: 7.5 Min. Blue Island & Lake Calumet
Project Type/Title: Red Line Extension-Archaeological Resources-Environmental Impact Statement
Funding/Permitting Agency: FTA
Section: Portions of Sections 4, 9, 16, 21, 22, 26, 27, and 35, Township 37 North, Range 14 East, Calumet Township (Figure 1).
Natural Division (No.): 3c
U.T.M.: To center of the project area: 16T 447985E 4615020N (WGS84)
Project Description: Phase I archaeological reconnaissance survey
Topography: Urban
Soils: 125A Selma loam (0-2% slopes), 533 & 534A (Urban Land), 802A, 805A, 805B, 805D (Orthents), 811A Anthroportic Udorthents, 2232A Orthents (Figure 2).
Drainage: Chicago/Calumet
Land Use/Ground Cover (Include % Visibility): The land use within the Phase I project boundary consisted of a mix of disturbed ground surface from residential development and grass parcels with 0% visibility.

Archaeological and Historical Information:

Historic Plats/Atlases/Sources: 1822 & 1839 Government Land Office plat (Appendix B: Figure 1); 1861, 1870, 1886, 1890, 1898, 1901, 1926, historic plat maps and historic topographic maps (Appendix B: Figures 2-8), 1938 historic aerials (Appendix B: Figures 9-13), Sanborn Fire Insurance Maps (Appendix B: Figures 14-25).
Previously Reported Sites: There are no previously recorded archaeological sites present within the project area. There are 12 archaeological sites (11Ck15, 11Ck28, 11Ck177, 11Ck244-250, 11Ck1226, and 11Ck1240) present within 1.6 km (1 mile) of the project area.
Previous Surveys: There are two recorded surveys present (ASSR#10639 & 18465) within the project area. There are five previous surveys present (ASSR#570, 4170, 11173, 20873, and 91240) within 1.6 km (1 mile) of the project area.

Regional Archaeologist Contacted: Jay Martinez, M.A, RPA
Investigation Techniques: Pedestrian Survey and Digital Photo Recordation.
Time Expended: 8-person days
Sites/Find Spots Located: None
Cultural Material: None
Curated At: N/A
Collection Techniques: N/A
Area Surveyed (Acres & Square Meters): 152.8 acres/ 618,373.3 square meters

Results of Investigation and Recommendations:

X Phase I Archaeological Reconnaissance located no archaeological material; Project clearance Recommended.
__ Phase I Archaeological Reconnaissance located archaeological material; Project clearance Recommended.
__ Phase I Archaeological Reconnaissance located archaeological material; Phase II Testing Recommended.

Comments:

From June 15 to June 16, 2020 Midwest Archaeological Research Services (MARS), conducted a Phase I archaeological reconnaissance survey on the Preferred Alignment. The project area is in portions of Sections 4, 9, 16, 21, 22, 26, 27, and 35 of Township 37 North, Range 14 East (Calumet) of the Third Principal Meridian (**Figures 1-2 and 1-3**). MARS archaeologists did not identify any cultural material within their 53 excavated shovel probes during the Phase I archaeological survey (**Appendix A: Figures 5-7, 28-29**). Additionally, no recorded archaeological sites would be impacted during construction of the Preferred Alignment. **MARS recommends project clearance**.

Archaeological Contractor Information:

Archaeological Contractor: Midwest Archaeological Research Services
Address/Phone: PO Box 2533, Crystal Lake, Illinois 60039/ (815) 568-0680
Surveyed by: Jay Martinez and Lucas Howser Survey Date(s): 6-15-2020 to 6-16-2020
Report Completed by: Jay Martinez and Lucas Howser Date: 8-25-2020
Submitted by (Signature and Title):
Jay Martinez, President

Jay Martinez

Attachment Check List: (#1 through #4 are MANDITORY)

X 1) Portion of USGS 7.5’ Topographic Map(s) Showing Project Location.
X 2) Project Maps(s) Depicting Survey Limits.
___ 3) Site Form(s): Two Copies of Each Form.
X 4) All Relevant Project Correspondence
X 5) Additional Sheets as Necessary.

Address of Owner/Agent to Whom SHPO Comment Should Be Mailed:

Address: Chicago Transit Authority (CTA).
567 West Lake Street

Cook County
Chicago
Comprehensive Grant Program
Application for Several Chicago Housing Authority Developments
IHPA Log #01092192

October 22, 1992

Ms. Gertrude W. Jordan
U.S. Dept. of Housing & Urban Development
Chicago Regional Office, Region V
77 West Jackson Boulevard
Chicago, Illinois 60604-3507

Dear Ms. Jordan:

We have reviewed the referenced project. In our opinion, the following complexes are probably eligible for the National Register of Historic Places pursuant to criterion (a) for community planning and criterion (c) for architecture:

IL-2-1	Ida B. Wells Homes
IL-2-2	Francis Cabrini Homes
IL-2-7	Altgeld Gardens
IL-2-23	Jane Addams Houses
IL-2-24	Julia C. Lathrop Homes
IL-2-25	Trumbull Park Homes

The other properties presented in your September 21, 1992 submission either do not meet the 50 year age requirement or do not meet the National Register eligibility criteria.

Those properties that do meet the National Register criteria may either be treated as eligible or you may wish to contest our opinion and seek a ruling from the Keeper of the National Register in Washington, D.C.

If you decide to treat the properties as eligible, we suggest that the most expeditious way to handle their maintenance is to develop a Programmatic Agreement which would detail acceptable building treatments in accordance with the Secretary of the Interior's "Standards for Rehabilitation and Guidelines for Rehabilitating Historic Buildings".

We look forward to a site inspection of these properties and a meeting to work out an acceptable program that will satisfy both your program requirements and those of the National Historic Preservation Act.

If you have any questions, please contact Anne Haaker, at Illinois Historic Preservation Agency, Old State Capitol, Springfield, Illinois 62071, or at 217/785-5027.

Sincerely,

Theodore W. Hild
Deputy State Historic
Preservation Officer

REF: Chicago Housing Authority Comprehensive Grant Program

Dear Mr. Garaffa:

Enclosed is a copy of the Programmatic Agreement which has been executed for the referenced program. The execution of the Agreement, and fulfillment of the provisions set forth therein, satisfies the requirements of Section 106 of the National Historic Preservation Act and the Council's regulations. A copy of the Agreement has also been sent to the Illinois State Historic Preservation Officer (SHPO).

We look forward to consulting further with HUD regarding the development of treatment plans for those public housing complexes formally determine eligible by the Keeper of the National Register of Historic Places. If we can be of assistance, please contact Charlene Dwin Vaughn at 202-606-8505.

We appreciate your continued cooperation.

Sincerely,

Don L. Klima
Director
Eastern Office of Review

Enclosure

PROGRAMMATIC AGREEMENT

AMONG THE U. S. DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT, THE ILLINOIS HISTORIC PRESERVATION AGENCY, AND THE ADVISORY COUNCIL ON HISTORIC PRESERVATION FOR THE ADMINISTRATION OF THE COMPREHENSIVE GRANT PROGRAM IN CHICAGO, ILLINOIS

WHEREAS, the U. S. Department of Housing and Urban Development (HUD) proposes to provide funding to the Chicago Housing Authority (CHA) for purposes of rehabilitation and repair activities as set forth in the Comprehensive Grant program application for Fiscal Year 1992; and

WHEREAS, HUD has determined that the administration of this program may have an affect on properties that may be eligible for inclusion in the National Register of Historic Places and has consulted with the Illinois Historic Preservation Agency (IHPA) and Advisory Council on Historic Preservation (Council) pursuant to 36 CFR 800.13 implementing the National Historic Preservation Act (NHPA, 16 U.S.C. 470 et. seq.); and

WHEREAS, CHA has particpated in the consultation and has been invited to concur in the programmatic agreement.

NOW, THEREFORE, HUD, in coordination with the IHPA and the Council, agree that the Comprehensive Grant program at CHA shall be administered in accordance with the following stipulations in order to satisfy HUD's Section 106 responsibilities for those individual undertakings of the program being undertaken by CHA.

STIPULATIONS

HUD will ensure that the following measures are carried out.

DETERMINATION OF ELIGIBILITY

1. Within six months of the execution of this agreement HUD will request a determination of eligibility for the six public housing complexes listed below from the Keeper of the National Register pursuant to 36 CFR 63.

    Ida B. Wells Homes
    Francis Cabrini Homes
    Altgeld Gardens
    Jane Addams Houses
    Julia C. Lathrop Homes
    Trumbull Park Homes

CONSULTATION

2. If the Keeper determines that any of the 6 complexes referenced in stipulation 1, or any portions thereof, are eligible for inclusion in the National Register of Historic Places, HUD will consult further with IHPA and Council to develop an appropriate treatment plan for activities that might affect the integrity of said complexes.

LIFE, HEALTH AND SAFETY ACTIVITIES

3. CHA may proceed with all emergency activities as defined in its approved Comprehensive Grant program which relate to life, health and safety concerns which do not alter the exterior of the public housing complexes listed in stipulation 1. Exhibit A lists those activities. Exhibit A is attached hereto and incorporated herein.

ACTIVITIES AFFECTING EXTERIORS

4. Pending completion of treatment plans for complexes determined eligible for listing on the National Register, HUD will require that CHA consult with HUD and the IHPA to determine what action must be taken to obtain the comments of the Council, in accordance with 36 CFR 800, for any rehabilitation activities proposed for the exterior. This Agreement will be amended upon completion of said consultation to include the specifics of any interim plan.

TERMINATION OF AGREEMENT

5. Any party to the Programmatic Agreement may terminate it by providing thirty (30) days notice to the other parties, provided that HUD, the Illinois State Historic Preservation Officer and the Council will consult prior to termination to seek agreement on amendments or other actions that would avoid termination. In the event of termination, HUD will comply with 36 CFR Section 800.4 through 800.6 with regard to undertakings funded under the Comprehensive Grant Program which affect historic properties, unless HUD determines that compliance with Section 106 is no longer required for this program.

Execution and implementation of this Programmatic Agreement evidences that HUD has afforded the Council a reasonable opportunity to comment on the Chicago Housing Authority Comprehensive Grant program and that HUD has taken into account the affects of the program on historic preservation.

ADVISORY COUNCIL ON HISTORIC PRESERVATION
By: Robert D. Bush Date: 2/26/93

U. S. DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT
By: Date: 1/22/93

ILLINOIS HISTORIC PRESERVATION AGENCY
By: William L. Wheeler Date: 1-28-93

The Chicago Housing Authority has declined to be a concurring body to the Programmatic Memorandum of Agreement at this time.

EXHIBIT A

SPECIFIC ACTIVITIES, RELATING TO LIFE-SAFETY, THAT MAY PROCEED WITHOUT FURTHER CONSULTATION

1. Repair and/or replacement of all site infrastructure, such as water, sewer, wastewater, stormwater, steam, vehicular movement and parking areas, etc.

2. Repair and/or replacement of all site-wide facilities used to maintain safe operation of utilities, such as mechanical rooms, boiler room mechanical systems, etc.

3. Repair and/or replacement of all building mechanical and electric systems, such as heat distribution, elevators, electric lines and junction boxes, etc.

4. Repair and/or replacement of all interior building and architectural features, such as basements, halls, stairs, lobbies, vestibules, mail facilities, community rooms, offices, etc. This does not include exterior and/or roof repairs.

5. Repair of dwelling units, including finish items, kitchens, bathrooms, HVAC, electrical, etc.

6. Interior Lead Based Paint and Asbestos Abatement. This does not include abatement of any exterior areas.

7. Any activities ancillary to the above enumerated activities, such as administration, fees and costs, relocation, etc.

Keeper of the National Register

Date: 7/15/94

WASO-27

PROJECT NAME:	Chicago Housing Authority Properties: Julia C. Lathrop Houses; Trumbull Park Houses; Jane Addams Houses; Ida B. Wells Houses; Francis Cabrini Houses; Altgeld Gardens
LOCATION:	Cook County, Illinois
SUBMITTING AGENCY:	HUD/Chicago Housing Authority

The documentation submitted by the Chicago Housing Authority (CHA) and the State Historic Preservation Officer (SHPO) provides sufficient information to render an opinion that the six (6) properties referenced above are eligible for listing in the National Register of Historic Places. The properties appear eligible under National Register Criterion A in the areas of Community Planning and Development, and Social history. Erected between 1938 and 1945, the six housing complexes are historically significant for their association with this country's earliest efforts to provide large-scale public housing for the urban poor. The Addams, Altgeld Gardens, Cabrini, Lathrop, Trumbull, and Wells Houses represent the built response of governmental agencies--at the both the National and local levels--to the development of new policies for city planning and urban housing on a scale never before attempted.

While cognizant of the issues and concerns identified by the CHA in their report, the fact remains that when evaluated in light of the National Register criteria, these properties clearly reflect an important period in American urban history and reveal the prevalent attitudes toward public housing, city planning, and the plight of the poor associated with that period.

Contemporary photographs of the housing complexes reveal a substantial deterioration of the built fabric, however, the larger elements that help define the character of the complexes remain largely intact. These character-defining elements include the overall layout of the sites (the orientation of buildings to one another, to the open spaces, and to the immediate neighborhood); the Spartan design of the individual housing units, enlivened only by simple corbeling or roofline treatments; the unadorned rhythmic fenestration patterns; and the repetitive use of economic standardized floorplans. The rather austere designs that make the buildings seem so visually "unremarkable" today are in fact the architectural features that constitute important design principles within the context of period planning and design for low-income public housing. National Register eligibility is not a validation of the worth or appropriateness of those historic design or planning decisions, but rather an evaluation of their significance in representing the broad patterns of historic development in this country.

The projects are representative of what Chicago historian Carl W. Condit has called the "New Deal theory of public works." In the local context, the six housing projects provide valuable insight into the city's dynamic urban planning history and the economic and social ramifications of those significant planning decisions.

INDIVIDUAL RESOURCES

Jane Addams Houses:
Eligible under National Register Criterion A in the areas of Community Planning and Development and Social history, as the earliest and largest of Chicago's three PWA-built experimental demonstration projects. Completed in 1938, the rather austere housing project's two-, three-, and four-story units reflect the initial prototypical responses of architects John Armstrong, Melville Chatton, Earnest Grunsfield, Frederick Hodgdon, John Hollabird, Ralph Husjagh, Elmer Jensen, Philip Maher, John Merrill, and Chester Wolcott to the requirements of federally-subsidized urban housing for the poor. The layout, density, and architectural severity of the housing units is intact and represents the historic constraints of both federal design mandates and program funding during the period. The complex is a significant local example of America's emerging policies for publically-subsidized housing during the 1930s and 1940s.

Julia C. Lathrop Homes:
Eligible under National Register Criterion A in the areas of Community Planning & Development and Social history. The 1938 housing complex is a significant local example of the PWA's experimental demonstration projects for low-income public housing in Chicago. The relatively low-density (compared to later developments) housing project's two-, three-, and four-story units reflect the response of the architectural consortium known as the Diversey Housing Project Associated Architects [architects: Robert DeGolyer, Hugh Garden, Hubert Burnham, Vernon Watson, Thomas Tallmadge, Israel Loewenberg, E. E. Roberts, Roy Christiansen, Everett Quinn, Charles White, Bertram Weber, Edwin Clark, Earnest Mayo, and Peter Moro] to the severe constraints of limited funding and the mandated design practices associated with the federally-subsidized urban housing program. The complex is a significant local example of America's emerging policies for publically-subsidized housing during the 1930s and 1940s.

Trumbull Park Homes:
Eligible under National Register Criterion A, as an important early example of the experimental demonstration housing designed, built, and funded by the PWA for low-income tenants in Chicago. Completed in 1938, the housing project significantly impacted Depression-era Chicago through the creation of construction jobs; the removal of low-income tenants from substandard slum areas, and the creation of new affordable housing. The housing project's austere two- and four-story housing units contain International style design elements that reflect the programs' innovative approach to design and the contemporary perception of the program as advancing public thinking on housing and urban planning.

Ida B. Wells Homes:
Eligible under National Register Criterion A, as a significant early example of publically-funded urban housing in Chicago. Initially planned by the PWA under the Federal housing program, the complex was one of the first to be completed (1941) by the newly established Chicago Housing Authority. The 1662-unit complex was the largest of Chicago's pre-World War II public housing developments and represented an effort significantly more comprehensive than any previously undertaken in the city. The design included such innovative public amenities as

a community center building, a self-contained city park, and larger apartment units, which reflected a growing refinement of the city's public housing policies.

Francis Cabrini Homes:
Eligible under National Register Criterion A in the areas of Community Development and Planning and Social History. Completed in 1942, the housing complex represents Chicago's significant efforts to develop affordable public housing to meet the growing need for worker housing related to the city's pre-war industrial buildup. The Chicago Housing Authority's efforts at Cabrini served both the earlier demands for slum clearance, job creation, and affordable housing and the growing demands of America's military preparedness program. The individual units at Cabrini reflect a significant attempt to provide substantial housing and outdoor living space to each tenant within the confines of a dense urban development area.

Altgeld Gardens:
Eligible under National Register Criterion A in the areas of Community Development and Planning and Social History. Constructed between 1942 and 1945 for black workers in the Far South Side area, the housing complex represents Chicago's significant efforts to develop affordable public housing to meet the growing needs of the city's wartime industrial buildup. The Chicago Housing Authority's efforts at Altgeld Gardens served both the earlier demands for slum clearance, job creation, and affordable housing and the significant growing demands of America's military preparedness programs. Altgeld Gardens is also significant as one of the most self-contained of the early public housing developments in Chicago, containing a park, library, school, clubhouse, professional office building, and shopping center in addition to low-income housing units.

March 29, 2018

Lynn A. Crivello
Chicago Housing Authority
60 E. VanBuren St., 8th Floor
Chicago, IL 60605

Dear Ms. Crivello:

This letter revises the Illinois State Historic Preservation Office (SHPO) determination of effects for the undertaking submitted by the Chicago Housing Authority (CHA) on February 26, 2018. Based upon recent conversations and further consideration of effects, we are now making a determination of No Adverse Effect with Conditions for the proposed library and community Center in the National Register-eligible historic district of Altgeld Gardens.

Our review is required by Section 106 of the National Historic Preservation Act of 1966, as amended, and its implementing regulations, "Protection of Historic Properties" (36 CFR 800). Altgeld Gardens was previously determined eligible for listing in the National Register of Historic Places, under Criterion A for Community Planning and Development and under Criterion C for Architecture, on October 22, 1992 (IHPA Log # 01092192). The Stores Building, designed by the renowned architecture firm of Keck and Keck, was determined to be individually eligible for listing in the National Register of Historic Places on May 20, 2015 (IHPA Log # 001082213). Prior to that, in a letter written on January 17, 2014, our office had concurred with the Chicago Housing Authority (CHA)'s determination of eligibility of that same building (also called the Retail Building or Building 7).

In our first comment letter on this undertaking, dated March 23, 2017, for which we reviewed only a block diagram, we made an initial determination of no adverse effect, with conditions, stating that our office expected that the CHA and the City of Chicago's Fleet and Facility Management (2FM) would submit schematic design drawings and design development plans as they progressed. Then, in our letter of February 26, 2018, we wrote that the design and location of the new public library and community center constituted an adverse effect to Altgeld Gardens, in accordance with 36 CFR 800.5, as the fully developed and finalized plans for the project were for a building and landscape that were not compatible with the historic district and did not meet the Secretary of the Interior's Standards for the Rehabilitation of Historic Properties (Standards).

Further, we advised CHA to notify the Advisory Council on Historic Preservation (ACHP) of this finding to determine if they wished to join the consultation process. Lastly, we proposed mitigation measures to be considered for inclusion in a Memorandum of Agreement document that our office would prepare with other consulting parties.

After reconsidering the proposed design—including Koo Architecture's explanation of the design precedents in the curved façade of the Stores Building, which were intended for reference within the design of the new library, and changes to the landscape plan that will preserve more historic landscape features—the SHPO is revising its determination of this undertaking to No Adverse Effect to Altgeld Gardens, provided that the conditions listed below are accepted and met. Our office recognizes the significant community value of this project and wishes to help the CHA meet the impending deadline by which the general contractor must begin construction of the new building. Considering this urgency and after consultation with staff at the CHA, 2FM, the ACHP, the U.S. Department of Housing and Urban Development (HUD), and the Office of Governor Bruce Rauner, we recommend that we complete our Section 106 review of this undertaking by your concurrence with the determination that there is No Adverse Effect with the following conditions:

1. CHA will retain a qualified architectural historian to work with the community and with the SHPO staff, as needed, to prepare a nomination and list Altgeld Gardens in the National Register of Historic Places. The nomination should be completed and submitted to the SHPO for review by the Illinois Historic Sites Advisory Council (IHSAC) within twenty-four (24) months of this letter. The complex will be nominated as a historic district, with the Stores Building as a contributing resource therein, under the following criteria:
    a. Criterion A, considered at the local and national levels of significance, in the three areas of Community Planning and Development, Politics/Government, and Social History. As a complex designed and constructed by the federal government to provide housing for African-American veterans of World War II and their families, the roles of both local and federal government in its successful completion should be explored and documented within the nomination. The statement of significance should place Altgeld Gardens within the context of planning and design of that era's public housing. Further, the nomination will document Altgeld Gardens' role in the evolution of the environmental justice movement nationwide beginning in the late 1960s and early 1970s, which directly resulted in Environmental Justice Executive Order 12898, which President Bill Clinton signed on February 11, 1994, with Hazel Johnson attending at the White House in recognition of her achievements in forwarding the national discussion of environmental justice.
    b. Criterion B, considered at the local level of significance, for Altgeld Gardens' association with resident Hazel Johnson, widely recognized as a founder of the environmental justice movement of the mid- to late-twentieth century. Ms. Johnson and her organization, People for Community Recovery, worked to elevate awareness of the environmental and health hazards of asbestos and the need for its removal, which was bolstered with assistance from future senator and President Barack Obama, and their efforts received coverage in newspapers and magazines with nationwide distribution.

c. Criterion C, considered at the local level of significance, for Architecture. The statement of significance will place Altgeld Gardens within a national context for town planning, public housing, and modern architecture, but emphasize its comparison to designs within the City of Chicago.

Generally, the period of significance for the nomination will be 1944 through 1994, when the Executive Order 12898 was signed. The period of significance for Architecture will be 1944 through 1948, which reflects the date of design or construction through the Stores Building's appearance in the June 1948 issue of *Progressive Architecture*, a magazine with professional readership nationwide. The statement of significance that describes Hazel Johnson's work and Altgeld Gardens' role in the national movement for environmental justice will be prepared such that it will be clearly demonstrated that Altgeld Gardens easily meets Criterion Consideration G for resources that have achieved historic significance less than 50 years ago.

2. The revised landscape plan, Option 2, that was emailed to this office on March 8, 2018, by Kevin Parzych of Koo Architecture will be constructed as part of the undertaking. Our reply on March 19, 2018 to Koo and CHA staff stated our preference for Option 2, which preserves the greatest amount of significant features of the historic central plaza.

In addition, we request that CHA conduct training on the Section 106 process, within twelve (12) months of this letter, for relevant CHA and HUD staff and staff from other pertinent City and State agencies, including 2FM, the Illinois Housing Development Authority (IHDA), and the Illinois SHPO. We trust that you will make scheduling this training a priority, and we will be pleased to participate.

Please indicate your concurrence with this No Adverse Effect determination and stated conditions by signing on the lines below, and return the signed letter to our office. If you have questions, please contact me at (217) 785-5031, or at rachel.leibowitz@illinois.gov.

Sincerely,

Rachel Leibowitz, Ph.D.

RE: **Altgeld Gardens - Phillip Murray Homes Historic District**
Roughly Bound by E. 130th Place, Leanna Tucker Avenue,
E. 133rd Place, and S. St. Lawrence Avenue (see attached map)
Chicago -- Cook County

Dear Ms. Barnhart:

Thank you for requesting an assessment of the above property's eligibility for nomination to the National Register of Historic Places. After reviewing the material you submitted, we are of the opinion that the district is still eligible for listing. Please refer to the attached eligibility assessment sheet for further details.

Submission requirements and other helpful information about the nomination process here in Illinois is located at our website:
http://www.illinois.gov/ihpa/Preserve/Pages/Places.aspx

Please feel free to contact me at 217/782-8588 if you have any questions, and I would be happy to assist you.

Sincerely,

Amy Hathaway

National Register Eligibility Assessment Sheet

Preservation Services Division
State Historic Preservation Office – Springfield, IL

Property: Altgeld Gardens - Phillip Murray Homes Historic District

Location: Roughly Bound by E. 130th Place, Leanna Tucker Avenue,
E. 133rd Place, and S. St. Lawrence Avenue
Chicago -- Cook County

Date: May 15, 2020

The above property appears to meet the following National Register Criteria:
(x) **Criteria A:** Property is associated with events that have made a significant contribution to the broad patterns of history.

( ) **Criteria B:** Property is associated with the lives of persons significant in our past.

( ) **Criteria C:** Property embodies the distinctive characteristics of a type, period or method of construction or represents the work of a master, or possesses high artistic values, or represents a distinguishable entity whose components lack individual distinction.

( ) **Criteria D:** Property has yielded or is likely to yield information important to prehistory or history.

Areas of Significance
Social History
Community Planning & Development

Additional Comments
The district appears to retain enough integrity and is locally significant for community planning & development and for its social history. The period of significance is from 1943, the initial date of construction, until 1972, the date the Community Center was built.

This eligibility assessment is provided to assist in determining whether to pursue National Register Listing. It is not a guarantee of eventual National Register Listing

To: Carolyn Andrews
Subject: RE: Altgeld Gardens-Philip Murray Homes

Good morning!

I would say it was a determination of eligibility from Review and Compliance.

Thanks Amy!

Do you see this as equivalent to a determination of eligibility?
I'm trying to decide if we need to present an argument for eligibility under these Criteria in our report as well.

Have a nice evening,

Hello Amy,

I was hoping you could confirm if Altgeld Gardens-Philip Murray Homes has been determined eligible for listing under Criteria B & C. I understand the nomination is still underway and have seen a directive from the SHPO in 2018 that suggest these criteria being applicable.
We are completing an eligibility report for the Red Line Extension project and want to make sure we have all our facts straight!

Thanks again,

Carri Andrews, RA

Hello Carri,

I'm actually not sure which Criteria are included in SHPO's official determination of eligibility, since as you mentioned there exists more than one document referencing this subject. I do know that MacRostie Historic Advisors will have to research and document how the district meets Criteria A, B, and C in the first draft of the National Register nomination.

I think it would be best to touch base with Amy Hathaway at the Illinois SHPO and ask her to clarify which Criteria the district has officially been determined eligible for at this time. Email is probably the best way to reach her: Amy.Hathaway@Illinois.gov.

I wish I could be of more help!

Best,

Rachel Barnhart

Subject: Altgeld Gardens-Philip Murray Homes

Hello Rachel,

I'm sorting through the information you sent to us regarding the SHPO evaluations of significance and other correspondence for Altgeld Gardens. We are trying to determine if the proposed district has been determined eligible for Criteria B and C, or if these criteria are only under consideration at this time. It's not clear to me if the directive from the SHPO in 2018 is a recognition of these criteria being applicable. It does look like we had official correspondence confirming eligibility under A.
Are you able to shed any light on this?

Would be happy to have a phone conversation on this tomorrow if that works better for you.

Thanks again,

Carri Andrews, RA

Meeting Minutes – Consulting Party Meeting #1, February 18, 2021

Meeting Minutes

Project: **Red Line Extension**
Meeting Purpose: **Consulting Party Meeting 1**
Date: **Thursday, February 18, 2021**
Location: **Remote Meeting**
Time: **1:00 PM**

Chairperson: **Marlise Fratinardo**

Attendees: (See Attached copy of Sign-in-Sheet)

Item No.	*Date*	*Item Description*	*Responsibility/ Status*	*Due/Closed Date*
1.00	**General**			
1.01	2/18/21	A PowerPoint presentation was used for the meeting. Presenters included Marlise Fratinardo, Meg Kindelin, and Carri Andrews.		
1.02	2/18/21	The goal of Section 106 is to determine the project effects on historic properties and is required for projects with federal funding. As part of Section 106, feedback is solicited from Consulting Parties. Impacts to historic properties potentially affected by the project are assessed and mitigations for adverse effects will be determined.		
1.03	2/18/21	The Draft Eligibility Report was provided in advance of the meeting to all Consulting Parties (CPs), and written comments are requested by 3/12/21. CP feedback will be incorporated into the project's Section 106 process that will be included in the Supplemental Environmental Assessment (EA) and Final Environmental Impact Statement (EIS).		
1.04	2/18/21	The purpose of this meeting was to review the project and focus on the Section 106 Draft Eligibility Report.		
2.00	**Project Overview**			
2.01	2/18/21	The Red Line Extension (RLE) will extend from the existing 95th Terminal Station to 130th St. There will be four new stations and a new rail yard and shop.		
2.02	2/18/21	One of the primary project benefits is equity, bringing affordable rapid transit to historically underserved communities. Other benefits include economic opportunity, frequent rail service and sustainability.		
2.03	2/18/21	An Alternatives Analysis considered multiple options including rail and bus rapid transit alternatives. Based on additional technical analysis and public input received, the rail line running along the UPRR track was selected. Options to the East and West of the UPRR track were considered, and the Preferred Alignment a combination of the East and West Options that minimizes impacts, was announced in 2018.		
2.04	2/18/21	The tracks will be on an elevated structure from 95th Station to 119th St, then will continue at grade from 119th St to the 130th Terminal Station.		
2.05	2/18/21	Section 106 consultation was initiated, historic properties were identified, and adverse effects were assessed in the Draft EIS. Because no adverse effects were found, no resolution of adverse effects was needed. However, with changes to the Project following the Draft EIS publication, the findings are being reevaluated, and the results of the Phase 1 Archeological Survey will be presented at this meeting.		

2.06	2/18/21	In the Draft EIS, the identification of historic properties was performed on the project's Area of Potential Effects (APE), which was generally one block from the centerline of tracks and widened at station areas. National Register of Historic Places (NRHP) evaluations were performed to determine eligible properties on a representative sample of buildings in the APE. Each block was examined for historic character, and sample properties were chosen for their ability to represent the characteristics of each block. Field surveys were performed to assess the conditions. For the Draft EIS, a total of 280 properties were field surveyed, and 7 properties were recommended as eligible for NRHP.		
2.07	2/18/21	For the UPRR East and West Options presented in the Draft EIS, no adverse effects were found on the historic properties. Therefore, mitigations were not required.		
3.00	**Section 106 Updates**			
3.01	2/18/21	This meeting serves to initiate consultation of the CPs regarding the process and identification of areas with potential cultural or religious significance.		
3.02	2/18/21	The four new RLE stations will be at 103rd St, 111th St, Michigan Ave, and 130th St. The rail yard and shop will be near 120th St. Although the alignment at the 108th Pl has changed from what was shown in the Draft EIS, there has been no change to the APE. The APE has been modified to accommodate changes to the Yard and Shop area but no historic properties or cultural material was found within, and the Michigan Station and 130th Station APEs have been expanded.		
3.03	2/18/21	In the Draft EIS, the Michigan Station parking was shown South of the UPRR. There is an opportunity to relocate the Michigan Station parking North of the UPRR. This new location is being vetted through the NEPA process, and DPD is in the process of acquiring the land. Station components will include a stationhouse, primary and secondary entrances and a parking garage up to four stories tall, and the layout of these components is under development. The APE was expanded to the North and South based on building density and visual observation to account for the new potential station parking location and to address potential effects in this area.		
3.04	2/18/21	In the Draft EIS, 130th Station was located North of 130th St, adjacent to MWRD water treatment facilities. This provided a more difficult path of travel and is a more isolated location for future amenities. The location South of 130th St would be closer to residents and would provide more opportunities for future development. This new location is being vetted through the NEPA process. The APE was expanded in consideration of the building density, height of proposed work, changes to traffic patterns, and potential changes to the noise and vibration environment.		
3.05	2/18/21	The identification of historic properties was performed at areas of APE expansion. Five properties were identified near the Michigan Station to have Chicago Historic Resources Survey (CHRS) Orange ratings, meaning they have historical features or historical associations potentially significant to the community. The Altgeld Gardens-Philip Murray Homes Historic District has been determined eligible under Criteria A, B and C from the CHA nomination for the NRHP. One other historic-age property near 130th Station was identified.		
3.06	2/18/21	A representative sample of 15 properties was chosen and evaluated, and six were recommended as eligible. Nine historic-age properties were recommended as not eligible due to the lack of distinguishing historical features and no association with historical people or events.		
3.07	2/18/21	An overview of each of the six recommended properties was presented.		

3.08	2/18/21	Part of the Section 106 process is a study of the archeological resources that may be affected. A Phase 1 Archaeological Reconnaissance Survey was performed along the Preferred Alignment. The terrain was substantially disturbed, and photographic recordation and shovel test probes (STP) were conducted. Based on the findings and a records check with the state database, it was determined that no identified archaeological sites or resources would be affected during construction.		
4.00	**General Discussion**			
4.01	2/18/21	Each Consulting Party was called on in alphabetical order to be given an opportunity to comment.		
4.02	2/18/21	The People for Community Recovery (PCR) requested information on the layout of the future station, and CTA will follow up after the meeting.	CTA	
4.03	2/18/21	By the Hand Club liked the proposal of 130th Station to be located closer to Altgeld Gardens, noting that this provides better access to the community.		
4.04	2/18/21	By the Hand Club inquired about the project timeline, and CTA noted that the entry to Project Development (PD) was announced in December 2020, construction is targeted to begin in 2025, and revenue service is targeted to begin in 2029.		
4.05	2/18/21	CHA noted that their main concerns are for the best interest of the residents, including access to jobs and safety. CHA would be interested in more details of the station layout.		
4.06	2/18/21	CPD did not have any comments at this time.		
4.07	2/18/21	The Greater Roseland Chamber of Commerce requested clarification on the location of the proposed Michigan Station parking. CTA discussed the two options being considered and confirmed that a portion of the parcels to the North of Michigan Station are being considered for potential development through the Transit Supportive Development (TSD) Study.		
4.08	2/18/21	The Greater Roseland Chamber of Commerce expressed interest in improvements to the properties being recommended for historic preservation and inquired if funding (programs) were available.		
4.09	2/18/21	The Historic Preservation Division of DPD did not have any comments at this time.		
4.10	2/18/21	Illinois SHPO did not have any comments at this time.		
4.11	2/18/21	Landmarks Illinois noted the importance of coordination between organizations for improvements to the Roseland neighborhood, and it was noted that coordination is being done.		
4.12	2/18/21	The Neighborhood Housing Services of Chicago did not have any comments at this time.		
4.13	2/18/21	PCR expressed support for the project to bring transit to the Altgeld Gardens community but expressed interest in understanding other community benefits that would result from the land transferred for the new 130th Station. CTA is aware of community interest in development within the community, is working on setting up an implementation plan, and can follow up with PCR on community requests. PCR noted that future redevelopment opportunities would be improved with the introduction of a transit station in the Altgeld Gardens neighborhood.	CTA	
4.14	2/18/21	Preservation Chicago expressed interest in seeing the Michigan Station and 130th Station renderings.		
4.15	2/18/21	Preservation Chicago requested a status update on the NRHP nomination of Altgeld Gardens and will follow up with CHA.		
4.16	2/18/21	Preservation Chicago preferred the Michigan Station to be located on the North side of the UPRR tracks and expressed interest in housing development in this area.		
4.17	2/18/21	Preservation Chicago inquired about the roadway improvements near historic properties near Michigan Station, and CTA will follow up.	CTA	
4.18	2/18/21	The Pullman Civic Organization had no comments at this time.		

4.19	2/18/21	The RLE Coalition expressed support for the furniture store, Carver Military Academy and Altgeld Gardens to be recommended as historic properties.		
4.20	2/18/21	The RLE Coalition believed that the North location of Michigan Station would be preferable for parking and TOD. Suggestions for development included a bank, pharmacy, grocery store or entertainment center.		
4.21	2/18/21	The RLE Coalition expressed interest in using the space South of Kensington and East of Michigan for a park or green space, and CTA noted that this will be part of the Section 4(f) process to determine replacement park options with CPD.		
4.22	2/18/21	The RLE Coalition supported the new 130th Station location due to improved access and walkability and suggested that a bank and grocery store are desired in this area.		
4.23	2/18/21	The RLE Coalition noted that the community would be interested in businesses that would benefit and participate in the community and retain money within the community. The Greater Roseland Chamber of Commerce noted that this would be a community initiative. CTA noted that this would be discussed in the TSD plan.		
4.24	2/18/21	The RLE Coalition also suggested branding of the area and 130th station to reflect the history.		
4.25	2/18/21	The Rosemoor Community Association noted that the community supports the project.		
4.26	2/18/21	TCA Health expressed support for the project and excitement for the community benefits.		
4.27	2/18/21	TCA Health inquired about the roadway improvements near historic properties at Altgeld Gardens, and CTA will follow up.	CTA	
4.28	2/18/21	The Chicago Neighborhood Initiatives was excited about the project and expressed interest in development opportunities at 115th and Michigan. The Chicago Neighborhood Initiatives suggested that the National Park Service may be appropriate to add as a CP although there may be a conflict of interest due to their review of the Section 106 documents. CTA will review.	CTA	
5.00	**Next Steps**			
5.01	2/18/21	The deadline for submission of written comments is 3/12/21. Comment responses and meeting minutes will be issued in April 2021.		
5.02	2/18/21	The next CP Meeting will review the Effects Report and is targeted for June 2021.		
5.03	2/18/21	Input received will be summarized in the environmental documents that will be publicly available.		
5.04	2/18/21	Presentation slides and the Section 106 terms document will be provided to participants.	CTA	
Please notify the author of the minutes of any corrections and/or clarifications within five (5) business days, otherwise minutes will be considered final.

Consulting Party Meeting #1 Comments and Responses,

April 9, 2021

Consulting Party Comments and Responses

This document addresses comments received from consulting parties regarding the Red Line Extension (RLE) Project Draft Eligibility Report (dated February 2021). Based on the selection of the Preferred Alignment and other design refinements, the Chicago Transit Authority (CTA) undertook data collection and analysis to make recommendations regarding the Project's Area of Potential Effect (APE) and identification of historic resources under Section 106 of the National Historic Preservation Act (NHPA). The resulting Draft Eligibility Report served as a summary of and update to the Section 106 consultation, which began in 2012, for the RLE Draft Environmental Impact Statement (Draft EIS). The 2021 Draft Eligibility Report was presented to the consulting parties, including the Illinois State Historic Preservation Office (SHPO), during a consulting party meeting on February 18, 2021. Comments collected during the consulting party meeting were recorded in meeting minutes. Items from the meeting that required response pertained to matters outside historic properties and Section 106 review and have been addressed separately. Written comments were received from the following organizations:

- Robert F. Appleman, Illinois SHPO
- Ward Miller, Preservation Chicago
- Daniel Klaiber, Chicago Department of Planning and Development, Historic Preservation Division
- Lisa DiChiera, Landmarks Illinois
- Diane Hunter Miami Tribe of Oklahoma

Landmarks Illinois and Miami Tribe of Oklahoma responded that they have no comments at this time. Other written comments and corresponding responses provided by the CTA are recorded below. Copies of the comments received are attached to the end of this summary.

Illinois SHPO

Comment: *We concur with the Federal Transit Administration (FTA) that the 6 additional properties in the expanded APE in Table 2 of the FTA's February 11, 2021 letter are eligible for the National Register of Historic Places. On page 14 of the survey, 11451 S. Michigan Ave is circled as "N" (no) for eligibility, which is an error.*

Response: Noted. The Eligibility Report will be revised to correct the error noted above.

Comment: *Because the Red Line will now extend south of 130th Street, Altgeld Gardens will now be effected by this Undertaking. Therefore, our 2017 concurrence that Altgeld Gardens will not be adversely effected by this Undertaking is rescinded. We will continue to review the undertaking for its effects on Altgeld Gardens.*

Response: Noted. New recommendations concerning effects at Altgeld Gardens-Philip Murray Homes will be presented for review in the Effects Report.

Comment: *We concur that there are no historic archaeological resources within the original and expanded APE.*

Response: Noted. The current RLE Archeological Report will be considered complete and final.

Preservation Chicago

Comment: *The new Michigan Avenue Station at 115th Street be located on the north side of the proposed track-line to reduce demolition of houses and buildings and place the station and parking facility on vacant land. So, this CTA station and multi-story parking lot would be located at the southwest corner of 115th and South Michigan Avenue on current vacant land. We are hoping that the base of the parking lot could hold retail and stores, and perhaps some green spaces.*

Response: The CTA is investigating options for parking and bus facilities for the Michigan Avenue station on both the north and south sides of the Union Pacific tracks. The development project that was planned for the vacant site on the north side of the tracks has not moved forward and has presented an opportunity to potentially locate the parking and bus facilities to this site. The Chicago Department of Planning and Development (DPD) is in the process of acquiring this land from the developer and the CTA is coordinating with DPD on this effort.

The use of space within the parking lot and parking garage at the Michigan Avenue station are still under development. The CTA is currently conducting the RLE Transit-Supportive Development (TSD) Plan which, along with the community input collected as a part of that plan, will assist in identifying appropriate uses for the available space.

Comment: *The historic buildings at 115th and Michigan and extending northward should be reinvested-in as part of the larger efforts to reinvest in the area. This could include the gold and crème terra cotta building at the northeast corner of 115th and Michigan Avenue, as well as other nearby structures, including buildings along Kensington Avenue, like the historic "Venetian Hall Building."*

Response: The CTA understands that these are historic properties and values them as such. It is not within the CTA's scope for the RLE Project to reinvest in these properties.

Comment: *Please clarify why the historic public school in the APE-the Area of Potential Effect, is not eligible for the National Register of Historic Places?*

Response: Additional research has uncovered historical information for George William Curtis Public School supporting eligibility under Criterion C for Architecture. This information will be included in the final Eligibility Report and the property is recommended as Eligible for NRHP.

Comment: *Would the CTA consider honoring Hazel Johnson, and her work on Environmental Justice (130th Street is also named in her honor), along with her work with former President Obama and the African-American World War II Servicemen at the 130th Street terminal at Altgeld Gardens Terminus? Altgeld Gardens was built specifically for returning African American Servicemen, and that would be a wonderful tribute to their sacrifices and also to Hazel Johnson.*

Response: The CTA recognizes the rich local history of the nearby neighborhoods and residents, including the contributions of Hazel Johnson. The CTA is open to work with the community and its leaders to consider suggestions for naming the stations.

Chicago Department of Planning and Development, Historic Preservation Division

Comment: *Our comment that we would like to add for the record is that DPD is in the midst of completing a historic assessment of a portion of Michigan Avenue in Roseland that overlaps with the Section 106 APE. The study, officially called Historic Research and Report for the Michigan Avenue Business District in the Roseland Community Area is focusing on the social, economic, business and architectural/building history of Michigan Avenue, especially in a core area from 110th Street to 115th Street. With input from various community stakeholders, DPD intends that the study will be used to help lay the groundwork for further planning initiatives on Michigan Avenue that will capitalize on the area's history.*

Response: Noted. The CTA is interested in reviewing this study once completed.

Dear Mr. Ciavarella:

We have reviewed the Revised Area of Potential Effect (APE), Eligibility Report and Consulting Parties List for the above referenced project. Our comments are required by Section 106 of the National Historic Preservation Act of 1966, as amended, and its implementing regulations, 36 CFR 800: "Protection of Historic Properties."

We concur with the Federal Transit Administration (FTA) that the 6 additional properties in the expended APE in Table 2 of the FTA's February 11, 2021 letter are eligible for the National Register of Historic Places. On page 14 of the survey, 11451 S. Michigan Ave is circled "N" (no) for eligibility, which is an error.

Because the Red Line will now extend south of 130th Street, Altgeld Gardens will now be effected by this Undertaking. Therefore, our 2017 concurrence that Altgeld Gardens will not be adversely effected by this Undertaking is rescinded. We will continue to review the undertaking for its effects on Altgeld Gardens.

We concur that there are no historic archaeological resources within the original and expanded APE.

Please contact CJ Wallace, Cultural Resources Coordinator, at 217/785-5027 with any questions.

Sincerely,

Robert F. Appleman
Deputy State Historic
Preservation Officer

Dear Marlise Fratinardo,

Thank you for you presentation and the opportunity to comment on the Red Line Extension Project of the CTA. We are very excited about this extended Red Line project to 130th Street, which will serve so many residents in many Far South Side Communities of Chicago. Kudos!

Our comments and concerns are limited to the following points at this time.

1. The new Michigan Avenue Station at 115th Street be located on the north side of the proposed track-line to reduce demolition of houses and buildings and place the station and parking facility on vacant land. So, this CTA station and multi-story parking lot would be located at the southwest corner of 115th and South Michigan

Avenue on current vacant land. We are hoping that the base of the parking lot could hold retail and stores, and perhaps some green spaces.

2. The historic buildings at 115th and Michigan and extending northward should be reinvested-in as part of the larger efforts to reinvest in the area. This could include the gold and crème terra cotta building at the northeast corner of 115th and Michigan Avenue, as well as other nearby structures, including buildings along Kensington Avenue, like the historic "Venetian Hall Building."

3. Please clarify why the historic public school in the APE-the Area of Potential Effect, is not eligible for the National Register of Historic Places?

4. Would the CTA consider honoring Hazel Johnson, and her work on Environmental Justice (130th Street is also named in her honor), along with her work with former President Obama and the African-American World War II Servicemen at the 130th Street terminal at Altgeld Gardens Terminus? Altgeld Gardens was built specifically for returning African American Servicemen, and that would be a wonderful tribute to their sacrifices and also to Hazel Johnson.

Thanks so much for your consideration of these important points and observations.

Sincerely,
Ward Miller

Hello Marlise: Thank you for providing DPD an overview of the Section 106 Review Process (#2) for the Red Line Extension Project.

Our comment that we would like to add for the record is that DPD is in the midst of completing a historic assessment of a portion of Michigan Avenue in Roseland that overlaps with the Section 106 APE. The study, officially called *Historic Research and Report for the Michigan Avenue Business District in the Roseland Community Area* is focusing on the social, economic, business and architectural/building history of Michigan Avenue, especially in a core area from 110th Street to 115th Street. With input from various community stakeholders, DPD intends that the study will be used to help lay the groundwork for further planning initiatives on Michigan Avenue that will capitalize on the area's history.

Thank you, Dan Klaiber

Re: CTA Red Line Extension – Comments of the Miami Tribe of Oklahoma

Dear Ms. Fratinardo:

Aya, kikwehsitoole – I show you respect. The Miami Tribe of Oklahoma, a federally recognized Indian tribe with a Constitution ratified in 1939 under the Oklahoma Indian Welfare Act of 1936, respectfully submits the following comments regarding the CTA Red Line Extension.

The Miami Tribe offers no objection to the above-referenced project at this time, as we are not currently aware of existing documentation directly linking a specific Miami cultural or historic site to the project site. However, given the Miami Tribe's deep and enduring relationship to its historic lands and cultural property within present-day Illinois and specifically in the Chicago area, if any human remains or Native American cultural items falling under the Native American Graves Protection and Repatriation Act (NAGPRA) or archaeological evidence is discovered during any phase of this project, the Miami Tribe requests immediate consultation with the entity of jurisdiction for the location of discovery. In such a case, please contact me at 918-541-8966 or by email at dhunter@miamination.com to initiate consultation.

The Miami Tribe accepts the invitation to serve as a consulting party to the proposed project. In my capacity as Tribal Historic Preservation Officer, I am the point of contact for consultation.

Respectfully,

Diane Hunter

Table 1-1: Draft EIS Findings for NRHP-Eligible Properties in the APE - Union Pacific Railroad Alternative East and West Options 2
Table 2-1: Historic Properties Identified in Project APE 6
Table 3-1: Summary of Effects on Historic Properties in the Project APE 12

Section 1 - Executive Summary

Section 106 of the National Historic Preservation Act (NHPA) requires federal agencies to consider effects on historic properties from their actions. As stated in 36 CFR § 800, the Section 106 process "seeks to accommodate historic preservation concerns with the needs of Federal undertakings through consultation" (36 CFR § 800.1(a)). The process is designed to identify historic properties which may be affected by the undertaking, assess effects, and seek ways to avoid, minimize, or mitigate any adverse effects on historic properties. The Federal Transit Administration (FTA) is serving as the lead federal agency for the Red Line Extension (RLE) Project and is responsible for Section 106 compliance.

This document summarizes information previously provided on historic and cultural resources affected by the RLE Project and Section 106 consultation conducted to date. Such information can be found in the RLE Draft Environmental Impact Statement (EIS) and is summarized in the *Eligibility and Effects Summary Report* (CTA 2016) included in **Appendix B**. The Chicago Transit Authority (CTA) selected a Preferred Alignment after Section 106 consultation had been completed (in 2017). The purpose of this document is to continue consultation with the State Historic Preservation Office (SHPO) and other identified Consulting Parties on refined project elements presented in the June 2021 *RLE Section 106 Eligibility Report* (CTA 2021, **Appendix A**) that result in an updated assessment of effects. This Effects Report reviews and updates findings from the Draft EIS and presents an assessment of effects for each historic property located within the expanded Area of Potential Effect (APE).

1.1 Draft EIS

Following identification of historic properties and in consultation with the SHPO and Consulting Parties, FTA and CTA assessed effects for each property that was listed in the National Register of Historic Places (NRHP) or determined eligible for listing. The effects assessment completed for the Draft EIS in 2016 included review of specific direct and indirect impacts resulting from specific project elements to determine if they might alter the characteristics that qualify properties for inclusion in the NRHP. Results of the 2016 effects assessment are summarized in **Table 1-1**.

Table 1-1: Draft EIS Findings for NRHP-Eligible Properties in the APE - Union Pacific Railroad Alternative East and West Options

Map ID	Address	Description	Union Pacific Railroad Alternative East Option Effects Finding	Union Pacific Railroad Alternative West Option Effects Finding
1	444 W. 100th Place	Eclectic Neo-Traditional Home	No Historic Properties Affected	No Historic Properties Affected
2	324 W. 104th Street	Fire Department Engine Company 93	No Historic Properties Affected	No Historic Properties Affected
3	351 W. 104th Street	Roseland Pumping Station	No Adverse Effect	No Historic Properties Affected
4	10920 S. Princeton Avenue	Romanesque Revival-Style Church	No Historic Properties Affected	No Historic Properties Affected
5	11321 S. Wentworth Avenue	Roseland Community Hospital Nurses Home	No Historic Properties Affected	No Historic Properties Affected
6	133-139 E. Kensington Avenue	Former Venetian Hall	No Historic Properties Affected	No Historic Properties Affected
21	Multiple	Altgeld Gardens Historic District	No Historic Properties Affected	No Historic Properties Affected

1.2 Preferred Alignment

Project changes and refinements associated with the selection of the Preferred Alignment require review and update of effects on the historic properties identified in the Draft EIS. It has also resulted in expansion of the APE in two locations. Details are presented in the *RLE Section 106 Eligibility Report* (CTA 2021, **Appendix A**). Sixty previously identified historic properties, including one historic district, were found within the expanded APE. In addition to the six historic properties recommended eligible in the Draft EIS, seven properties within the expanded APE were recommended as eligible for listing in the NRHP. In total, 73 historic properties exist within the Draft EIS APE and the expanded APE (hereafter referred to as the project APE).

1.3 Effects Findings

Based on the proposed design of the Preferred Alignment, the project would have no adverse effect on the 73 historic properties within the project APE. This assumes incorporation of design parameters defined by the SHPO at 130th Street station for a finding of no adverse effect. As stated in a letter provided by the SHPO on August 10, 2021, these parameters include:

- A parking garage of 4-stories or less.
- Option to use existing 130th Place as the station entrance. The SHPO accepts this option would eliminate on-street parking on Greenwood Avenue for one block between Ellis Avenue and 130th Place.
- Option to place the entrance to the station at the historic curb cut into the original parking lot in Block 11 and creates 132nd Place. Doing so would result in the elimination of two blocks of historically appropriate on-street parking along the east side of Greenwood Avenue and bring traffic deeper (further south) into Altgeld Gardens-Phillip Murray Homes (AGPMH). The SHPO would accept this option as meeting the Secretary of the Interior's Standards and not adversely affecting AGPMH if residents of AGPMH are also in favor.

These design parameters were the result of a meeting between FTA, CTA, and SHPO on July 26, 2021. The meeting presentation, additional renderings, meeting minutes, and SHPO review letter are included in this document as **Appendix D**.

Section 2 - Project Summary

2.1 Project Description

The RLE Project would extend the Red Line from the existing 95th/Dan Ryan terminal to 130th Street. The proposed 5.6-mile extension would be elevated from 95th to 119th Streets, at-grade south of 119th Street to 130th Street, and would include four new stations near 103rd Street, 111th Street, Michigan Avenue, and 130th Street. Each new station would include bus connections and parking facilities. The RLE Project would also provide a modern, efficient car storage yard and shop facility near 120th Street.

The Preferred Alignment, selected in 2018 after publication of the Draft EIS, is a hybrid of the Union Pacific Railroad (UPRR) Alternative East and West Options presented in the Draft EIS. North of 108th Place, the Preferred Alignment follows the UPRR West Option and then south of 108th Place it follows the UPRR East Option to 119th Street. South of 119th Street the UPRR East and West Options were on the same alignment to the terminus of the RLE Project north of 130th Street. The Preferred Alignment would continue along this same alignment to 130th Street but terminate on the south side of 130th Street.

A detailed description of the current conceptual level design is included in the *RLE Section 106 Eligibility Report* (CTA 2021, **Appendix A**). Conceptual level renderings are included in **Section 3**.

2.2 Area of Potential Effects

The APE is defined as “the geographic area or areas within which an undertaking may directly or indirectly cause alterations in the character or use of historic properties, if any such properties exist” (36 CFR 800.16.d). The APE developed for the Draft EIS of the RLE Project was delineated after considering the location of the proposed alternative options; the potential for ground disturbance, demolition, or property taking; locations from which the undertaking may be visible and/or audible; and the scale and setting of the project. This APE was developed in consultation with CTA, FTA, and SHPO.

The APE developed for the Draft EIS contains parcels within one block of the centerline of the UPRR Alternative and widens to accommodate the locations of each park & ride and the proposed yard and shop beyond the one-block boundary. This APE included both the UPRR East Option and West Option. Project changes and refinements associated with the Preferred Alignment have resulted in expansion of the APE in two locations:

- Michigan Avenue Station Refinement

  Two locations for the station parking garage are being considered. The locations are to the north and to the south of the UPRR. The Draft EIS Section 106 APE had only included the south option and now the APE is expanding to include the north option. The selection of the station parking garage location is dependent on confirmation of availability of parcels and future coordination with the City of Chicago. The APE has been expanded one block to the north and east to include the north option. The APE has also been expanded to one full block in the south and west to adequately address potential effects in these areas. See **Figure 3-2**.

- 130th Street Station Relocation

  Following relocation of the 130th Street station south of 130th Street, the APE has been expanded to include the full site under consideration for construction and an approximate buffer of a quarter mile, except at visual obstructions where it is slightly truncated. This area is based on building density, height of the proposed work, visual observations on site, intended to encompass changes in traffic, noise, and vibration, caused by the project. See **Figure 3-3**.

2.3 Identification of Historic Properties

In total, 73 historic properties have been identified in the APE for the RLE Project This includes one historic district and the 59 residences and other buildings contributing to that district. These properties are listed in **Table 2-1** below. See **Figures 2-1**, **2-2**, and **2-3** for maps of these historic properties.

The Illinois SHPO has reviewed and concurred with eligibility recommendations for properties #1 through #11 and #13. Property #12, George William Curtis Public School at 11445 S. State Street, was reevaluated for eligibility due to a Consulting Party request and is recommended by CTA as eligible for listing in NRHP under criterion C for architecture and association with Chicago Board of Education Architect W. August Fiedler. See the updated evaluation form for this historic property in **Appendix C**. In a letter dated July 9, 2021, the Illinois SHPO concurred with this recommendation for eligibility and stated that Roseland Pumping Station, Scanlan Elementary School, George William Curtis Public School, and Carver Military Academy High School be considered eligible under Criterion A as well as Criterion C at the local level of significance. This report has been updated accordingly. Note that properties #14 through #20 are contributing resources in the Altgeld Gardens-Philip Murray Homes Historic District. Their NRHP status had already been confirmed by the SHPO, initially on October 22, 1992, under Criterion A for Community Planning and Development, and updated on March 29, 2018 under the following Criteria:

- Criterion A for Community Planning and Development, Politics/Government, and Social History
- Criterion B for association with resident Hazel Johnson, widely recognized as a founder of the environmental justice movement of the mid- to late-twentieth century. Her organization, People for Community Recovery, worked to enhance the quality of life of residents living in communities affected by environmental pollution.
- Criterion C for Architecture including town planning, public housing, and modern architecture.

Section 3 - Assessment of Effects on Historic Properties

3.1 Summary of Effects

The NHPA implementing regulations established criteria to evaluate whether an undertaking will have an adverse effect on historic properties. An adverse effect occurs when an undertaking “may alter, directly or indirectly, any of the characteristics of a historic property that qualify the property for inclusion in the National Register in a manner that would diminish the integrity of the property's location, design, setting, materials, workmanship, feeling, or association” (36 CFR 800.5.a). Therefore, an adverse effect finding will be applied to any historic property that would be subject to one or more of the following criteria listed below, but not limited to (36 CFR 800.5.a.2):

i. Physical destruction or damage to all or part of the historic property.

ii. Alteration that is inconsistent with the Secretary of the Interior’s Standards for the Treatment of Historic Properties.

iii. Removal of the property from its historic location.

iv. Introduction of visual, atmospheric, or audible elements that diminish the integrity of the property's significant features.

v. Change to the character of the property’s use or the physical features within the property’s setting that contribute to its significance.

vi. Neglect of a property that causes deterioration.

vii. Transfer, lease, or sale of property out of federal ownership or control without adequate and legally enforceable restrictions or conditions to ensure long-term preservation.

Effects can be direct, indirect, or cumulative. If an adverse effect is found, the FTA would consult with the Illinois SHPO and other Consulting Parties to develop and evaluate alternatives or modifications to the undertaking that could avoid, minimize, or mitigate adverse effects on the historic property (36 CFR 800.6.a). For the Draft EIS, the FTA and CTA, in consultation with the Illinois SHPO and other Consulting Parties, found no adverse effect for the project and resolution of adverse effects was not required. Individual findings of effect for each historic property from the Draft EIS, including evaluations of “no effect” and “no adverse effect” are summarized in **Table 1-1.**

Under the National Environmental Policy Act of 1969 (NEPA), visual impact assessment of a proposed undertaking includes consideration of scenic resources and scenic experiences of the people who view the landscape. Impacts include any modification of landforms or introduction of structures or other visual elements that negatively or positively affect the visual character of the landscape and the visual experience of persons viewing the landscape. Therefore, the NEPA visual impact assessment for a project may result in impacts and require mitigation while Section 106 for the same project may find no adverse effect on historic properties due to visual impacts if they do not alter the characteristics which qualify the property for inclusion in the NRHP.

Assessment of effects for the project follow in **Section 3.2** for all properties in regard to noise and vibration and **Section 3.3** for each historic property identified in the project APE. In all, the project would result in no adverse effect to historic properties. **Table 3-1** summarizes the effects for each historic property in the project APE.

Table 3-1: Summary of Effects on Historic Properties in the Project APE

3.2 Effects Due to Noise and Vibration

In the NEPA analysis for the project, a general noise and vibration assessment was completed for the Draft EIS and a noise and vibration assessment at sensitive receivers in the vicinity of the relocated 130th Street station is being undertaken with the Final EIS using the updated FTA *Transit Noise and Vibration Impact Assessment Manual* (FTA 2018).

The Draft EIS found the project would result in no noise or vibration impacts due to construction, no permanent vibration impacts, and no permanent noise impacts after mitigation. Mitigation would consist of construction of a noise barrier approximately four feet in height (measured from the top surface of the concrete deck) to reduce noise transmission at and below the height of the tracks. Therefore, historic properties identified within the APE north of the 130th Street station would not be affected by project noise and vibration.

For the relocated 130th Street station, the noise assessment assumed that rail operations along the RLE would consist of electric-powered train types similar to those that currently operate along the Red Line corridor. In the vicinity of the 130th Street station, it was assumed that the trains would operate at-grade on ballast-and-tie track with continuous welded rail. In addition, the noise predictions were based on hourly train volumes and consists (i.e., the number of cars per train) along with train speed profiles (i.e., speeds by location along the corridor) provided by CTA. The predicted noise exposure levels were adjusted for distance to nearby sensitive receivers using FTA methodology and then compared to the existing noise exposure levels at these receivers to assess noise impact based on FTA criteria.

Noise impact from future train operations was assessed at four representative sensitive receiver locations near the relocated 130th Street station. These locations include the TCA Health building, the By the Hand Club, the closest residential buildings to the RLE Project in Altgeld Gardens, and the Carver Military Academy High School.

The noise analysis found there would be no noise impacts and no mitigation measures required due to the 130th Street station location. Similarly, for vibration, there would be no impacts from the 130th Street station relocation. The closest sensitive receivers are well beyond the applicable FTA vibration impact screening distances from the project right-of-way or property line, which are 200 feet for residential receivers and 120 feet for institutional receivers. The historic properties identified within the APE at the 130th Street station would not be affected by project noise and vibration.

Construction activities in the 130th Street station relocation area would include construction of at-grade track as well as park & ride facility and station. As determined in the Draft EIS, these construction activities could result in noise impact at sensitive receivers if they occur within distances of 50 feet during daytime hours and 150 feet during nighttime hours. For vibration, it was determined that most construction equipment can be operated without risk of damage at distances of 15 feet or greater from buildings. Because sensitive receivers are located well beyond these distances, construction noise and vibration levels would not exceed FTA-recommended limits in the vicinity of the 130th Street station relocation. Therefore, there would not be noise or vibration impacts from construction; this has not changed from the Draft EIS.

3.3 Effects on Historic Properties in the Project APE

Effects on historic properties identified in the project APE are discussed individually in the following section. Based on the Preferred Alignment project refinements and the 2019 D.C. district court ruling on “direct” vs “indirect” effects, effect findings for the historic properties presented in the Draft EIS have been reviewed and updated. The project would result in visual changes along the Preferred Alignment and cause temporary changes in vibration, noise, and traffic patterns during construction. Although these changes would have direct and indirect impacts on historic properties in the APE, they would not compromise the integrity of historic properties in the APE, nor would they diminish the characteristics that qualify them for inclusion in the NRHP. Therefore, the identified impacts do not rise to the level of an adverse effect.

3.3.1 #1: Eclectic Neo-Traditional Home, 444 W. 100th Place

The Eclectic Neo-Traditional Home at 444 W. 100th Place, shown in **Figure 3-1**, is NRHP-eligible under Criterion C for architecture. The project’s elevated track would be approximately one block east of the property. It would fall within the viewshed of this historic property but would be partially blocked by surrounding buildings and trees.

Effects on this property were previously assessed in the Draft EIS and resulted in a finding of “no historic properties affected” for UPRR East and West Options. The updated assessment follows.

The property would not be displaced by the project. No vibration or construction effects would affect the characteristics that qualify the property for inclusion in the NRHP. The property would encounter direct visual impacts as a result of the proximity of the project’s elevated track in this location. This would affect its integrity of setting; however, this impact would not compromise the integrity of the building or any of its character defining architectural features which qualify it for listing in the NRHP. Other aspects of integrity would remain intact. Therefore, the project would have no adverse effect on this historic property.

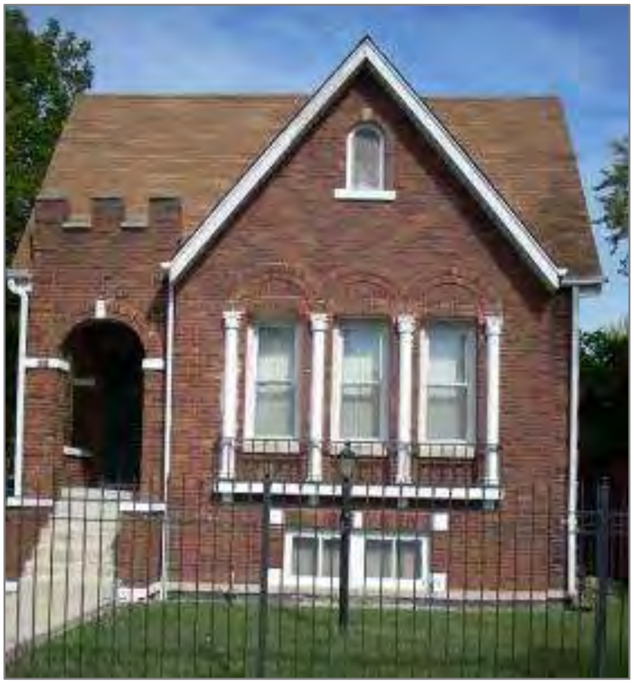

Figure 3-1: Eclectic Neo-Traditional Home, 444 W. 100th Place

3.3.2 #2: Fire Department Engine Company 93, 324 W. 104th Street

The fire station at 324 W. 104th Street, shown in **Figure 3-2**, is NRHP-eligible under Criterion C for architecture. The project's elevated track would be approximately 300 feet west of the property. It would fall within the viewshed of this historic property but would be partially blocked by trees.

Effects on this property were previously assessed in the Draft EIS and resulted in a finding of "no historic properties affected" for UPRR East and West Options. The updated assessment follows.

The property would not be displaced by the project. No noise, vibration, or construction effects would affect the characteristics that qualify the property for inclusion in the NRHP. The property would encounter direct visual impacts as a result of the proximity of the project's elevated track in this location. This would affect its integrity of setting; however, this impact would not compromise the integrity of the building or any of its character defining architectural features which qualify it for listing in the NRHP. Other aspects of integrity would remain intact. Therefore, the project would have no adverse effect on this historic property.

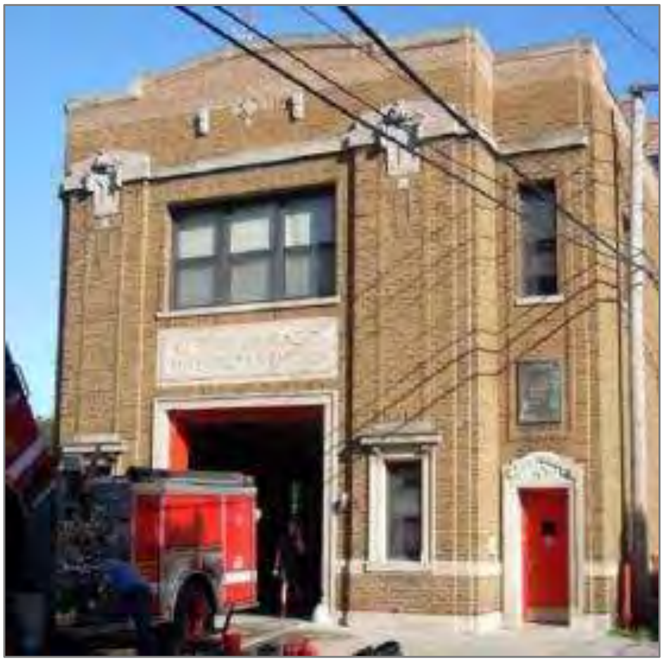

Figure 3-2: Fire Department Engine Company 93

3.3.3 #3: Roseland Pumping Station, 351 W. 104th Street

The Roseland Pumping Station, shown in **Figure 3-3**, is NRHP-eligible under Criterion A for association with broad patterns in history and Criterion C for architecture. The project's elevated track would be approximately 150 feet west of the property. It would fall within the viewshed of this historic property but would be partially blocked by trees.

Effects on this property were previously assessed in the Draft EIS and resulted in a finding of "no adverse effect" for the UPRR East Option and "no historic properties affected" for the UPRR West Option. The updated assessment follows.

The property would not be displaced by the project. No noise, vibration, or construction effects would affect the characteristics that qualify the property for inclusion in the NRHP. The project's elevated track would fall within the viewshed of this historic property. The property would encounter direct visual impacts as a result of the proximity of the project's elevated track in this location. This would affect the property's integrity of setting; however, this impact would not compromise the integrity of the building, its association with broad patterns in history, or any of its architectural character defining features which qualify it for listing in the NRHP. Other aspects of integrity would remain intact. Therefore, the project would have no adverse effect on this historic property.

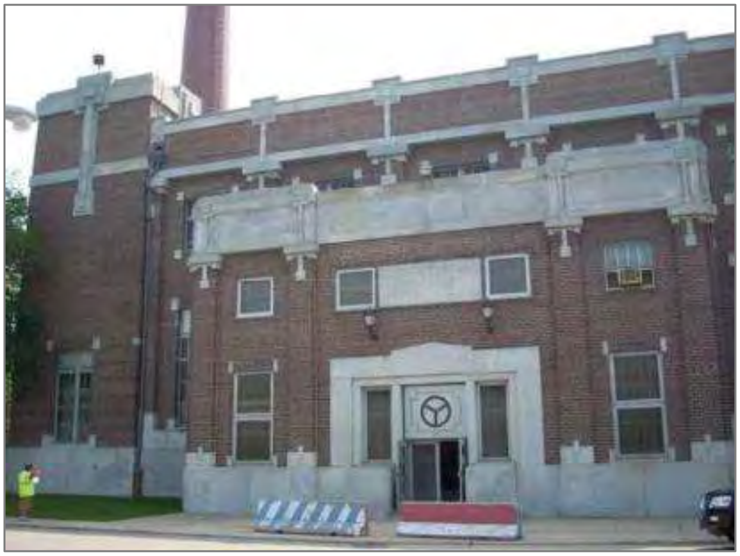

Figure 3-3: Roseland Pumping Station

3.3.4 #4: Romanesque Revival-Style Church, 10920 S. Princeton Avenue

The church at 10920 S. Princeton Avenue, shown in **Figure 3-4**, is NRHP-eligible under Criterion A for association with the community's former Dutch population and under Criterion C for architecture. The project's elevated track would be approximately 350 feet southwest of the property. It would fall within the viewshed of this historic property but would be partially blocked by surrounding smaller buildings and trees.

Effects on this property were previously assessed in the Draft EIS and resulted in a finding of "no historic properties affected" for UPRR East and West Options. The updated assessment follows.

The property would not be displaced by the project. No noise, vibration, or construction effects would affect the characteristics that qualify the property for inclusion in the NRHP. The property would encounter direct visual impacts as a result of the proximity of the project's elevated track in this location. This would affect its integrity of setting; however, this impact would not compromise the integrity of the building, the building's historic association with the community's former Dutch population, or any of its character defining architectural features which qualify it for listing in the NRHP. Other aspects of integrity would remain intact. Therefore, the project would have no adverse effect on this historic property.

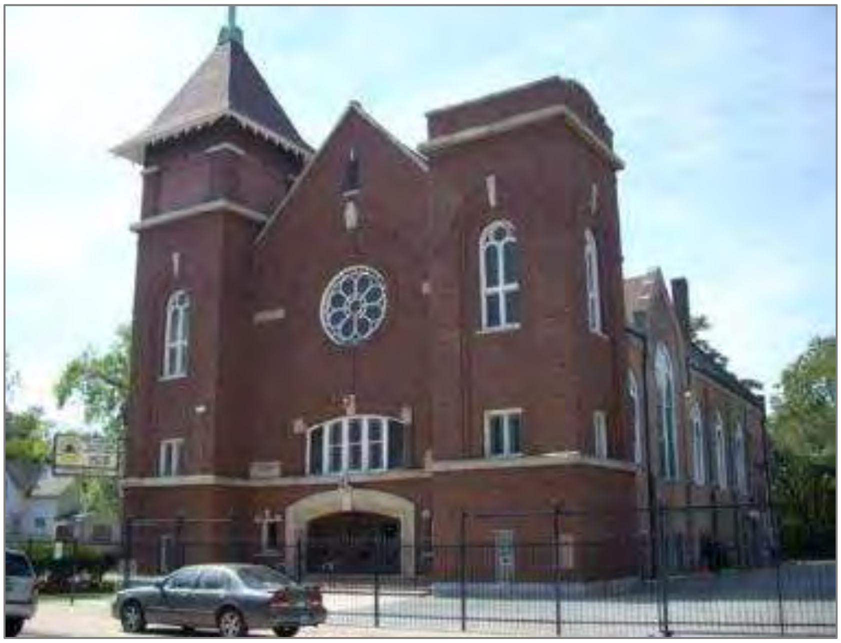

Figure 3-4: Church at 10920 S. Princeton Avenue

3.3.5 #5: Roseland Community Hospital Nurses Home, 11321 S. Wentworth Avenue

Constructed by the Roseland Community Hospital, this property formerly served as an educational facility for nurses. It is shown in **Figure 3-5** and is eligible for listing in the NRHP under Criterion A for association with education. The project's elevated track would be approximately 350 feet southwest of the property. It would fall within the viewshed of this historic property but would be partially blocked by surrounding smaller buildings and trees.

Effects on this property were previously assessed in the Draft EIS and resulted in a finding of "no historic properties affected" for UPRR East and West Options. The updated assessment follows.

The property would not be displaced by the project. No noise, vibration, or construction effects would affect the characteristics that qualify the property for inclusion in the NRHP. The property would encounter direct visual impacts due to its proximity to the elevated tracks. This would affect its integrity of setting; however, this impact would not compromise the integrity of the building, the building's historic association with education, or any of its character defining features which qualify it for listing in the NRHP. Other aspects of integrity would remain intact. Therefore, the project would have no adverse effect on this historic property.

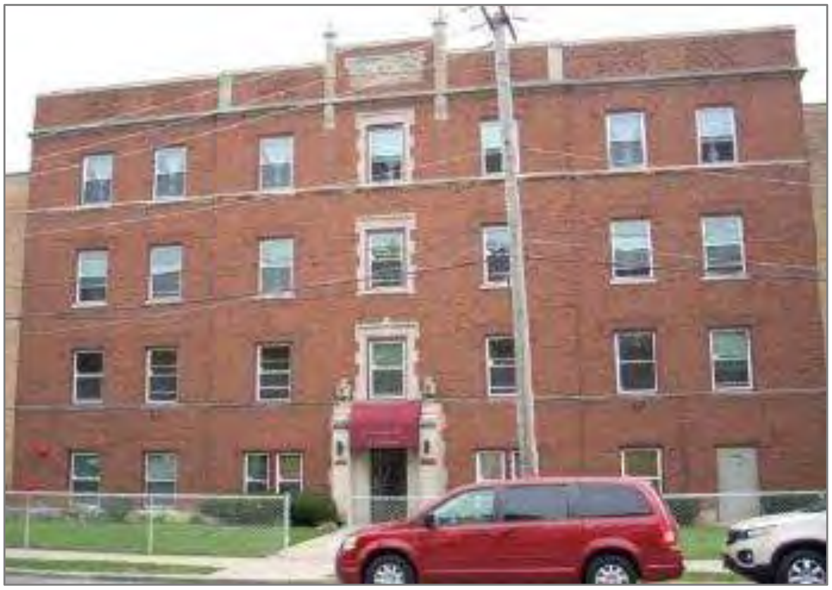

Figure 3-5: Roseland Community Hospital Nurses Home

3.3.6 #6: Former Venetian Hall, 133-139 E. Kensington Avenue

This former social venue and performance hall for Italian Americans, shown in **Figure 3-6**, has been converted into a church. It is eligible for listing in the NRHP under Criterion A for its original use as a social venue for area residents in the early twentieth century. The project's elevated track would be approximately 150 feet southwest of the property. Smaller buildings and a vacant surface lot are situated between the building and the elevated track. For north and south options, the Michigan Avenue station would be along the elevated track, approximately 360 feet to the southwest. For the north option for this station, the parking garage associated with this station would be approximately 400 feet to the west. The parking garage would fall within the viewshed of the historic property. For the south option, the parking garage would be approximately 500 feet southwest of the property and would be partially blocked by the existing elevated UPRR structure. For both options, the kiss & ride would be approximately 150 feet to the west. It would fall within the viewshed of the historic property but be partially blocked by surrounding buildings and trees. See **Figures 3-7** and **3-8** for a conceptual rending of the view of this project from the Former Venetian Hall. Only the north option is depicted for it is expected to have the most visual impacts to this historic property.

Effects on this property were previously assessed in the Draft EIS and resulted in a finding of "no historic properties affected" for UPRR East and West Options. The updated assessment follows.

The property would not be displaced by the project. No noise, vibration, or construction effects would affect the characteristics that qualify the property for inclusion in the NRHP. The property would encounter direct visual impacts due to its proximity to the Michigan Avenue station as described above. This would affect its integrity of setting; however, this impact would not compromise the integrity of the building, the building's historic use as a social venue, or any of its character defining features which qualify it for listing in the NRHP. Other aspects of integrity would remain intact. Therefore, the project would have no adverse effect on this historic property.

North option is shown, as the south option would have lesser visual impact due to the parking garage being located beyond the existing elevated UPRR tracks.

3.3.7 #7: Commercial Building, 11431-11433 S. Michigan Avenue

The commercial building at 11431-11433 S. Michigan Avenue, shown in **Figure 3-9**, is eligible for listing in the NRHP under Criterion A for commerce due to its connection to Roseland's commercial district in the first half of the 20th century. The project's Michigan Avenue station would be approximately 2.5 blocks (925 feet) south of the property. For the north option, the parking garage would be approximately 1.5 blocks (430 feet) south of the property and for the south option, the parking garage would be approximately 2.5 blocks (1130 feet) south of the property. The station, parking garage, and kiss & ride would fall within the viewshed of this historic property, but for the south option, the view of the parking garage would be partially blocked by the project's elevated tracks and the existing UPRR line which is elevated at this location. See **Figures 3-10** and **3-11** for a conceptual rendering of the view of the project from this property.

The property would not be displaced by the project. No noise, vibration, or construction effects would affect the characteristics that qualify the property for inclusion in the NRHP. The property would encounter direct visual impacts due to its proximity to the Michigan Avenue station as described above. This would affect its integrity of setting; however, this impact would not compromise the integrity of the building, the building's historic association with Roseland's commercial district, or any of its character defining features which qualify it for listing in the NRHP. Other aspects of integrity would remain intact. Therefore, the project would have no adverse effect on this historic property.

3.3.8 #8: Commercial Building, 11445-11447 S. Michigan Avenue

The mixed-use commercial/residential building at 11445-11447 S. Michigan Avenue, shown in **Figure 3-12**, is eligible for listing in the NRHP under Criterion A for commerce due to its connection to Roseland's commercial district in the first half of the 20th century and Criterion C for architecture. The project's Michigan Avenue station would be approximately 2 blocks south (900 feet) of the property. For the north option, the parking garage would be approximately 1 block (375 feet) south of the property and for the south option, the parking garage would be approximately 2 blocks (1100 feet) south of the property. The station, kiss & ride, and parking garage would fall within the viewshed of this historic property but for the south option, view of the parking garage would be partially blocked by the existing UPRR line which is elevated at this location.

The property would not be displaced by the project. No noise, vibration, or construction effects would affect the characteristics that qualify the property for inclusion in the NRHP. The property would encounter direct visual impacts due to its proximity to the Michigan Avenue station as described above. This would affect its integrity of setting; however, this impact would not compromise the integrity of the building, the building's historic association with Roseland's commercial district, or any of its character defining architectural features which qualify it for listing in the NRHP. Other aspects of integrity would remain intact. Therefore, the project would have no adverse effect on this historic property.

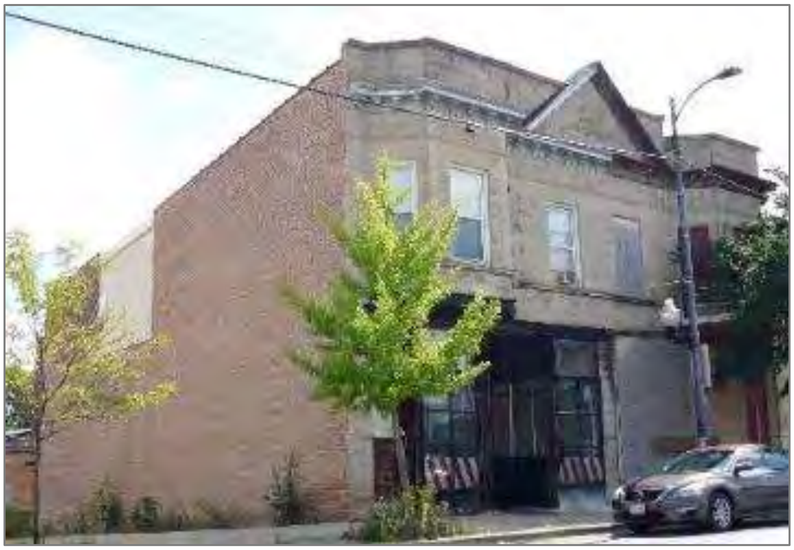

Figure 3-12: North and West Facades, 11445-11447 S. Michigan Avenue

3.3.9 #9: Commercial Building, 11451 S. Michigan Avenue

The commercial building at 11451 S. Michigan Avenue, shown in **Figure 3-13**, is eligible for listing in the NRHP under Criterion A for commerce due to its connection to Roseland's commercial district in the first half of the 20th century and Criterion C for architecture. The project's Michigan Avenue station would be approximately 1 ½ blocks (725 feet) south of the property. For the north option, the parking garage would be approximately ½ block (200 feet) south of the property and for the south option, the parking garage would be approximately 1 ½ blocks (900 feet) south of the property. The station, parking garage, and kiss & ride would fall within the viewshed of this historic property, but for the south option, the view of the parking garage would be partially blocked by the existing UPRR line which is elevated at this location. See **Figures 3-14** and **3-15** for a conceptual rendering of the view of the project from this property.

The property would not be displaced by the project. No noise, vibration, or construction effects would affect the characteristics that qualify the property for inclusion in the NRHP. The property would encounter direct visual impacts due to its proximity to the Michigan Avenue station as described above. This would affect its integrity of setting; however, this impact would not compromise the integrity of the building, the building's historic association with Roseland's commercial district, or any of its character defining architectural features which qualify it for listing in the NRHP. Other aspects of integrity would remain intact. Therefore, the project would have no adverse effect on this historic property.

3.3.10 #10: Single-Family Residence, 11452 S. Indiana Avenue

The residence at 11452 S. Indiana Avenue, shown in **Figure 3-16**, is eligible for listing in the NRHP under Criterion C for architecture. The project's Michigan Avenue station would be approximately ¼ mile (970 feet) southwest of the property. For the north option, the parking garage would be approximately 850 feet southwest of the property and for the south option, the parking garage would be approximately ¼ mile (1140 feet) southwest of the property. The parking garage may fall within the viewshed of this historic property but for both options the view would be partially blocked by surrounding buildings and trees. For the south option, the view would also be blocked by the existing UPRR line which is elevated at this location.

The property would not be displaced by the project. No noise, vibration, or construction effects would affect the characteristics that qualify the property for inclusion in the NRHP. The property would encounter direct visual impacts due to its proximity to the Michigan Avenue station as described above. This would affect its integrity of setting; however, this impact would not compromise the integrity of the building or any of its character defining architectural features which qualify it for listing in the NRHP. Other aspects of integrity would remain intact. Therefore, the project would have no adverse effect on this historic property.

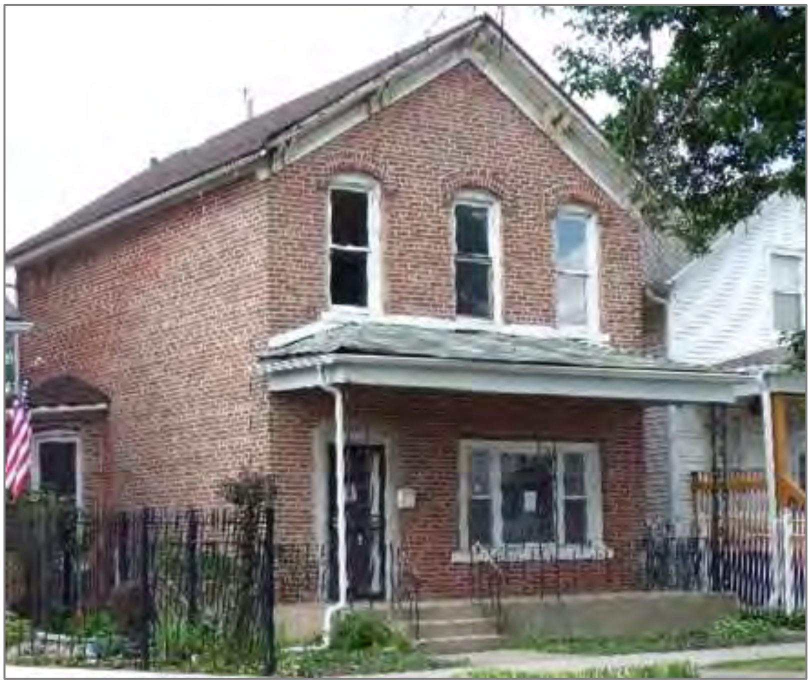

Figure 3-16: South and East Facades, 11452 S. Indiana Avenue

3.3.11 #11: Scanlan Elementary School, 11725 S. Perry Avenue

The Classical Revival style school at 11725 S. Perry Avenue, shown in **Figure 3-17**, is eligible for listing in the NRHP under Criterion A for education and Criterion C for architecture. The project's Michigan Avenue station would be approximately ¼ mile (1360 feet) northeast of the property. The station and parking garage would fall within the viewshed of this historic property. For the south option, the parking garage would be approximately 700 feet northeast of the property and views of the garage would be partially blocked by surrounding smaller buildings and trees. For the north option, the parking garage would be approximately ¼ mile (1425 feet) northeast of the property and views of the parking garage would be partially blocked by the existing UPRR line, which is elevated at this location, and surrounding buildings and trees.

The property would not be displaced by the project. No noise, vibration, or construction effects would affect the characteristics that qualify the property for inclusion in the NRHP. The property would encounter direct visual impacts due to its proximity to the Michigan Avenue station as described above. This would affect its integrity of setting; however, this impact would not compromise the integrity of the building, its association with education, or any of its character defining architectural features which qualify it for listing in the NRHP. Other aspects of integrity would remain intact. Therefore, the project would have no adverse effect on this historic property.

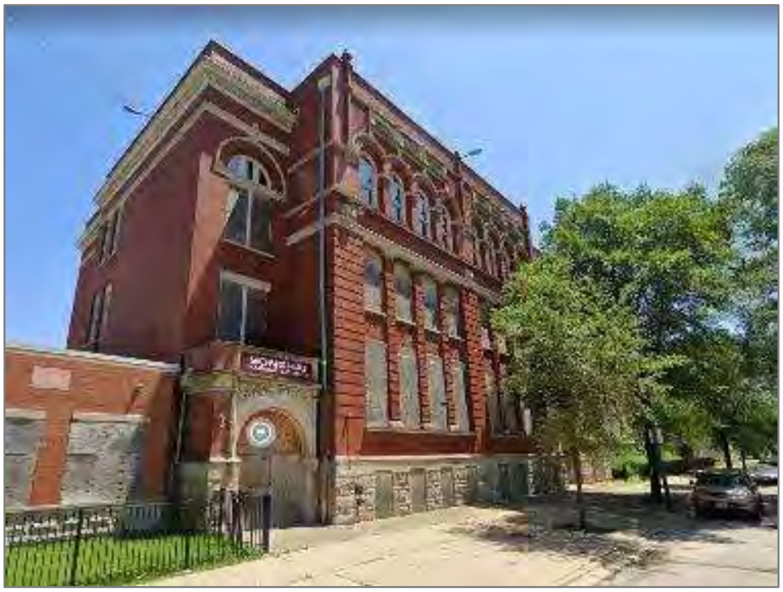

Figure 3-17: West Facade, Scanlan Elementary, 11725 S. Perry Avenue

3.3.12 #12: George William Curtis Public School, 11445 S. State Street

George William Curtis Public School, shown in **Figure 3-18**, is eligible for listing in the NRHP under Criterion A for education and Criterion C for architecture. The project's Michigan Avenue station would be approximately one block southeast of the property. The elevated track structure would be 250 feet from the property at its closest point and views of the tracks from this property would occur to the west along 115th Street and to the south along State Street. For the north option, the parking garage would be approximately 400 feet southeast of the property and fall within the viewshed for this historic property. For the south option, the parking garage would be approximately 700 feet southeast of the property and view of the parking garage would be partially blocked by the existing UPRR line which is elevated in this area.

The property would not be displaced by the project. No noise, vibration, or construction effects would affect the characteristics that qualify the property for inclusion in the NRHP. The property would encounter direct visual impacts due to its proximity to the Michigan Avenue station as described above. This would affect its integrity of setting; however, this impact would not compromise the integrity of the building, its association with education, or any of its character defining architectural features which qualify it for listing in the NRHP. Other aspects of integrity would remain intact. Therefore, the project would have no adverse effect on this historic property.

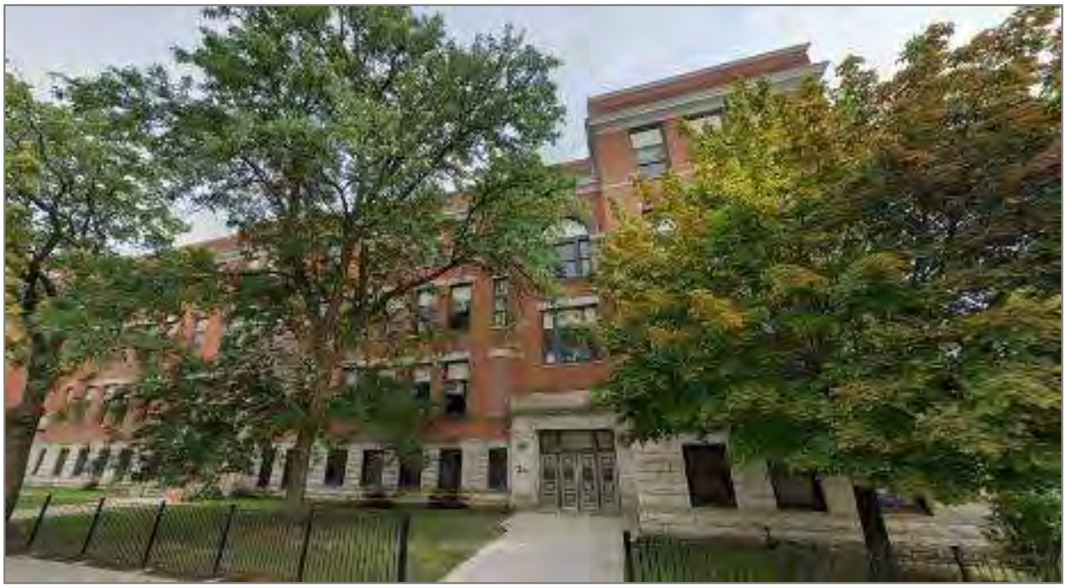

Figure 3-18: West Facade, George William Curtis Public School, 11445 S. State Street

3.3.13 #13: Carver Military Academy High School, 13100 S. Doty Avenue

Carver Military Academy High School at 13100 S. Doty Avenue, shown in **Figure 3-19**, is eligible for listing in the NRHP under Criterion A for education and Criterion C for architecture. The project's 130th Street station would be approximately 750 feet west of the property. The station and parking garage would fall within the viewshed of this historic property but views of the project would be partially blocked by trees. Old 130th Street would be permanently closed across the new project tracks, discontinuing its connection to S. Doty Avenue and Carver Military Academy High School. Vehicles traveling to Carver Military Academy High School would use the primary entrance at Greenwood Avenue to 132nd Street if coming from the north or Doty Avenue to 132nd Street if coming from the south.

The property would not be displaced by the project. No noise, vibration, or construction effects would affect the characteristics that qualify the property for inclusion in the NRHP. The property would encounter direct visual impacts due to its proximity to the 130th Street station as described above. This would affect its integrity of setting and access to the site would be altered; however, this impact would not compromise the integrity of the building, the building's association with education, a notable architect, or any of its character defining architectural features which qualify it for listing in the NRHP. Other aspects of integrity would remain intact. Therefore, the project would have no adverse effect on this historic property.

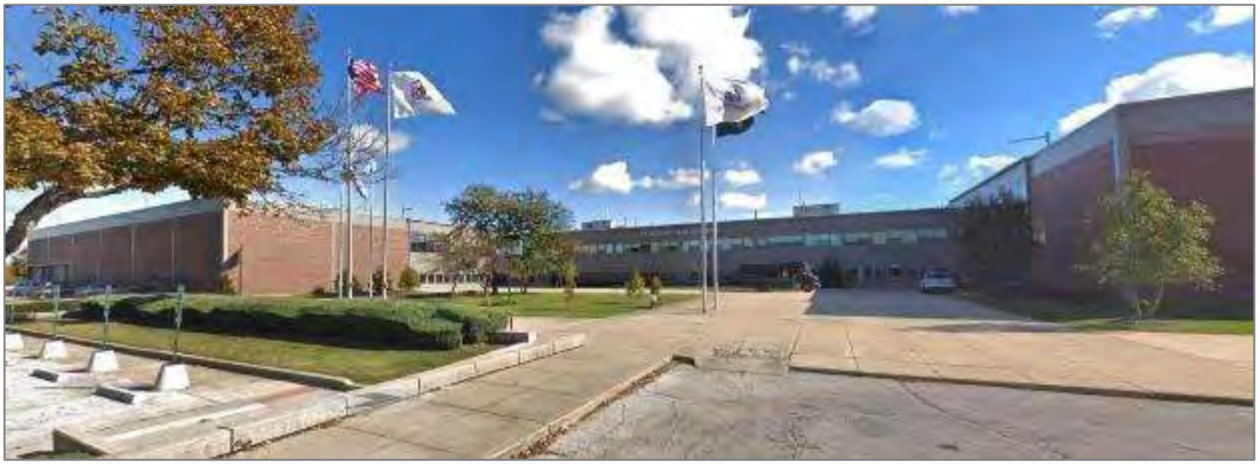

Figure 3-19: West Facade, Carver Military Academy High School, 13100 S. Doty Avenue

3.3.14 #14: Residences Contributing to Altgeld Gardens-Philip Murray Homes Historic District

The Altgeld Gardens-Philip Murray Homes Historic District was constructed in 1945 (Altgeld Gardens) and 1954 (Philip Murray Homes) and is eligible for listing in the NRHP under Criterion A for association with community planning and development, politics/government, and social history, Criterion B for association with resident Hazel Johnson, and Criterion C for architecture including town planning, public housing, and modern architecture. Fifty-three (53) residential buildings within Altgeld Gardens-Philip Murray Homes Historic District are located within the expanded project APE. The residential buildings are uniform in plan and elevation, but are oriented in various directions as shown in **Figure 3-20**. The buildings closest to the project area are along Greenwood Avenue between Ellis Avenue and 132nd Street and those at the northwest corner of 130th Place and Ellis Avenue. The project would fall within the viewshed from these properties and from some of the properties to the west via view corridors between buildings. The parking garage at the 130th Street station would be approximately 220 feet east of the closest residences along Greenwood Avenue. For properties further west of Greenwood Avenue, views of the project would be partially blocked by surrounding buildings and trees. See **Figures 3-21** through **3-24** for representative visual connections of properties closest to the project site. While these figures depict a three-story garage, **Appendix D** includes renderings of a four-story garage.

These historic properties would not be displaced by the project. No noise, vibration, or construction effects would affect the characteristics that qualify them for inclusion in the NRHP. The properties would encounter direct visual impacts due to its proximity to the 130th Street station as described above. This would affect its integrity of setting; however, this impact would not compromise the integrity of these buildings, their association with Community Planning and Development, Politics/Government, Social History, Hazel Johnson, or any of the character defining architectural, town planning, or public housing design features which qualify them for listing in the NRHP. Other aspects of integrity would remain intact. Therefore, the project would have no adverse effect on these properties.

3.3.15 #15: By The Hand Club, 13015 S. Ellis Avenue

The By the Hand Club, shown in **Figure 3-25**, is a contributing property in the Altgeld Gardens-Philip Murray Homes Historic District and is located within the expanded project APE. It was constructed in 1957 and the architect is not known. It is a unique example of Georgian Revival architecture in the community. It is eligible for listing in the NRHP under Criterion A for association with community planning and development, politics/government, and social history, Criterion B for association with resident Hazel Johnson, and Criterion C for architecture including town planning and public housing. It is approximately 220 feet west of the station parking garage. While the parking garage would fall within the viewshed of this historic property, view of the parking garage would be partially blocked by surrounding trees.

The property would not be displaced by the project. No noise, vibration, or construction effects would affect the characteristics that qualify the property for inclusion in the NRHP. The property would encounter direct visual impacts due to its proximity to the 130th Street station as described above. This would affect its integrity of setting; however, this impact would not compromise the integrity of the building, the building's association with Community Planning and Development, Politics/Government, Social History, Hazel Johnson, or any of the character defining architectural, town planning, or public housing design features which qualify it for listing in the NRHP. Other aspects of integrity would remain intact. Therefore, the project would have no adverse effect on this property.

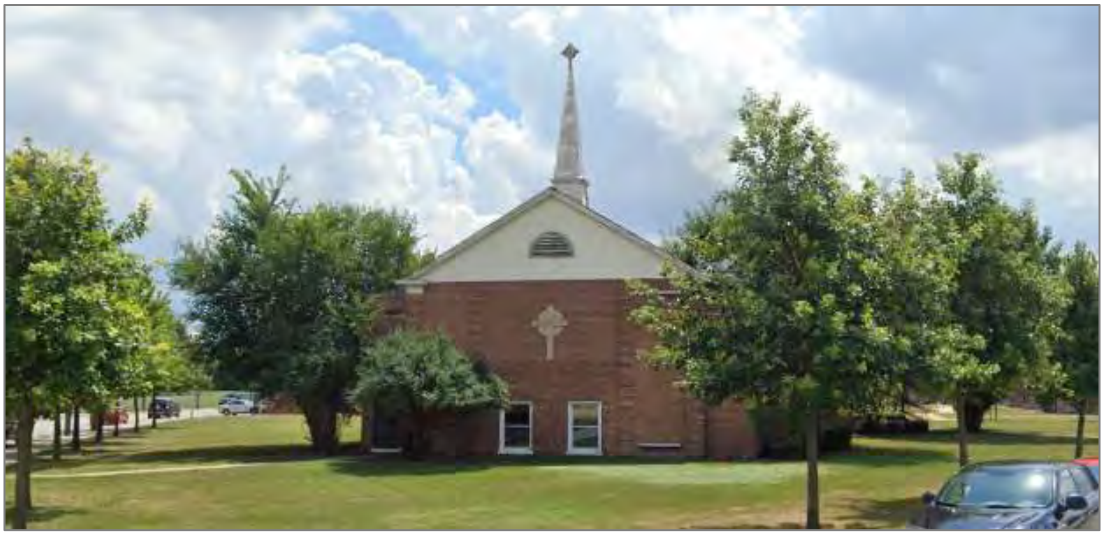

Figure 3-25: Northwest Facade, By the Hand Club, 13015 S. Ellis Avenue

3.3.16 #16: Grocery/Retail Building, 13100 S. Ellis Avenue

The Grocery/Retail Building at 13100 S. Ellis Avenue, shown in **Figure 3-26**, is a contributing property in the Altgeld Gardens-Philip Murray Homes Historic District and is located within the expanded project APE. It was designed by notable architecture firm Keck and Keck and constructed in 1945. It is eligible for listing in the NRHP under Criterion A for association with community planning and development, politics/government, and social history, Criterion B for association with resident Hazel Johnson, and Criterion C for architecture including town planning, public housing, and modern architecture. It is approximately 775 feet west of the station parking garage. The parking garage would fall within the viewshed of this building but would be partially blocked by surrounding buildings and trees.

The property would not be displaced by the project. No noise, vibration, or construction effects would affect the characteristics that qualify the property for inclusion in the NRHP. The property would encounter direct visual impacts due to its proximity to the 130th Street station as described above. This would affect its integrity of setting; however, this impact would not compromise the integrity of the building, the building's association with Community Planning and Development, Politics/Government, Social History, and Hazel Johnson or any of the character defining architectural, town, or public housing design features which qualify it for listing in the NRHP. Other aspects of integrity would remain intact. Therefore, the project would have no adverse effect on this property.

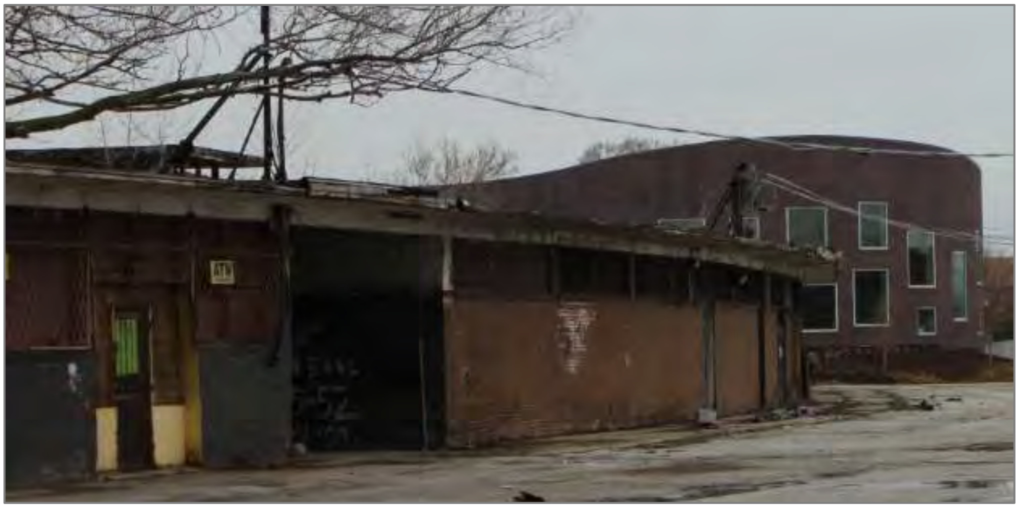

Figure 3-26: Northeast Facade, Grocery/Retail Building, 13100 S. Ellis Avenue

3.3.17 #17: Administration/Maintenance Building, 940 E. 132nd Street

The Administration/Maintenance Building at 940 E. 132nd Street, shown in **Figure 3-27**, is a contributing property in the Altgeld Gardens-Philip Murray Homes Historic District and is located within the expanded project APE. It was designed by the architectural firm Shaw, Naess & Murphy and constructed in 1944. It is eligible for listing in the NRHP under Criterion A for association with community planning and development, politics/government, and social history, Criterion B for association with resident Hazel Johnson, and Criterion C for architecture including town planning, public housing, and modern architecture. It is over 960 feet west of the station parking garage. The parking garage would fall within the viewshed of this property, but views of the parking garage would be partially blocked by surrounding buildings and trees.

The property would not be displaced by the project. No noise, vibration, or construction effects would affect the characteristics that qualify the property for inclusion in the NRHP. The property would encounter direct visual impacts due to its proximity to the 130th Street station as described above. This would affect its integrity of setting; however, this impact would not compromise the integrity of the building, the building's association with Community Planning and Development, Politics/Government, Social History, Hazel Johnson, or any of the character defining architectural, town, or public housing design features which qualify it for listing in the NRHP. Other aspects of integrity would remain intact. Therefore, the project would have no adverse effect on this property.

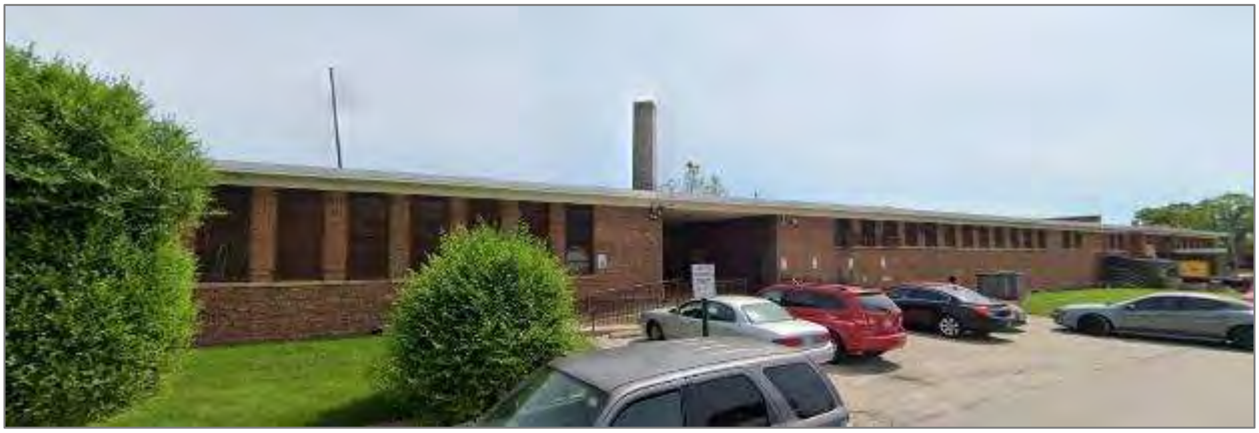

Figure 3-27: Southwest Facade, Administration/Maintenance Building, 940 E. 132nd Street

3.3.18 #18: CYC - Dorothy Gautreaux Child Development Center, 975 E. 132nd Street

The CYC-Dorothy Gautreaux Child Development Center at 975 E. 132nd Street, shown in **Figure 3-28**, is a contributing property in the Altgeld Gardens-Philip Murray Homes Historic District and is located within the expanded project APE. It was constructed in 1979 and the architect is not known. It is eligible for listing in the NRHP under Criterion A for association with community planning and development, politics/government, and social history, Criterion B for association with resident Hazel Johnson, and Criterion C for architecture including town planning, public housing, and modern architecture. It is approximately 850 feet west of the station parking garage. The parking garage would fall within the viewshed of this historic property but views of the parking garage would be partially blocked by surrounding buildings and trees.

The property would not be displaced by the project. No noise, vibration, or construction effects would affect the characteristics that qualify the property for inclusion in the NRHP. The property would encounter direct visual impacts due to its proximity to the 130th Street station as described above. This would affect its integrity of setting; however, this impact would not compromise the integrity of the building, the building's association with Community Planning and Development, Politics/Government, Social History, Hazel Johnson, or any of the character defining architectural, town, or public housing design features which qualify it for listing in the NRHP. Other aspects of integrity would remain intact. Therefore, the project would have no adverse effect on this property.

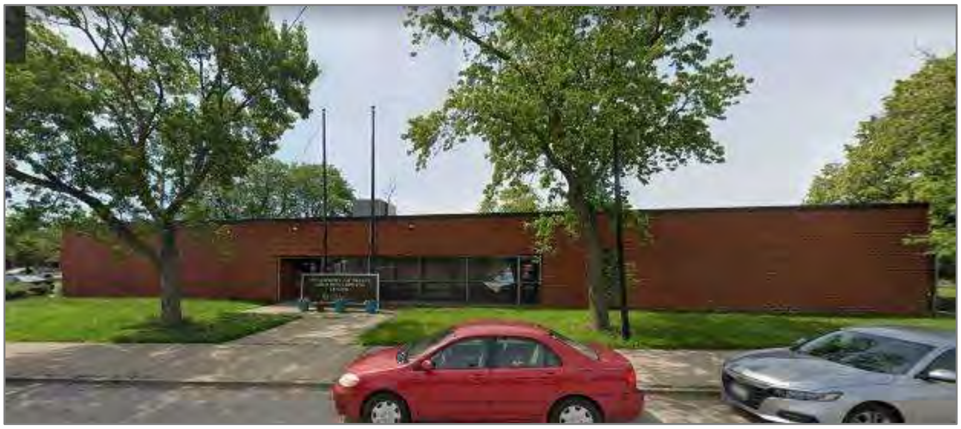

Figure 3-28: North Facade, CYC – Dorothy Gautreaux Child Development Center, 975 E. 132nd Street

3.3.19 #19: Children's Building, 941 E. 132nd Street

The Children's Building at 941 E. 132nd Street, shown in **Figure 3-29**, is a contributing property in the Altgeld Gardens-Philip Murray Homes Historic District and is located within the expanded project APE. It was constructed in 1944 for community and child care purposes and was designed by architectural firm Shaw Naess & Murphey. It is eligible for listing in the NRHP under Criterion A for association with community planning and development, politics/government, and social history, Criterion B for association with resident Hazel Johnson, and Criterion C for architecture including town planning, public housing, and modern architecture. It is approximately 1150 feet west of the station parking garage. The parking garage would fall within the viewshed of this historic property but views of the parking garage would be partially blocked by surrounding buildings and trees.

The property would not be displaced by the project. No noise, vibration, or construction effects would affect the characteristics that qualify the property for inclusion in the NRHP. The property would encounter direct visual impacts due to its proximity to the 130th Street station as described above. This would affect its integrity of setting; however, this impact would not compromise the integrity of the building, the building's association with Community Planning and Development, Politics/Government, Social History, Hazel Johnson, or any of the character defining architectural, town, or public housing design features which qualify it for listing in the NRHP. Other aspects of integrity would remain intact. Therefore, the project would have no adverse effect on this property.

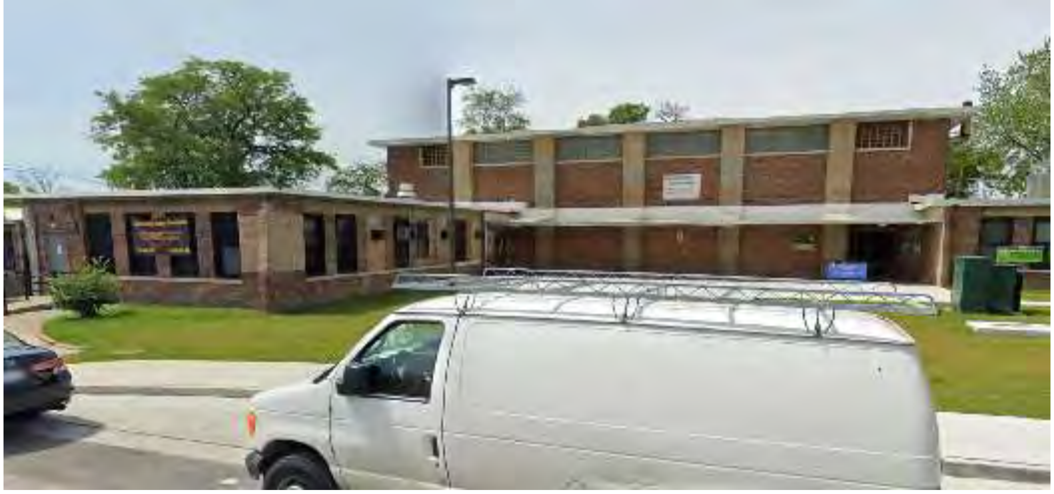

Figure 3-29: North Facade, Children's Building, 941 E. 132nd Street

3.3.20 #20: Altgeld Gardens Community Building No. 2, 951 E. 132nd Place

The Altgeld Gardens Community Building No. 2 at 951 E. 132nd Place, shown in **Figure 3-30**, is a contributing property in the Altgeld Gardens-Philip Murray Homes Historic District and is located within the expanded project APE. It was constructed in 1972 and designed by architectural firm Pereira, Bernheim & Kahn. It is eligible for listing in the NRHP under Criterion A for association with community planning and development, politics/government, and social history, Criterion B for association with resident Hazel Johnson, and Criterion C for architecture including town planning, public housing, and modern architecture. It is approximately 1250 feet west of the station parking garage. The parking garage would fall within the viewshed of this historic property but views of the parking garage would be partially blocked by surrounding buildings and trees.

The property would not be displaced by the project. No noise, vibration, or construction effects would affect the characteristics that qualify the property for inclusion in the NRHP. The property would encounter direct visual impacts due to its proximity to the 130th Street station as described above. This would affect its integrity of setting; however, this impact would not compromise the integrity of the building, the building's association with Community Planning and Development, Politics/Government, Social History, Hazel Johnson, or any of the character defining architectural, town, or public housing design features which qualify it for listing in the NRHP. Other aspects of integrity would remain intact. Therefore, the project would have no adverse effect on this property.

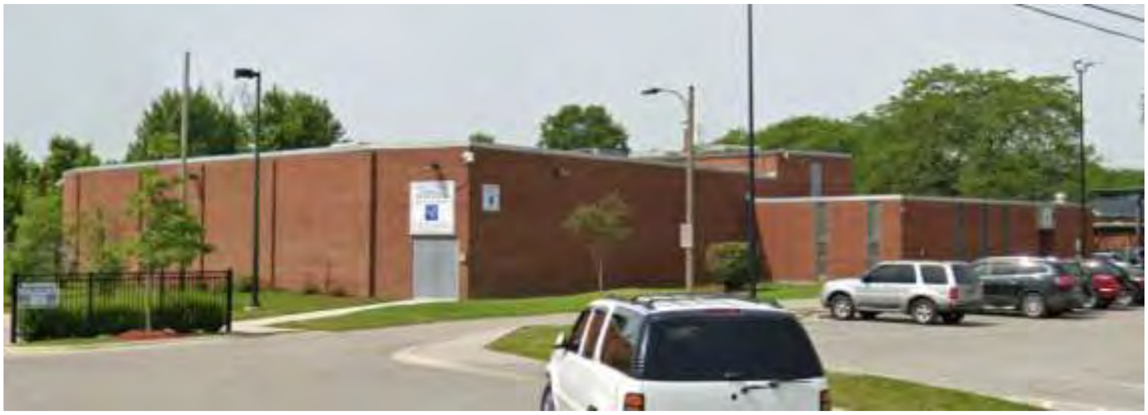

Figure 3-30: North and East Facades, Altgeld Gardens Community Building No. 2, 951 E. 132nd Place

3.3.21 #21: Altgeld Gardens-Philip Murray Homes Historic District

This historic district, shown in **Figure 3-31**, was constructed in 1945 (Altgeld Gardens) and 1954 (Philip Murray Homes) and is eligible for listing in the NRHP under Criterion A for association with community planning and development, politics/government, and social history, Criterion B for association with resident Hazel Johnson, and Criterion C for architecture including town planning, public housing, and modern architecture. The boundary for the historic district, shown in **Figure 2-3**, is roughly 130th Place to the north, Greenwood Avenue to the east, 133rd Place to the south, and South Lawrence Avenue to the west. It includes the east curb of Greenwood Avenue and the entrance to Altgeld Gardens at Ellis Avenue.

Effects on this historic district were previously assessed in the Draft EIS and resulted in a finding of "no historic properties affected" for UPRR East and West Options. In response to their review of the 2021 Eligibility Report, the Illinois SHPO provided a letter dated March 18, 2021 stating: "Because the Red Line will now extend south of 130th Street, Altgeld Gardens will now be effected by this Undertaking. Therefore, our 2017 concurrence that Altgeld Gardens will not be adversely effected by this Undertaking is rescinded. We will continue to review the undertaking for its effects on Altgeld Gardens." The updated assessment for the historic district follows.

The RLE Project would construct an at-grade station and parking garage to the east of the historic district. The project footprint would be located in an area that once contained Altgeld Gardens residential buildings but is not included in the historic district boundary. All of the residences on these blocks were demolished in 2017 by the Chicago Housing Authority. In addition to closure of Old 130th Street across the project tracks, changes to traffic patterns along Ellis Avenue, Greenwood Avenue, and Old 130th Street would also occur as part of the project. All traffic to the station would use Ellis Avenue to Greenwood Avenue and turn left onto 130th Place. Traffic exiting the station would be directed back onto 130th Place north to Old 130th Street and back to Ellis Avenue, minimizing traffic changes in the Altgeld Gardens-Philip Murray Homes Historic District.

There are fifty-nine contributing properties to the Altgeld Gardens-Philip Murray Homes Historic District within the project APE. Assessment of effects for these properties are detailed above in **Sections 3.3.14** through **3.3.20.**

These historic properties would not be displaced by the project. No noise, vibration, or construction effects would affect the characteristics that qualify the property for inclusion in the NRHP. The property would encounter direct visual impacts due to its proximity to the 130th Street station as described above. This would affect its integrity of setting; however, this impact would not compromise the integrity of the building or any of its character defining features. Other aspects of integrity would remain intact.

In order to accommodate design flexibility for the 130th Street station, the SHPO has defined parameters for a finding of no adverse effect. As stated in a letter provided by the SHPO on August 10, 2021, these parameters include:

- A parking garage of 4-stories or less.
- Option to use existing 130th Place as the station entrance. The SHPO accepts this option would eliminate on-street parking on Greenwood Avenue for one block between Ellis Avenue and 130th Place.
- Option to place the entrance to the station at the historic curb cut into the original parking lot in Block 11 and creates 132nd Place. Doing so would result in the elimination of two blocks of historically appropriate on-street parking along the east side of Greenwood Avenue and bring traffic deeper (further south) into Altgeld Gardens-Phillip Murray Homes (AGPMH). The SHPO would accept this option as meeting the Secretary of the Interior's Standards and not adversely affecting AGPMH if residents of AGPMH are also in favor.

These design parameters were the result of a meeting between FTA, CTA, and SHPO on July 26, 2021. The meeting presentation, additional renderings, meeting minutes, and SHPO review letter are included in this document as **Appendix D**.

Following these parameters, the project would have no adverse effect on the historic district or any of its contributing properties.

OUTBUILDINGS (# AND DESCRIPTION) None

PROPERTY DESCRIPTION

This building is four story building that is a part of the George William Curtis Public school (Chicago Public Schools). It has a red brick façade with rusticated stone base and limestone lintels and cornice. Windows are double hung replacements. Entrances are set of 4 double doors (replacements) surrounded by limestone columns and entablature. The building appears to be in good condition. Modern brick additions exist to the east and have little architectural character.

The building was mentioned as a comparable school in the West Pullman Elementary School National Register Report. While the building originally was designed in a Romanesque and Classical Revival style, the building received additions in 1906 and 1974, and in 2009 the 1893 and 1906 portions of the building were renovated.

HISTORY/DEVELOPMENT

The original building at 11445 S. State Street was designed by W. August Fiedler. Fiedler immigrated from Germany to the US in 1871. After working as an architect in New York City, he moved to Chicago in 1874 due to its rapid growth at that time. In the 1880s, Fiedler formed an architectural practice with John Addison. In 1893, Fiedler was appointed Chicago Board of Education Architect. During this three-year appointment, Fiedler designed 58 new school buildings throughout the city.

The building opened in 1893, with Thomas Hill as principal. Mr. Hill remained principal until 1925. The building operated as a combination elementary school and high school. The high school, known as Fenger High School, occupied the lower floors of the building, and the elementary school, known as Curtis school, occupied the upper floors. In 1910, the high school had 310 students and the elementary school had 1120 students. In 1926 Fenger High School was built at 112th St and Wallace, and high school classes were transferred to the new school. A junior high school was maintained at Curtis School until 1933. Not long after, the school became an all-elementary school.

On September 1, 1892, the *Inter Ocean* reported that Miss Burt, a member of the School Board, presented a resolution naming a new school building in honor of George William Curtis, best known as editor of *Harper's Weekly*, who had died in August of that year. The nomination was adopted. The school building would be located at Michigan and Stanwood Avenues in the Kensington neighborhood. The building was constructed in 1893, designed by Chicago Board of Education architect W. August Fiedler in the Romanesque and Classical Revival styles.

In 1903, the Iroquois Theater burned in Chicago and 41 teachers from 32 Chicago Public Schools who were in attendance lost their lives, including Amy Owens, a teacher from Curtis School, and her mother Frances E. Owens, died in the Iroquois Theater Fire. Chicago Public Schools were closed in memoriam until Tuesday, January 5, 1904.

In 1906, the Chicago Board of Education architect Dwight H. Perkins announced that the Curtis School would receive an addition of 12 rooms and a hall, the cost of which would be $200,000.

In December of 1931, a fire occurred in the northwest wing of the school. The damaged wing wasn't re-built, and the space was converted into a playground.

SHPO Presentation
130th Street Station
Layout and Access Concepts

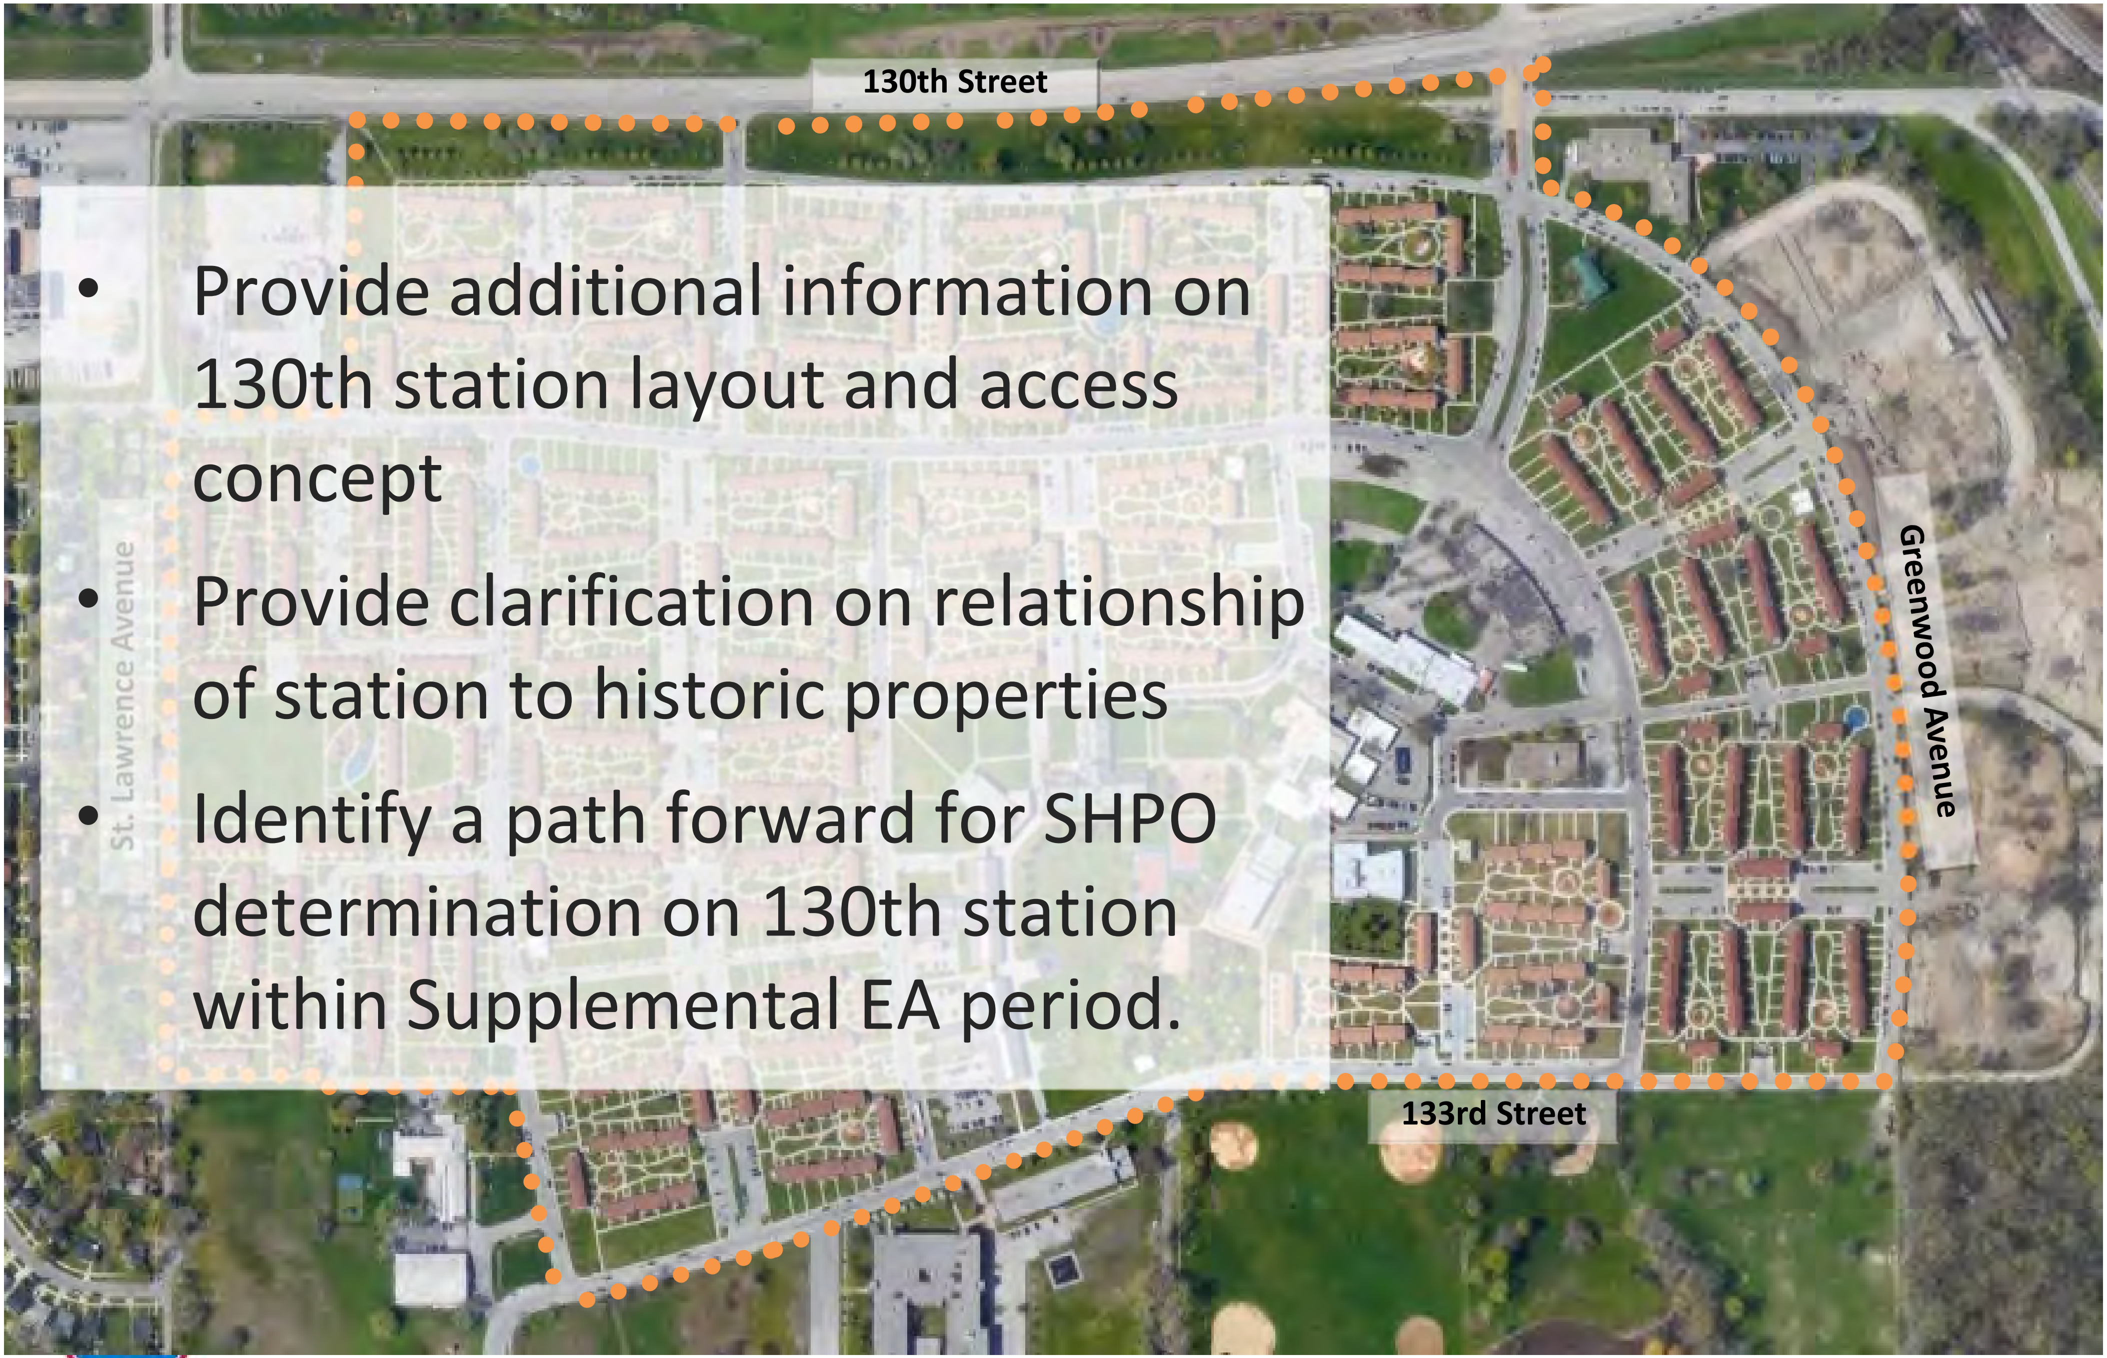
July 26, 2021

cta

Welcome and Introductions

Meeting Purpose

- Provide additional information on 130th station layout and access concept
- Provide clarification on relationship of station to historic properties
- Identify a path forward for SHPO determination on 130th station within Supplemental EA period.



130th Street
St. Lawrence Avenue
Greenwood Avenue
133rd Street

Agenda

- Review of Current Proposed Station Layout and Access Concept
- Additional Station Access Concepts
- Open Discussion

Traffic Studies

- Historic Peak Volume Analysis for Blocks 11, 12, & 13

ITE Description	ITE Code	Unit	No. of Units	AM Peak Hour Trips 7:30 AM to 8:30 AM			PM Peak Hour Trips 4:00 PM to 5:00 PM		
				Total	Enter	Exit	Total	Enter	Exit
Multifamily Housing (Low-Rise)	220	Dwelling Units	500	258	72	186	331	196	136

Traffic Studies

- 2050 Peak Hourly Volumes Analysis
- Ellis Avenue Traffic Immediately South of 130th Street

	AM Peak Hour Trips 7:30 AM to 8:30 AM			PM Peak Hour Trips 4:00 PM to 5:00 PM		
	Total	**Enter (SB)**	**Exit (NB)**	**Total**	**Enter (SB)**	**Exit (NB)**
2050 Background Traffic (No Build)	481	296	185	299	128	171
2050 Station Generated Traffic	500	421	79	441	47	394
2050 Total Traffic (Build)	981	717	264	740	175	565

Rule of thumb for 2-Lane Street:

- 1600 vehicles per hour – typical max lane capacity before needing more lanes.

Traffic Studies

- Analysis of Internal Intersections

ID	Intersection	Control Type	No Build		Build	
			AM Peak Hour LOS[1]	PM Peak Hour LOS[1]	AM Peak Hour LOS[1]	PM Peak Hour LOS[1]
1	130th St and Ellis Ave	Signalized	B	B	B	C
2	Old 130th St and Ellis Ave	Unsignalized	A	A	A	A
3	Greenwood Ave and Ellis Ave	Unsignalized	A	A	A	A
4	130th Pl and Greenwood Ave	Unsignalized	A	A	A	A
5	131st St and Greenwood Ave	Unsignalized	A	A	A	A
6	132nd St and Greenwood Ave	Unsignalized	A	A	A	A
7	132nd St and Beaubien Woods driveway	Unsignalized	A	A	A	A
8	132nd St and Doty Ave	Unsignalized	A	A	A	A

Notes:

1. Signalized intersection Level of Service (LOS) is reported as the average delay for all movements. Unsignalized intersection LOS reported is the average delay for the minor street movements and major street left turns.
2. LOS deterioration between No Build and Build is shown in red.

Roadway Improvements

- 130th Street and Ellis Avenue Intersection
  - Not within the AGPMH Historic District
  - Adjust amount of time allotted to each phase of the signal for the PM peak.
  - Extend the eastbound right turn and westbound left turn storage lanes on 130th Street.
- Only roadway improvements proposed

Roadway Improvements

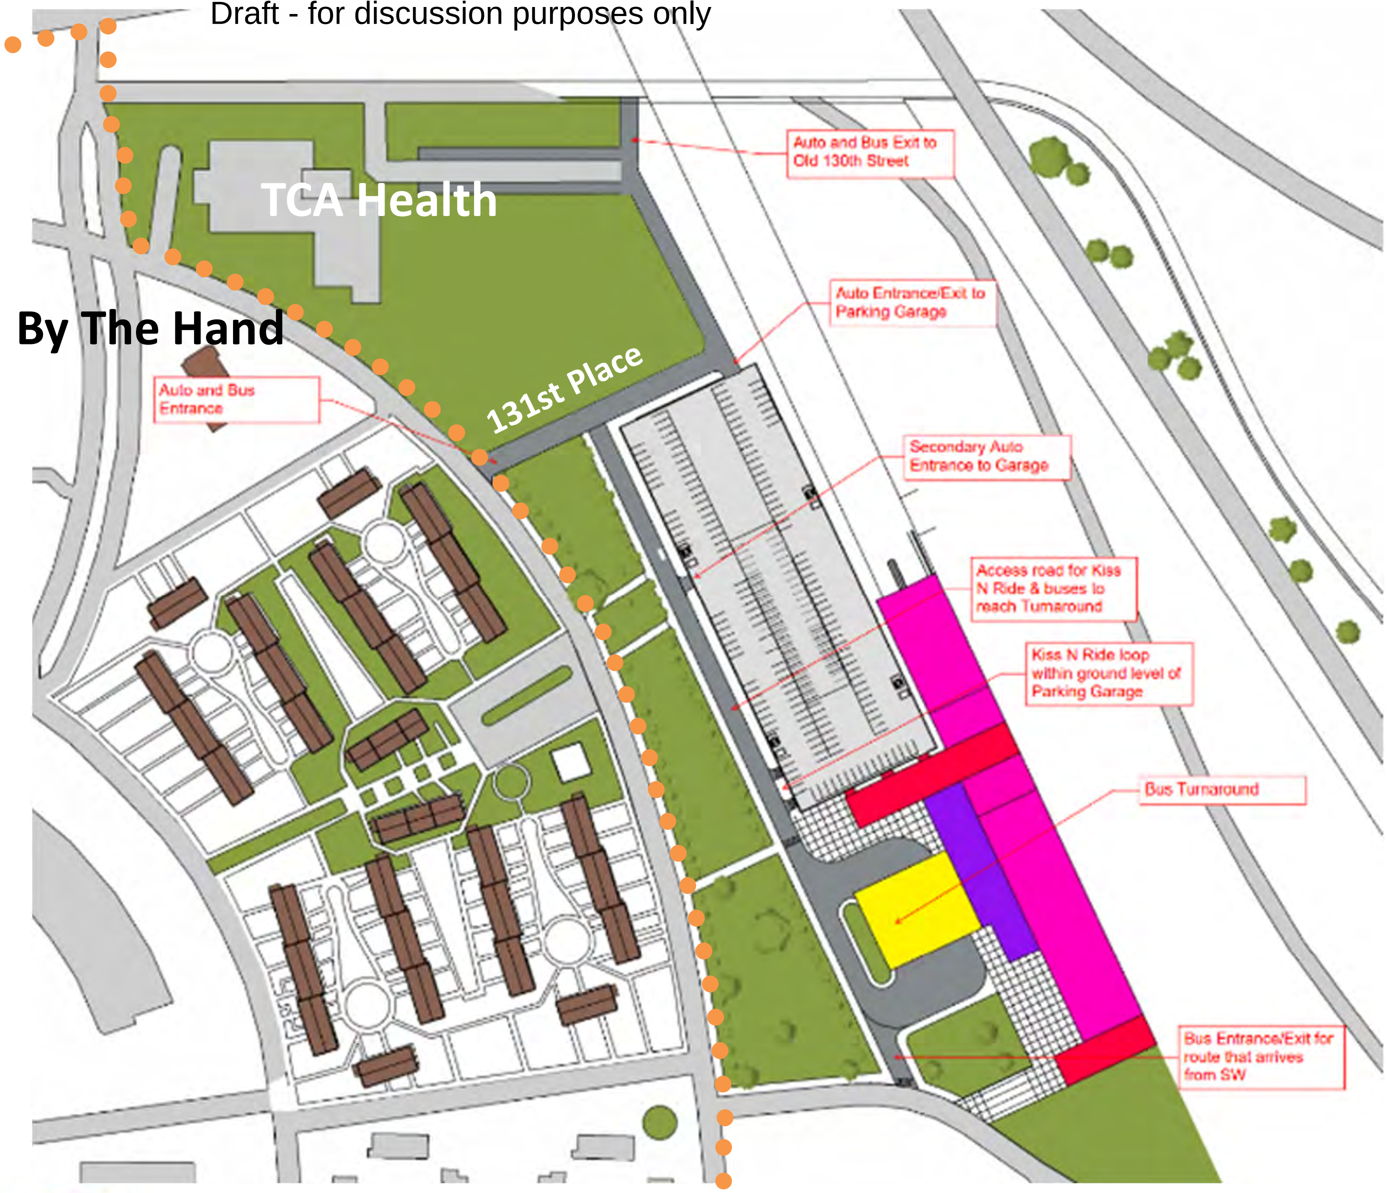
Vehicle Access Option 1

Draft - for discussion purposes only



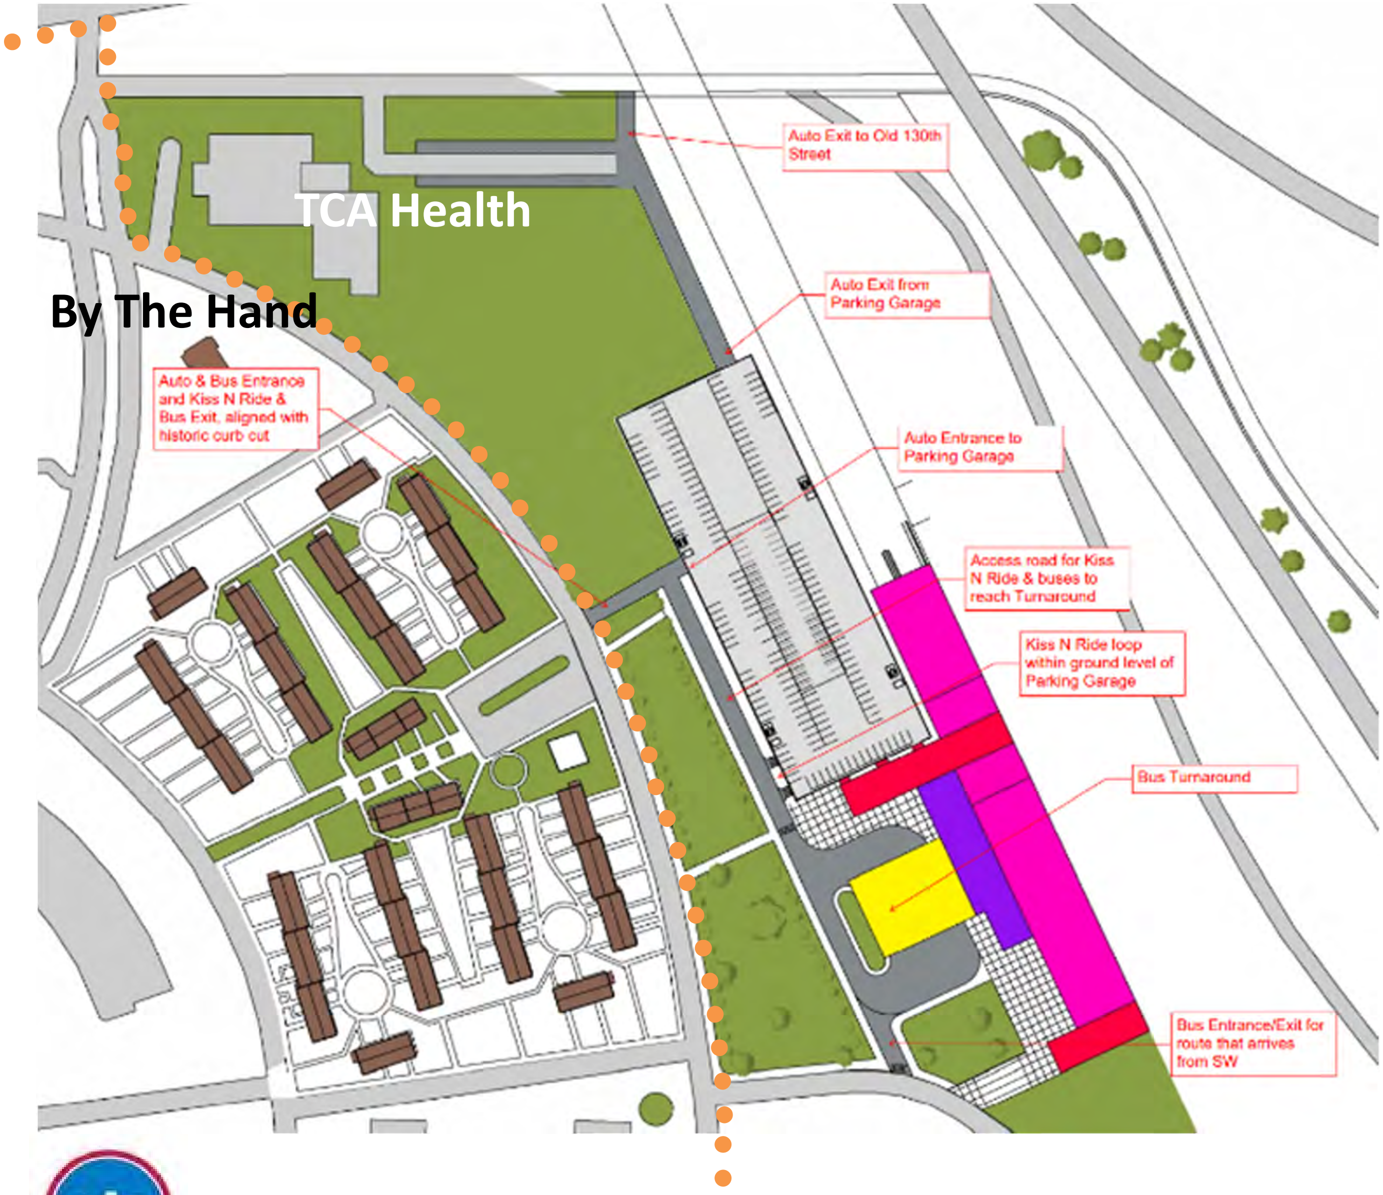
TCA Health
By The Hand
131st Place
Auto and Bus Exit to Old 130th Street
Auto Entrance/Exit to Parking Garage
Auto and Bus Entrance
Secondary Auto Entrance to Garage
Access road for Kiss N Ride & buses to reach Turnaround
Kiss N Ride loop within ground level of Parking Garage
Bus Turnaround
Bus Entrance/Exit for route that arrives from SW

- Garage increases in height by one story, reduces footprint at the north end of the parcel
- Close 130th Pl, open new street further south (131st Pl) to access north end of southward shifted garage footprint
- Garage entrance / exit shifted eastward to be directly adjacent to RLE Tracks
- Maintains current bus entrance from Greenwood and bus exit to Old 130th St, with entrance / exit at 132nd St for single bus route arriving from southwest of the station

Additional Concepts

Vehicle Access Option 2

Draft - for discussion purposes only



TCA Health
By The Hand
Auto Exit to Old 130th Street
Auto Exit from Parking Garage
Auto & Bus Entrance and Kiss N Ride & Bus Exit, aligned with historic curb cut
Auto Entrance to Parking Garage
Access road for Kiss N Ride & buses to reach Turnaround
Kiss N Ride loop within ground level of Parking Garage
Bus Turnaround
Bus Entrance/Exit for route that arrives from SW

- Garage entrance from west side of garage / garage exit remains from north side of garage to Old 130th St and shifted eastward to be directly adjacent to RLE Tracks
- Close 130th Pl, open new street further south than Option 1 (132nd Pl) to access mid-point of west side of garage utilizing historic curb cut on east side of Greenwood
- Garage entrance from west side of garage / garage exit remains from north side of garage, but shifted eastward to be directly adjacent to RLE tracks
- Maintains current bus entrance from Greenwood, however bus exit now returns to Greenwood the way they entered. Kiss n Ride-only exit traffic will also return to Greenwood (will not pass through garage to exit north to Old 130th St)

Meeting Minutes

Project: **Red Line Extension**
Meeting Purpose: **SHPO Coordination**
Date: **Monday, July 26, 2021**
Location: **Remote Meeting**
Time: **2:00 PM**

Chairperson: **Marlise Fratinardo**

Attendees: (See Attached copy of Sign-in-Sheet)

Item No.	*Date*	*Item Description*	*Responsibility/ Status*	*Due/Closed Date*
1.00	**Introductions**			
1.01	7/26/21	Introductions were made.		
2.00	**Purpose of Meeting**			
2.01	7/26/21	The purpose of this meeting was to discuss the SHPO comments on the draft Effects Report. In the comments, SHPO indicated that there was not enough information available to definitively determine that there would be no adverse effect on the Altgeld Gardens historic district. Additional design information will be presented regarding the vehicle access to 130th Street station and the completed traffic study in this area.		
2.02	7/26/21	SHPO was given an opportunity to provide additional clarification on the comments but did not have any clarifications to add.		
2.03	7/26/21	A path forward for the SHPO determination for the Supplemental EA will also be discussed.		
3.00	**Review of Current Proposed 130th Street Station Layout and Access Concept**			
3.01	7/26/21	A more detailed review of the materials presented at the 6/30/21 consulting party (CP) meeting was discussed.		
3.02	7/26/21	The nomination of the Altgeld Gardens-Phillip Murray Homes (AGPMH) historic district is being prepared by the Chicago Housing Authority (CHA).		
3.03	7/26/21	As part of the National Register of Historic Places (NRHP) nomination, a historic district boundary has been determined and preliminarily approved by SHPO.		
3.04	7/26/21	According to the NRHP nomination, the AGPMH historic district is eligible under Criteria A, B and C.		
3.05	7/26/21	The AGPMH historic district nomination has been used for the evaluation of the RLE project's effects on the historic district.		
3.06	7/26/21	The AGPMH neighborhood was planned on a curvilinear street system. A core of community and public buildings was surrounded by 2-story brick row houses. The neighborhood was intended to be a city within a city and provided public and private transportation throughout the neighborhood.		
3.07	7/26/21	Much of the original AGPMH area is encompassed by the historic district boundary. Because of the demolition of the buildings east of Greenwood Avenue (CHA blocks 11, 12 and 13) and the resulting loss of historic integrity, this area was excluded from the historic district.		
3.08	7/26/21	The proposed 130th Street station will be located on CHA blocks 11 and 13, and a connection from the station to Old 130th Street would pass through the east side of the TCA Health parcel.		

Item No.	*Date*	*Item Description*	*Responsibility/ Status*	*Due/Closed Date*
3.09	7/26/21	In the current concept, there will be a 3-story parking garage containing a Kiss n Ride loop, a bus turnaround, CTA offices, station platforms, and track alignment leading into the station.		
3.10	7/26/21	Primary access to the station would be from 130th Street, south to Ellis Avenue, southeast to Greenwood Avenue, and East to 130th Place. Vehicles would primarily exit the site north to Old 130th Street, north to Ellis, and out to 130th Street.		
3.11	7/26/21	No new curb cuts are being proposed in this concept, as access to the station via 130th Place is part of the historical ring road.		
3.12	7/26/21	Green space would be provided west of the station to provide a buffer between the station and the neighborhood.		
3.13	7/26/21	Altgeld Gardens was originally designed for vehicle and bus traffic. The #34 bus is currently routed through the Altgeld Gardens historic district and runs every 10 minutes during peak hours.		
3.14	7/26/21	The RLE project provides a critical connection and much needed access to transit for Altgeld Gardens residents.		
3.15	7/26/21	No changes are proposed to the geometry or location of streets within the historic district, and the station conceptual layout has been developed to minimize increases in traffic on the historic district streets.		
3.16	7/26/21	The only overlap between the station traffic and the historic district is one block of Ellis Avenue and one block of Greenwood Avenue, which only fronts commercial properties.		
3.17	7/26/21	Renderings of the station from Greenwood looking east that were presented at the CP meeting were reviewed. The renderings were intended to show the scale of the station elements, but the construction appearance may differ based on future design decisions.		
3.18	7/26/21	A traffic study has been completed, including vehicular traffic counts within Altgeld Gardens and at the 130th Street interchange with I-94. The analysis included the Build and No Build conditions, traffic distribution and local circulation patterns, road capacities, peak hour traffic volumes, and planned roadway improvements. Five of the eight intersections analyzed within Altgeld Gardens were within the historic district.		
3.19	7/26/21	A trip generation analysis was performed for the housing units previously located on CHA blocks 11, 12 and 13. These blocks have been demolished and will be the site of the proposed 130th Street station. In the AM peak, there would be 258 vehicles, and in the PM peak, there would be 331 vehicles.		
3.20	7/26/21	In comparison to the trips that would have been generated by the demolished blocks, the projected 2050 peak hour volumes were calculated for both the Build and No Build conditions. In the AM peak, the 2050 station generated traffic would be 421 vehicles and the 2050 total traffic for the build condition would be 717 vehicles. In the PM peak, the 2050 station generated traffic would be 394 vehicles and the 2050 total traffic for the build condition would be 565 vehicles. A two-lane street, such as Greenwood Avenue, typically can accommodate 1,600 vehicles per hour before additional lanes are needed, and the 2050 Build traffic peak hour volumes are much lower than the 1,600 vehicles per hour.		

Item No.	*Date*	*Item Description*	*Responsibility/ Status*	*Due/Closed Date*
3.21	7/26/21	Of the 8 analyzed intersections within Altgeld Gardens, only the 130th Street and Ellis Avenue intersection is signalized, and the remaining 7 intersections are controlled by stop signs. Intersection Level of Service (LOS) was assigned for each of the 8 intersections for the Build and No Build conditions for the AM and PM peaks, grading the operations of an intersection from A to F. LOS A is free flowing traffic with almost no delay, and LOS F is congested with delays affecting all drivers. All 7 unsignalized intersections have no change to the LOS from the No Build to Build 2050 forecasted conditions, all remaining at LOS A. The signalized intersection at 130th Street and Ellis in the PM peak would change from LOS B to LOS C, which is the Chicago DOT target LOS for dense urban settings.		
3.22	7/26/21	Mitigations are proposed at the intersection of 130th Street and Ellis Avenue due to the change in LOS. Ellis Avenue is under CDOT jurisdiction, and 130th Street is under IDOT jurisdiction. Proposed mitigations included signal timing adjustments and extending the eastbound right turn lane and westbound left turn lanes along 130th Street, which is outside the historic district.		
4.00	**Additional Station Access Concepts**			
4.01	7/26/21	As part of ongoing coordination with local project stakeholders and to support information-gathering for the Transit-Supportive Development (TSD) Plan, CTA has been conducting informational interviews with community members. At a recent informational interview, TCA Health, a stakeholder located north of the proposed station, disclosed that an 8,000 SF expansion of the facility is being planned within the existing TCA Health parcel to create a healthy food hub. TCA Health expressed the desire for improved connectivity of their facility to the community and asked CTA for additional information about the proximity of the station garage to their parcel, future station circulation, and parking. The TSD Plan team previously recommended that potential development areas would be more viable closer to 130th Street, north of the garage, to provide better visibility than a location more internal to the Altgeld Gardens neighborhood.		
4.02	7/26/21	CTA explored refinements and additional station access concepts with consideration to potential development site identified by the TSD Plan team, the TCA Health proximity to the station and planned expansion, and revising the station area access connections to bring the access closer to residents. Two alternate concepts were presented for review. The options have not yet been shared with the project stakeholders. Coordination with TCA Health and other stakeholders is ongoing.		
4.03	7/26/21	In both of the alternate options, the garage height was increased by one story (from 3 to 4 levels) to reduce the footprint at the north end of the parcel but maintain the same parking capacity, and 130th Place would be closed. The visual impacts of the taller parking garage on Altgeld Gardens and the forest preserve would need to be assessed and disclosed.		
4.04	7/26/21	The roadway connecting Old 130th Street to the station would be shifted east in both options, reducing the amount of TCA Health property needed for the roadway. However, a longer protective barrier would be needed between the roadway and the at-grade RLE tracks.		
4.05	7/26/21	The bus turnaround in both options would be connected to 132nd Street for the bus route that will access the station from the southwest. This was considered after the current concept was developed but could be incorporated into the current concept pending further evaluation.		
4.06	7/26/21	All other station components in the alternate concepts would remain unchanged from the current concept.		

Item No.	*Date*	*Item Description*	*Responsibility/ Status*	*Due/Closed Date*
4.07	7/26/21	Option 1: A new 131st Place vehicle access would be opened south of 130th Place at the new north face of the parking garage. More room would be preserved for the TCA Health expansion and would provide opportunities for improving the connection to the neighborhood. The garage internal circulation would need additional verification with the shift of the vehicle access roadway. Impacts to on-street parking along the east side of Greenwood Avenue would be more than the current concept, but less than in Option 2. On-street parking would be restricted between Ellis Avenue and 131st Place. A new curb cut would be required on Greenwood Avenue for the connection to 131st Place, and the east curb of Greenwood is included in the historic district boundary. Roadway use and capacity would need additional evaluation to determine if on-street parking could be retained along Greenwood Avenue.		
4.08	7/26/21	Option 2: The station entrance would be shifted further south to 132nd Place, at a location at the midpoint of the west face of the parking garage. Buses would enter and exit at 132nd Place, and cars would enter at 132nd Place but could exit either at 132nd Place or north to Old 130th Street. Slightly more space would be provided at the north end of the parcel in this option than in Option 1. A new roadway access point would be created on Greenwood Avenue, closer to the residences; this new access point would re-utilize an original feature of the property, a historical curb cut that was filled in when Block 11 was demolished. Station-related traffic would be brought further into the Altgeld Gardens historic district, and the change in the garage entrance location may require modifications to the internal garage circulation patterns and layout. On-street parking would be restricted along the east side of Greenwood Avenue between Ellis Avenue and 132nd Place.		
4.09	7/26/21	SHPO noted that the current concept and Option 2 would be equivalent in the number of curb cuts affected. Option 1 would introduce a new curb cut in the historic district, exiting vehicles would be shining headlights into the end residential unit, and was not desirable.		
4.10	7/26/21	CTA confirmed that all alternatives were feasible and not cost-prohibitive, but cost estimates have not yet been developed.		
4.11	7/26/21	SHPO noted that community input would be needed on the options presented. These options have not yet been presented to the public, as CTA is still in an exploratory phase for the alternate concepts. Community members have previously expressed concerns with traffic, and CTA has endeavored to minimize traffic impacts to the community through the designs.		
4.12	7/26/21	Restrictions in parking along the east side of Greenwood Avenue could be considered to increase the lane width for the segment of Greenwood that would experience heavier two-way traffic, including buses, between Ellis Avenue and the station entrance. This would be considered for the current and alternate concepts but would affect different lengths of Greenwood depending on the location of the station entrance.		
5.00	**Discussion**			
5.01	7/26/21	Even with the additional information presented, although SHPO would likely find no adverse effect on Altgeld Gardens, SHPO would not be able to make a determination until more design details were finalized, specifically whether a left turn lane would be needed on Greenwood Avenue into the station or if the community opposed any of the options.		
5.02	7/26/21	Based on the traffic analyses performed, the volume of opposing through movements on Greenwood Avenue would not warrant a separate left turn lane on Greenwood Avenue into the station access.		

Item No.	***Date***	***Item Description***	***Responsibility/ Status***	***Due/Closed Date***
5.03	7/26/21	SHPO confirmed that other than the potential impacts of the parking garage height, there was no significant difference between the current concept and Option 2.		
5.04	7/26/21	TCA Health intended to add only 20 new parking spaces for the expansion, therefore only modest changes in traffic from the TCA Health expansion are anticipated.		
5.05	7/26/21	SHPO requested renderings of the taller 4-level parking garage to review the visual impacts, and SHPO believed that CPs would be interested in these renderings as well. SHPO noted that the parking garage height would be an indirect effect.	CTA	
5.06	7/26/21	SHPO noted that the proposed 131st Place intersection in Option 1 was undesirable because this intersection would be across from residences, and headlights from waiting cars would shine into homes. The current concept and Option 2 would avoid this situation.		
5.07	7/26/21	SHPO offered to provide a letter stating which elements of each option would meet the Secretary of the Interior (SOI) Standards for a no adverse effect.	SHPO	
5.08	7/26/21	CTA confirmed that traffic studies and analyses results for the alternate concepts would remain unchanged from the current concept.		
Please notify the author of the minutes of any corrections and/or clarifications within five (5) business days, otherwise minutes will be considered final.

200 W. Adams St., Suite 320
Chicago, IL 60606-5253

Dear Mr. Ciavarella:

Thank you for the Layout and Access Concepts presentation and meeting on July 26, 2021 and for the revised renderings received on July 29, 2021. According to the presentation, the traffic analyses indicate that Greenwood Avenue, which is a contributing element within the boundaries of the Altgeld Gardens-Phillip Murray Homes Historic District (AGPMH), will not require widening or the addition of a left-turn lane as a result of the new station. This office finds that providing vehicular access to the new station from East 132nd Street, which is outside the AGPMH, meets The Secretary of the Interior's "Standards for Rehabilitation and Guidelines for Rehabilitating Historic Buildings" (Standards) across all options.

The Base Option meets the Standards and will not adversely affect AGPMH. We find that the 3-story parking garage and schematic station design do not pose an adverse visual effect. Although AGPMH was designed for the automobile, and on-street parking defined and continues to define the historic character of the district, we accept that the Base Option will eliminate on-street parking on Greenwood Avenue for the one block between Ellis and 130th Place, which will be the new access road to the station.

Option 2 may meet the Standards and may not adversely affect AGPMH. We find that the 4-story parking garage and schematic station design do not pose an adverse visual effect. This option places the entrance to the station at the historic curb into the original parking lot in Block 11 and creates 132nd Place. While we understand that placing the station entrance at 132nd Place means eliminating two blocks of historically appropriate on-street parking and bringing traffic deeper into AGPMH, we will accept Option 2 as meeting the Standards and not adversely affecting AGPMH as long as the residents of AGPMH are also in favor. Option 1 does not meet the Standards because of the new curb cut and entrance into the new station at an inappropriate, non-historic location. As cars on the newly created 131st Place stop at Greenwood to turn right, their headlights will shine into the historic houses in Block 10, which is inappropriate.

Please contact CJ Wallace, Cultural Resources Coordinator, at 217/785-5027 or at Carol.Wallace@illinois.gov with any questions.

Sincerely,

Robert F. Appleman
Deputy State Historic
Preservation Officer

c: Marlise Fratinardo, Chicago Transit Authority

Meeting Minutes – Consulting Party Meeting #2, June 30, 2021

Meeting Minutes

Project: **Red Line Extension**
Meeting Purpose: **Consulting Party Meeting #2**
Date: **Wednesday, June 30, 2021**
Location: **Remote Meeting**
Time: **9:00 AM**

Chairperson: **Remote Meeting**

Attendees: (See Attached copy of Sign-in-Sheet)

Item No.	*Date*	*Item Description*	*Responsibility/ Status*	*Due/Closed Date*
1.00	**Introduction**			
1.01	6/30/21	Federal agencies are required to consider effects of federally funded projects on historic properties through the Section 106 process. Consulting Party (CP) Meetings provide an opportunity for all CPs to provide input through the Section 106 consultation process.		
1.02	6/30/21	The goal of this process is to identify historic properties potentially affected by the project and assess the effects of the project on these properties.		
1.03	6/30/21	This meeting will summarize the findings from the draft Effects Report and updated Eligibility Report that were provided for CP review in advance of this meeting.		
1.04	6/30/21	Definitions of key terms and ground rules were reviewed.		
2.00	**Part 1: Review of 2021 Eligibility Findings**			
2.01	6/30/21	In May 2021, the position of the 130th Street station was refined to avoid the use of a parcel owned by the Forest Preserves of Cook County (FPCC) to the east. This resulted in the station shifting approximately 350ft northwest, but the proposed station components and access points would be the same as was previously presented.		
2.02	6/30/21	As a result of the 130th Street station refinement, there was a corresponding shift of the project APE approximately 350ft northwest. The Eligibility Report has been updated to reflect this change, and the draft Effects Report includes the updated APE.		
2.03	6/30/21	The Draft Eligibility Report included 60 historic properties, and the Illinois State Historic Preservation Office (IL SHPO) concurred with the eligibility recommendations for properties 1-11 and 13.		
2.04	6/30/21	Properties 14-19 are within the Altgeld Gardens Philip Murray Homes Historic District, which has already been confirmed by IL SHPO through the National Register of Historic Places (NRHP) nomination. All properties within the Altgeld Gardens Philip Murray Homes Historic District are NRHP eligible under Criteria A, B and C. Due to the refinement of the 130th Street station location, two additional commercial buildings (Properties 19 and 20) have been added.		
2.05	6/30/21	Property 12 is George Williams Curtis Public School, which has been reevaluated for eligibility per CP request and is now being recommended as eligible under Criterion C for association with W. August Fiedler, an architect for the Chicago Board of Education. This recommendation is subject to review and concurrence with IL SHPO.		
2.06	6/30/21	Based on the 130th Street station refinement, there are currently 73 total historic properties within the project APE, an increase over the 60 historic properties previously identified prior to the station refinement.		

3.00	**Part 2: Effects Evaluations**			
3.01	6/30/21	The evaluation of effects is the third step of the Section 106 consultation process. If adverse effects are found, the next step will be resolution of adverse effects.		
3.02	6/30/21	Criteria for determining adverse effects, established by the National Historic Preservation Act, are based on whether an undertaking may directly or indirectly alter the characteristics of a historic property that would qualify the property for inclusion on the National Register in a manner that would diminish the integrity of the property's location, design, setting, materials, workmanship, feeling or association.		
3.03	6/30/21	An adverse effect finding occurs when one or more of the following criteria are met: physical destruction or damage; alteration not following the Secretary of Interior's Standards; removal of the property from its historic location; new elements that diminish the integrity of the property's significant features; change to the property's use, physical features, or setting that contribute to its significance; neglect of a property causing deterioration; or transfer, lease, or sale of property without conditions to ensure long-term preservation.		
3.04	6/30/21	Effects can be direct, such as visual or audible elements, or indirect, (such as future developments), and effects can be cumulative.		
3.05	6/30/21	If adverse effects are found, the Federal Transit Administration (FTA) will consult with IL SHPO and the CPs to develop and evaluate alternatives or modifications to the undertaking that would avoid, minimize or mitigate the adverse effects on the historic properties.		
3.06	6/30/21	In the Draft Environmental Impact Statement (EIS), historic properties were identified for the East and West UPRR alignment options. FTA and CTA in consultation with IL SHPO and other CPs determined there were no adverse effects found in the Draft EIS.		
3.07	6/30/21	With the selection of the Preferred Alignment and the recent refinement of the 130th Street station location, the current effects evaluation, including a reevaluation of findings of the Draft EIS findings and an evaluation of properties in the expanded APE, found no adverse effects for properties within the project APE. All preliminary findings are subject to IL SHPO concurrence, and CPs will have an opportunity to review and comment.		
3.08	6/30/21	The Draft EIS noise and vibration analysis found that the project would result in no noise or vibration impacts due to construction, no permanent vibration impacts, and no permanent noise impacts after mitigation. Mitigations would consist of the construction of an approximately 4ft high noise barrier on the elevated structure.		
3.09	6/30/21	No noise impacts were found near the 130th Street station, therefore no mitigation measures would be required. Noise impacts from future train operations was assessed at four representative sensitive receiver locations near the refined 130th Street station location.		
3.10	6/30/21	No vibration impacts were found near the refined 130th Street station location, as the sensitive residential and institutional receivers would not be within the FTA vibration impact screening distances.		
3.11	6/30/21	Construction activities will not exceed the FTA recommended construction noise limits. Construction equipment can be operated without risk of damage to buildings from vibrations.		
3.12	6/30/21	Based on the SHPO direction, project alignment refinement, and 2019 court rulings on direct versus indirect effects, the Draft EIS effect findings have been reviewed and updated.		
3.13	6/30/21	The project would result in visual changes along the Preferred Alignment and temporary changes to vibration, noise and traffic patterns during construction. Although there would be both direct and indirect effects on the historic properties, none of these effects would compromise the integrity of the historic properties, nor diminish the qualities that would qualify them for inclusion in the NRHP.		
3.14	6/30/21	Each historic property within the project APE and its corresponding effects was reviewed.		

3.15	6/30/21	In response to the 2021 Eligibility Report, SHPO provided a letter that noted that because of the relocation of the 130th Street station south of 130th Street, the 2017 concurrence that Altgeld Gardens would not be adversely affected by this undertaking has been rescinded. SHPO will continue to review the RLE project's effects on Altgeld Gardens.		
3.16	6/30/21	A reevaluation of effects on the Altgeld Gardens Historic District was performed.		
3.17	6/30/21	Altgeld Gardens is currently in the process of being listed in the NRHP under Criteria A, B and C.		
3.18	6/30/21	A history of the Altgeld Gardens and Philip Murray Homes was described. This development was planned on a curvilinear street system that provided public and private transportation throughout the community and with residential buildings surrounding a core of community facilities. Altgeld Gardens was intended to be a city within a city because of its isolated location and is historically significant for its planning.		
3.19	6/30/21	The boundary of the Altgeld Gardens Historic District has preliminarily been approved by SHPO. The proposed 130th Street station would be east of Greenwood Avenue, outside the preliminarily approved Altgeld Gardens Historic District boundary. This portion of Altgeld Gardens was excluded from the historic district boundary because of the lack of historic integrity since the buildings there were demolished. Because the proposed station would be adjacent to and visible from the Altgeld Gardens Historic District, there would be impacts to the district's integrity of setting. To minimize the effects on the historic district, a landscape buffer is planned between the station and the historic district. Despite the impacts to the historic district's integrity of setting, neither the integrity of the historic properties nor the architectural features that qualify them for listing in the NRHP would be affected.		
3.20	6/30/21	Altgeld Gardens was designed to accommodate traffic from cars, school buses and city buses. The RLE project would provide critical connections, access improvements, and public transit for Altgeld Gardens residents.		
3.21	6/30/21	There are no proposed changes to the geometry or location of streets within the historic district, and the project was designed to minimize the increase of traffic on roads within the historic district. Proposed traffic routing to the 130th Street station would only utilize Ellis Avenue from 130th Street to Greenwood Avenue, and Greenwood Avenue from Ellis Avenue to 130th Place, and this block of Greenwood Avenue only fronts commercial properties.		
3.22	6/30/21	A finding of no adverse effect is recommended for the Altgeld Gardens Historic District.		
3.23	6/30/21	Historic properties within Altgeld Gardens would all be eligible under the same criteria as the Altgeld Gardens Historic District. The 130th Street station parking garage would cause direct visual impacts to the residences and commercial buildings, which would impact the integrity of setting but not compromise the integrity of the buildings or architectural character that would qualify them for listing on the NRHP, therefore a finding of no adverse effect is recommended.		
3.24	6/30/21	Renderings from various historic properties near the corridor were presented to show the scale of the project. It was noted that the appearance of project elements in the renderings is intended to show scale of the project elements. Actual construction appearance may differ from what is shown in the renderings based on final designs.		
4.00	**Part 3: Discussion and Comments**			
4.01	6/30/21	Each CP was provided a chance to provide verbal comments regarding the updated eligibility and evaluation of effects for the historic properties.		

4.02	6/30/21	By the Hand Club, Altgeld-Murray had no comments and believed the RLE would have positive impacts to the communities, but requested clarification on Transit Oriented Development around the Red Line Extension. CTA noted that a Transit-Supportive Development (TSD) plan is being developed in conjunction with but separate from this project. TSD possibilities are being studied at each station area, community meetings have been held, and the process is ongoing to collect feedback from the community about future development desired around the station areas. By the Hand Club invited CTA to host a joint community meeting.		
4.03	6/30/21	The Chicago Housing Authority noted that the presentation was very thorough and had no comments at this time.		
4.04	6/30/21	Chicago Park District had no comment.		
4.05	6/30/21	Greater Roseland Chamber of Commerce noted that the presentation was thorough and requested clarification on the location of the parking garage at Michigan Avenue Station. There is a North and South option for the station, and in the North option, the parking garage would be on the vacant lot between Michigan Avenue and State Street north of the UPRR tracks. The Michigan Avenue Station layout is being coordinated with INVEST South/West on the same lot and in the area.		
4.06	6/30/21	The City of Chicago Historic Preservation Division Department of Planning (DPD) believed the presentation was very thorough and did not have questions.		
4.07	6/30/21	IL SHPO provided a comment via email on 6/17/21, concurring with all findings other than the no adverse effect finding on Altgeld Gardens. No finding for the Altgeld Gardens Historic District could be confirmed by SHPO for Altgeld Gardens because the 130th Street station has not yet been designed and the traffic impacts to the historic district roadways are not yet known. SHPO stated that this concern applies to the finding of effects for the historic district as a whole, not the individual properties within. SHPO was not concerned about noise or vibration impacts to the Altgeld Gardens Historic District. SHPO also suggested that the Roseland Pumping Station, Scanlon Elementary School, George William Curtis Public School and Carver Military Academy should be listed under Criterion A in addition to Criterion C, and Preservation Chicago agreed.		
4.08	6/30/21	Landmarks IL noted that development is important to the community. Three buildings within Altgeld Gardens are on Landmarks IL's 2021 Most Endangered List of historic places in Illinois, and Landmarks IL believed that these buildings could benefit from the CTA TSD efforts for redevelopment. School Building C, owned by Chicago Public Schools (CPS), is in the most immediate danger of demolition. CTA clarified that the TSD plan is meant to perform intensive research, collect community comments, and vet possibilities for TSD in the station areas. A listening session was held with CPS to explore possibilities of what could be incorporated into potential future TSD recommendations, including discussions about School Building C. Although CTA is developing the TSD plan and intends to facilitate the future development, CTA does not have the funds for the development efforts. Landmarks IL was concerned that the timing of the TSD efforts would not address the imminent demolition of School Building C, but Landmarks IL was supportive of the TSD efforts.		
4.09	6/30/21	Neighborhood Housing Services of Chicago did not have any comments.		

4.10	6/30/21	People for Community Recovery (PCR) requested clarification on the Altgeld Gardens Historic District boundary and NRHP nomination. Due to the loss of integrity of Blocks 11, 12 and 13 following demolition, SHPO agreed that the National Register historic district boundary would be along Greenwood Avenue and exclude the area east of Greenwood where the 130th Street station is being proposed. The Altgeld Gardens nomination for the NRHP is being prepared by MacRostie, on behalf of CHA, separate from the RLE project. However, because the boundary has direct impacts on the RLE project, some coordination between the nomination and the RLE project is required. SHPO restated that because traffic to the proposed 130th Street station is expected to use Ellis Avenue and Greenwood Avenue, which are within the historic district boundary, SHPO cannot make a determination of effects on the Altgeld Gardens Historic District until more detailed proposals are available for SHPO review.		
4.11	6/30/21	Preservation Chicago noted that Altgeld Gardens and the South Roseland Community are among the most endangered neighborhoods. Because of historical demolitions, Preservation Chicago was concerned about the preservation of the Altgeld Gardens buildings and encouraged CTA and other organizations to support the preservation of the historic buildings, particularly for the buildings facing demolition. Preservation Chicago also suggested that the portion of the Roseland community near the proposed Michigan Station be considered for nomination for the NRHP.		
4.12	6/30/21	The RLE Coalition believed the reports were succinct and detailed, and they believed that their concerns about the traffic along Greenwood Avenue to access the proposed 130th Street station and concerns about the preservation of School Building C and the retail building within Altgeld Gardens are being addressed. The RLE Coalition suggested that listing some of the properties slated for demolition as special use properties could attract a developer. PCR referenced a 1997 study where it was–envisioned that School Building C could be used as a vocational training center and that the former retail space could be used for a grocery store. PCR believed that a commercial developer could help these visions to be realized and will follow up with the RLE Coalition to coordinate.		
4.13	6/30/21	Rosemoor Community Association expressed interest in seeing additional renderings. The renderings provided in the Draft Effects Report were focused on the visual impacts from the historic properties, and additional renderings focused on the parking garages and station areas will be published in the environmental documents, including the Supplemental EA. A video created for the RLE project also shows the station and potential for development nearby. CTA will share the video link.	CTA	
4.14	6/30/21	TCA Health noted that the presentation was detailed and informative, and hearing the discussions was helpful. TCA Health indicated that they intend to provide comments by email.		
5.00	**Schedule and Next Steps**			
5.01	6/30/21	The process is currently in the review period for the materials that have been distributed to SHPO and the CPs.		
5.02	6/30/21	Written comments are being requested by 7/9/21, which is 30 days after the reports were provided to the CPs and SHPO for review. Comments should be addressed to Marlise Fratinardo (CTA).	SHPO/CPs	7/9/21
5.03	6/30/21	Once all comments are collected, a response to the comments will be prepared.		

Please notify the author of the minutes of any corrections and/or clarifications within five (5) business days, otherwise minutes will be considered final.

Consulting Party Meeting #2 Comments and Responses,

September 2, 2021

Summary of Consulting Party Comments and Responses

This document addresses comments received from consulting parties regarding the Red Line Extension (RLE) Project Draft Effects Report (dated June 2021). Based on the selection of the Preferred Alignment and other design refinements, the Chicago Transit Authority (CTA) undertook data collection and analysis to make recommendations regarding the Project's effects on historic properties under Section 106 of the National Historic Preservation Act (NHPA). The resulting Draft Effects Report served as a summary of and update to the Section 106 consultation, which began in 2012, for the RLE Draft Environmental Impact Statement (Draft EIS). The 2021 Draft Effects Report and revisions to the 2021 Eligibility Report were presented to the consulting parties, including the Illinois State Historic Preservation Office (SHPO), during a consulting party meeting on June 30, 2021. Comments and responses discussed during the consulting party meeting were recorded in meeting minutes. Written comments were received from the following organizations:

- Robert F. Appleman, Illinois SHPO
- Ward Miller, Preservation Chicago
- Lisa DiChiera, Landmarks Illinois
- Michael LaFargue, Red Line Extension Coalition (RLEC)

Written comments and corresponding responses provided by CTA are recorded below. Copies of the comments received in writing are included as **Attachment A** at the end of this summary.

Illinois SHPO

Comment: *The Roseland Pumping Station, Scanlan Elementary School, George William Curtis Public School, and Carver Military Academy should be considered eligible for the National Register of Historic Places under Criterion A as well as Criterion C at the local level of significance. The draft effects report specifies only Criterion C.*

Response: This determination by the SHPO will be included as a revision to the Eligibility Report and updated in the final Effects Report.

Comment: *The draft effects report asserts that the project will have no adverse effect on all the identified historic resources. Altgeld Gardens is one of the identified historic resources. We cannot concur that there will be no adverse effect to Altgeld Gardens. The project is within the cultural landscape of Altgeld, since a portion of Altgeld where houses were recently located will be under the proposed station and since Altgeld's historic streets that are in the historic district will serve as* *access roads to the station. How those streets will be treated within the district will be part of this project. The project isn't designed yet, so we don't know what its effects will be to Altgeld, let alone whether that effect will be adverse or not. We do, however, concur that there will be no adverse effects to the other identified historic resources in the Area of Potential Effect.*

Response: Further discussion between the Federal Transit Administration (FTA), SHPO, and CTA occurred on July 26, 2021 to address determination of effects at the Altgeld Gardens-Philip Murray Homes Historic District. The presentation, meeting minutes, additional renderings, and SHPO review letter will be included in the revised Effects Report.

Preservation Chicago

Comment: *It would be most appropriate for the CHA and CTA to figure a preservation plan for the Keck & Keck Retail Building and the nearby school buildings which have been mostly abandoned, by no fault of the community. This needs to happen, as there have been far too many broken promises and demolitions at Altgeld Gardens.*

We need to not only give the community better transportation, but also improve the quality of life for the residents of Altgeld. So, in the budget of this multi-million dollar transit project, lets [sic] plan on including the acquisition, renovation and reuse plans for these three structures at Altgeld, which remain in an embarrassing state of disrepair and neglect.

We at Preservation Chicago fully support the Red Line Extension project and are honored to be part of the Section 106 Process. However, we all need to help with efforts in these sometimes long-neglected communities where this massive transportation project is to be a part of. We need to look holistically at Altgeld Gardens, make good on past promises, and also help communities like the commercial intersections in Roseland and at 115th and Michigan, near these new train stations.

Response: While this recommendation is outside the scope of the RLE Project, CTA is supportive of any initiatives by CHA or CPS to preserve and/or redevelop these properties to benefit the AGPMH community. As stated in Consulting Party Meeting #2, a listening session was held with Chicago Public Schools (CPS) to explore possibilities of what could be incorporated into potential future Transit-supportive development (TSD) recommendations, including discussions about School Building C. CTA is preparing the RLE TSD plan, which is intended to help identify opportunities for future development along the RLE corridor and particularly in areas near the RLE stations. CTA is not developing properties as a part of the RLE transit investment; however, input from community stakeholders will continue to help shape the RLE TSD plan.

Landmarks Illinois

Comment: *As I stated during the meeting, my biggest disappointment is CPS' intention to demolish School Building C at Altgeld Gardens, which like the Shop "Up Top" Building, we believe will have more market opportunity than ever before to be reinvested in, rehabbed and reused with the planned Red line station at Altgeld Gardens and the planned listing of Altgeld Gardens in the National Register of Historic Places, which will enable use of federal and state historic tax credits for rehabilitation. The transit supported development plan for the new station area that CTA will undertake is exactly the type of assistance these historic buildings need and I commend the agency for integrating this planning process into the timeline. I request that CTA reach out to CPS regarding this important development plan process CTA will undertake with community input that will help find uses for existing parcels and buildings in the proposed station area. CTA should encourage CPS to defer demolition of School Building C so that the building may be part of this important station area planning evaluation.*

Information on School Building C and other vacant historic buildings at Altgeld that will benefit from CTA's station area planning process can be found here:

http://www.landmarks.org/wp-content/uploads/2021/04/Altgeld-Gardens.pdf

Response: While this recommendation is outside the scope of the RLE Project, CTA is supportive of any initiatives by CHA or CPS to preserve and/or redevelop these properties to benefit the AGPMH community. As stated in Consulting Party Meeting #2, a listening session was held with CPS to explore possibilities of what could be incorporated into potential future TSD recommendations, including discussions about School Building C. CTA is preparing the RLE TSD plan, which is intended to help identify opportunities for future development along the RLE corridor and particularly in areas near the RLE stations. CTA is not developing properties as a part of the RLE transit investment; however, input from community stakeholders will continue to help shape the RLE TSD plan.

Red Line Extension Coalition

Comment: *Per comments made by Landmarks Illinois, Preservation Chicago, Ms. Cheryl Johnson (Ms. Hazel Johnson's Daughter) and others during the meeting the Altgeld Gardens residential community and commercial buildings are considered one of the 7 Most Endangered Places in Chicago and there is historic significance of Altgeld being designed with a self-supporting community aspect. The Red Line Extension Coalition (RLEC) supports the interest in saving the Keck Retail Building and the nearby school building "C" which have been abandoned.*

I will share this letter with the Chicago Association of Realtors and share my personal support that the owners of these buildings, CHA and CPS, save them. If CHA and CPS cannot renovate these *properties, my suggestion is that they list, lease, or donate the buildings to a community-oriented developer to be repurposed. Repurposing ideas include an art (music/dance/art) facility, a job training center or an educational (pre-law, law enforcement, vocation training) facility or a museum (or area history, environmental…) etc.*

Response: While this recommendation is outside the scope of the RLE Project, CTA is supportive of any initiatives by CHA or CPS to preserve and/or redevelop these properties to benefit the AGPMH community. As stated in Consulting Party Meeting #2, a listening session was held with CPS to explore possibilities of what could be incorporated into potential future TSD recommendations, including discussions about School Building C. CTA is preparing the RLE TSD plan, which is intended to help identify opportunities for future development along the RLE corridor and particularly in areas near the RLE stations. CTA is not developing properties as a part of the RLE transit investment; however, input from community stakeholders will continue to help shape the RLE TSD plan.

Note: Michael LaFargue, representative for the RLEC, is also a member of "The 77" Chicago Association of Realtors, which is not a consulting party for this project. The letter he provided from "The 77" replicates that of the RLEC and has been included at the end of this document for record purposes.

Dear Mr. Ciavarella:

We have reviewed the Revised Eligibility Report and Draft Effects Report for the above referenced project. Our comments are required by Section 106 of the National Historic Preservation Act of 1966, as amended, and its implementing regulations, 36 CFR 800: "Protection of Historic Properties."

The Roseland Pumping Station, Scanlan Elementary School, George William Curtis Public School, and Carver Military Academy should be considered eligible for the National Register of Historic Places under Criterion A as well as Criterion C at the local level of significance. The draft effects report specifies only Criterion C.

The draft effects report asserts that the project will have no adverse effect on all the identified historic resources. Altgeld Gardens is one of the identified historic resources. We cannot concur that there will be no adverse effect to Altgeld Gardens. The project is within the cultural landscape of Altgeld, since a portion of Altgeld where houses were recently located will be under the proposed station and since Altgeld's historic streets that are in the historic district will serve as access roads to the station. How those streets will be treated within the district will be a part of this project. The project isn't designed yet, so we don't know what its effect will be to Altgeld, let alone whether that effect will be adverse or not. We do, however, concur that there will be no adverse effects to the other identified historic resources in the Area of Potential Effect.

Please contact CJ Wallace, Cultural Resources Coordinator, at 217/785-5027 or at Carol.Wallace@illinois.gov with any questions.

Sincerely,

Robert F. Appleman
Deputy State Historic
Preservation Officer

Subject:	RE: CTA Red Line Extension Section 106 Meeting #2: Follow-Up

Dear Marlise and All,

We at Preservation Chicago also concur with Landmarks Illinois and after taking part in numerous Section 106 meetings on Altgeld Gardens extending back to 2016 and 2017, when the complex of residential, community and commercial buildings was one of our "Preservation Chicago--Chicago 7 Most Endangered Places."

There were several good outcomes promised, including a preservation plan to preserve and renovate all of the housing units and retracting the plans to extend a large wide boulevard drive from 130th Street/Hazel Johnson Environmental Justice Way, to the river. This would have also destroyed a great number of the community buildings, and created a dangerous speedway to the Little Calumet River, which seemed ill-conceived from the start. Some of these community buildings which would have been destroyed were affiliated with the work of then President Barack Obama, and this was very important to recognize, and perhaps even more than ever now. Anyway, the promises and commitment to preservation and restoration were disappointingly never fulfilled—not even one bit!

Due to legal challenges residential Blocks 11, 12 and 13, comprising about 25+ structures, in which the CHA and the City agreed to be preserved and renovated for housing, suffered numerous delays and further deterioration. This resulted in a total demolition of 456 units and no promised renovations of community buildings, resulting in where we are today, with several buildings facing demolition. The loss of 456 housing units was at the time, unacceptable and even shameful in our eyes at Preservation Chicago, as there's such a great need to these types of units by so many in our city.

The site of these 456 units is now the site of the Red Line Extension Project and terminal, and the great scar from the removal of these hundreds and hundreds of housing units, in this area resulted in it being removed from the National Register document.

So, with all of this said and noted, and these promises and discussions ongoing for more than five years, it would be most appropriate for the CHA and CTA to figure a preservation plan for the Keck & Keck Retail Building and the nearby school buildings which have been mostly abandoned, by no fault of the community. This needs to happen, as there have been far too many broken promises and demolitions at Altgeld Gardens.

We need to not only give the community better transportation, but also improve the quality of life for the residents of Altgeld. So, in the budget of this multi-million dollar transit project, lets plan on including the acquisition, renovation and reuse plans for these three structures at Altgeld, which remain in an embarrassing state of disrepair and neglect.

We at Preservation Chicago fully support the Red Line Extension project and are honored to be part of the Section 106 Process. However, we all need to help with efforts in these sometimes long-neglected communities where this massive transportation project is to be apart of. We need to look holistically at Altgeld Gardens, make good on past promises, and also help communities like the commercial intersections in Roseland and at 115th and Michigan, near these new train stations.

We are partners with all of you and hope that historic preservation, noted as an important component in all of these recent discussions as a priority in tandem with this wonderful project, will finally be realized.

Thank you for the opportunity to share these histories and to help achieve these goals. We stand united with Landmarks Illinois, our City and our State Historic Preservation Agency to insure that we look holistically at the larger picture and achieve plans that are acceptable to all.

Thank you for your consideration of these ideas and suggestions to help communities along this new transit line—which will also be a long-overdue lifeline to jobs and services, while also greatly reducing travel times to the Far South Side Communities.

Sincerely,
Ward Miller

Subject: Re: CTA Red Line Extension Section 106 Meeting #2: Follow-Up

Marlise,

Thank you for the opportunity to comment.

As I stated during the meeting, my biggest disappointment is CPS' intention to demolish School Building C at Altgeld Gardens, which like the Shop "Up Top" Building, we believe will have more market opportunity than ever before to be reinvested in, rehabbed and reused with the planned Red line station at Altgeld Gardens and the planned listing of Altgeld Gardens in the National Register of Historic Places, which will enable use of federal and state historic tax credits for rehabilitation. The transit supported development plan for the new station area that CTA will undertake is exactly the type of assistance these historic buildings need and I commend the agency for integrating this planning process into the timeline. I request that CTA reach out to CPS regarding this important development plan process CTA will undertake with community input that will help find uses for existing parcels and buildings in the proposed station area. CTA should encourage CPS to defer demolition of School Building C so that the building may be part of this important station area planning evaluation.

Information on School Building C and other vacant historic buildings at Altgeld that will benefit from CTA's station area planning process can be found here:
http://www.landmarks.org/wp-content/uploads/2021/04/Altgeld-Gardens.pdf [landmarks.org]

We look forward to further design development of the proposed Red Line station and to CTA's kickoff with the Altgeld community of the transit supported development planning.

Thank you again,

Lisa DiChiera

July 8, 2021 (Update)

To: Marlise Fratinardo, Ladies and Gentlemen of CTA's "Section 106" Committee

From: Michael LaFargue Member CTA "Section 106" Landmarks Committee

Thank you for the opportunity to participate on the CTA 106 Landmarks Committee.

Per comments made by Landmarks Illinois, Preservation Chicago, Ms. Cheryl Johnson (Ms. Hazel Johnson's Daughter) and others during the meeting the Altgeld Gardens residential community and commercial buildings are considered one of the 7 Most Endangered Places in Chicago and there is historic significance of Altgeld being designed with a self-supporting community aspect. The Red Line Extension Coalition (RLEC) supports the interest in saving the Keck Retail Building and the nearby school building "C" which have been abandoned.

I will share this letter with the Chicago Association of Realtors and share my personal support that the owners of these buildings, CHA and CPS, save them. If CHA and CPS cannot renovate these properties, my suggestion is that that they list, lease, or donate the buildings to a community-oriented developer to be repurposed. Repurposing ideas include an art (music/dance/art) facility, a job training center or an educational (pre-law, law enforcement, vocation training) facility or a museum (of area history, environmental…) etc.

Altgeld Gardens is a neglected community that requires better transportation and an improved the quality-of-life plan for the residents.

Thank you is advance for consideration of committee member ideas. I ask for CTA's support, backing and suggestions to assist communities along the RLEP are long-overdue a safety line for jobs and services on the Far South Side of Chicago.

I may be contacted at 773.251.0760 or michael.lafargue@cbexchange.com.

Sincerely,

Michael E. LaFargue

To: Marlise Fratinardo Ladies and Gentlemen of the CTA “Section 106” Committee

From: Michael LaFargue

Thank you for the opportunity to participate on the CTA 106 Landmarks Committee

I am the appointed community representative of ROSELAND and RIVERDALE for the Chicago Association of Realtors’ (CAR) Diversity Committee, "The 77."

"The 77" tackles real estate and community issues as Fair Housing, encouraging economic development, engaging with chambers of commerce boards, and liaising with local public officials... As a designated representative I filter information into CAR, as it relates to fair housing and economic development, as well as engage with local chambers of commerce, community organizations and quasi-governmental bodies (i.e., TIF Boards)

Per comments made by The Landmarks Illinois, Preservation Chicago, Ms. Cheryl Johnson (Ms. Hazel Johnson’s Daughter) and others during the meeting regarding the Altgeld Garden residential, community and commercial buildings being one of the 7 Most Endangered Places in Chicago, the historic significance of Altgeld being a community self-supporting community and community members interest in saving the Keck Retail Building and the nearby school building “C” which has been abandoned.

I will share this letter with the Chicago Association and share my personal support that the owners of these building CHA and CPS save them. If CHA and CPS cannot renovate these properties, my suggestion is that that they list, lease, or donate the buildings to a community-oriented developer to be repurposed into an art (music/dance/art facility) or a job training center or an educational (pre-law, law enforcement, vocation training) or museum (area history…) oriented facility.

Altgeld is a neglected community than requires better transportation and an improved the quality-of-life plan for the residents of Altgeld.

Thank you is advance for consideration of the committee member ideas. I ask for CTA’s support, backing and suggestions to help all communities along the RLEP as a long-overdue safety line for jobs and services for Far South Side of Chicago.

Sincerely,

Michael E. LaFargue, Associate Managing Broker. RCC, RPA, MBA-MPA

Marlise-

Thanks for your hard work on the Red Line extension. CHA just wants to clarify a few items:

> CHA is excited to partner with the CTA to ensure that the proposed future Red Line extension benefits residents of Altgeld Gardens. CHA recognizes the need for additional resources for families living in this community. CHA has cooperated with the CTA's assessment process to determine whether the final station of the Red Line extension can be on CHA-owned land in the hopes that this will provide CHA residents with greater access to transportation and economic development opportunities.
>
> CHA would like to clarify that there are buildings on the site that CHA does not own, such as the privately-owned commercial building (referred to as the Keck and Keck building) and the Chicago Public Schools' building known

as Building C. These buildings' conditions have significantly deteriorated in recent years. Like others, CHA would like to see those owners work to bring uses to those buildings that benefit community residents.

In July 2020, CHA engaged consultants Studio ARQ and MacRostie Historic Advisors to assist with the nomination of Altgeld Gardens and Murray Homes to the National Register of Historic Places, and we anticipate this process lasting through the first quarter of 2022.

Have a great weekend.

Environmental Professional’s Statement

Environmental Design International inc. (EDI) prepared this Phase I Environmental Site Assessment (ESA) of the Red Line Extension Preferred Alignment located 11 miles south of the Chicago Business District (commonly referred to as the Loop) in the City of Chicago, Illinois (the Subject Property). This assessment was completed to comply with our subcontract agreement with T.Y. Lin International Great Lakes, Inc. (T.Y. Lin) dated March 20, 2020, who is the prime contractor selected by the Chicago Transit Authority (the Client) to provide professional services for Contract No. C19FC102326216, Red Line Extension Final EIS and Preliminary Engineering. The specific scope of services requested for this Phase I ESA was detailed in the RLE Final Environmental Impact Statement (EIS) and Preliminary Engineering, Scope of Services, Task 4.4 (a); which was provided as an attachment to the subcontract agreement between EDI and T.Y Lin. The Phase I ESA was completed generally following the American Society for Testing and Materials (ASTM) International Standard E1527-13, Standard Practice for Environmental Site Assessments (the Practice). Section 1.1.4 of the report presents the limiting conditions and exceptions from the practice. Based on the requested scope of services, the Phase I ESA does not meet the requirements for all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

The conclusions stated in this Phase I ESA represent EDI’s professional judgment based on information and data readily available at the time of preparation, EDI’s scope of services, EDI’s observations made at the time of the site reconnaissance, as well as information provided by the Client and others. In preparing this Phase I ESA, the standard of care for all professional services performed or furnished by EDI was the skill and care used by members of EDI’s profession practicing under similar circumstances at the same time and in the same locality. EDI makes no warranties, express or implied, in connection with EDI’s services.

Report Preparer: Sydney Miller, Environmental Scientist

Environmental Professional: Jason Janssen, QA/QC Manager

A summary of our qualifications is included in Appendix G.

Executive Summary

At the request of the Chicago Transit Authority (the Client), Environmental Design International inc. (EDI) performed a limited Phase I Environmental Site Assessment (ESA) of the Red Line Extension Preferred Alignment located 11 miles south of the Chicago Business District (commonly referred to as the Loop) in the City of Chicago, Illinois (the Subject Property). The Subject Property extends along an approximately 5.6-mile corridor from the existing 95th Street Terminal to 132nd Street. The Executive Summary provides a summary of the findings of this Phase I ESA. It should be noted that although the Executive Summary is an integral part of a report, it does not substitute for reading the entire report. The complete report must be read in its entirety to obtain a more complete understanding of the findings and potential environmental concerns associated with the Subject Property, as well as to aid in any decisions made or actions taken based on this information.

Conclusions

EDI performed a Phase I ESA of the Subject Property generally following the American Society for Testing and Materials (ASTM) International Standard E1527-13, Standard Practice for Environmental Site Assessments (the Practice). Section 1.1.4 of the report presents the limiting conditions and exceptions from the Practice.

The following conclusions have been made in relation to the Subject Property and are summarized in Tables ES-1 through ES-6. It should be noted that an identification number was assigned to each geographically discrete condition identified in Tables ES-1 through ES-6. This was done to allow the user the ability to identify the approximate location of the discrete condition in the noted corresponding figure. Certain conditions were found in broad areas throughout the Subject Property, or adjoining area, or that were not interpreted to be geographically discrete by EDI. In these instances, these conditions were not assigned an individual identification number. The assignment of identification numbers to conditions was done generally in a north to south fashion along the alignment and does not represent a ranking of the hazard, severity, or potential impact of the condition. The noted figures are presented at the end of the tables in this executive summary, as well as in Appendix A.

Recognized Environmental Conditions (RECs)

A Recognized Environmental Condition (REC) is defined by the Practice as the presence or likely presence of any hazardous substances or petroleum products in, on, or at the Subject Property: (1) due to a release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. A total of 26 on-site RECs and 18 off-site RECs were identified in connection with the Subject Property.

As noted previously, an identification number was assigned to each geographically discrete REC identified in Tables ES-1 and ES-2. This was done to allow the user the ability to identify the approximate location of the discrete condition in the noted corresponding figure. Certain conditions were found in broad areas throughout the Subject Property, or adjoining area, or that were not interpreted to be geographically discrete by EDI. In these instances, these conditions were not assigned an individual identification number. The assignment of identification numbers to conditions (RECs, CRECs, HRECs, and *de minimis*) was done generally in a north to south fashion along the alignment and does not represent a ranking of the hazard, severity, or potential impact of the condition.

On-Site RECs

Table ES-1 lists the on-site RECs that were identified in connection with the Subject Property.

Table ES-1: On-Site RECs

No.	Figure	Name	Description
--	--	Railroad Tracks	Railroad tracks were observed on and adjacent to the Subject Property throughout the area. These tracks exist at various locations on elevated embankments. The source of the fill material used to make the embankments is unknown. Most of these rail lines are also used to transport freight, which may include hazardous materials or petroleum products. Spills or releases that occurred on or along these tracks may have impacted the Subject Property. Railroad rights of way are also typically maintained using herbicides for weed control. The Client should be aware that routine application of herbicides over time may result in elevated concentrations of chemicals in the surface soil and/or surface run off. Furthermore, releases may have occurred from creosote treated railroad ties or coal ash releases from historic steam train operations. Therefore, the presence of railroad tracks is evidence of a REC.

No.	Figure	Name	Description
Subject Property – 103rd Street station to 111th Street station			
4	ES-1	403 W. 103rd Place	Historical Sanborn Fire Insurance (Sanborn) maps depict a fuel warehouse at the rear of this facility in 1950. The historical presence of a fuel warehouse at this facility is a REC.
5	ES-1	400 W. 103rd Place	Sanborn maps depict a coal yard at this facility from 1911 to 1950. The historical presence of a coal yard at this facility is a REC.
6	ES-1	B Van Dir Meer & Sons 400 W. 104th Street	Records from the City identified work permits issued in 1956 to inspect three 20,000-gallon fuel oil underground storage tanks (USTs) and to remove an unspecified number of existing tanks at this facility. No corresponding records indicating the three 20,000-gallon USTs have been removed were identified. Sanborn maps from this time period depict the facility with a building labeled fuel storage and coal yard. Sanborn maps from 1989 depict this facility as a junk yard. The historical presence of a junk yard, coal yard, and fuel oil tanks at this facility with tanks that may remain in the ground is a REC.
7	ES-1	Fred Syhora 401 W. 105th Street	This facility was identified with records for the installation and subsequent abandonment of four USTs. The tanks were reportedly installed in 1957 and consisted of two 15,000-gallon USTs with unspecified contents and two 3,500-gallon USTs for used motor oil. In 1970, two 15,000-gallon USTs and two 4,000-gallon USTs were reportedly abandoned in place by filling with sand. The reported presence of four abandoned USTs at this facility that may remain in place is a REC.
8	ES-1	10514 S. Stewart Avenue	Evidence of automotive and equipment repair was observed at this facility during the site reconnaissance. Automotive and equipment repair typically generate wastes in the form of waste oil and other waste fluids as well as handle and store some amount of petroleum products or hazardous materials such as fuels, oils, paints, solvents, and other grease and oils. The use of this facility for automotive and equipment repair is a REC.

No.	Figure	Name	Description
9	ES-1	Illinois Bell Telephone/ AT&T IL 413 W. 105th Street	Six USTs were reportedly installed at the facility between 1950 and 1974. Corresponding records for the removal of four USTs in 1988 were identified, along with a reported leaking UST (LUST) incident. As noted in the Hazardous Materials Technical Memorandum, dated August 21, 2013 and prepared by CWC Transit Group, the LUST incident relates to contamination from the four USTs removed in 1988. A review of the Illinois Environmental Protection Agency's (IEPA) online LUST database and document explorer database identified that a No Further Remediation (NFR) letter was issued for the LUST incident in March of 2005. Among the terms and conditions of the NFR letter, a land use restriction was specified, which noted that use of the facility was limited to industrial or commercial purposes. The issuance of an NFR letter for the LUST incident with land use restrictions would normally be considered evidence of a Controlled REC (CREC). However, the potential continued presence of two USTs in the subsurface at this facility is a REC.
9	ES-1	Cement Block Factory 10638 S. Stewart Avenue	This facility was identified as a cement block factory in the 1950 Sanborn map with a gasoline storage tank and five 50-foot-tall coal silos. Cement block factories typically use large quantities of concrete and aggregate, which is then mixed with water to form the blocks. The formed blocks are then cured in a kiln typically heated by coal or petroleum products. Aggregate used in cement block typically include sand, stone, and gravel. Blast-furnace slag, fly ash, and coal cinders have also been typically added to reduce the weight of the finished product. Historical sources indicate this facility was present from 1938 to the early 1960s. Cross-referencing Cook County records to the Sanborn maps indicates this facility was present at the noted address. The historical presence of a cement block factory is evidence of a REC.
10	ES-1	Midland Chemical Corporation/ Atlan Inc	This facility was identified with a history of four USTs, which may remain in place. City records indicate one 3,000-gallon UST and one 7,000-gallon UST were inspected in 1962. In 1975, one 2,000-gallon and one

No.	Figure	Name	Description
		400 W. 107th Street	4,000-gallon mineral spirits USTs were reportedly installed. No corresponding records of UST removals was identified. The 1989 Sanborn map notes a manufacturing facility with slag bin and several USTs. City records also identified a history of enforcement actions and inspections at the facility for the presence of "auto parts and oil on the ground." Observations during the site reconnaissance also noted evidence of auto related repair. The historical presence of manufacturing on the property with the reported presence of what appears to be four separate USTs at this facility and the reported issuance of violations for the presence of oil on the ground is a REC.
11	ES-1	407 - 411 W. 107th Street	This facility was identified as a coal yard in the 1950 Sanborn map with several gasoline storage tanks depicted. This facility was listed under several addresses in City records for complaints and subsequent inspections by City staff that appear to be related to what was a reported auto junk yard with complaints detailing that "the rear and side lots [are] filled with car parts and junk, and that a large quantity fluids and grease are present." The reported presence of an auto junk yard with large quantities of fluids and greases being present is a REC.
13	ES-2	Harris Transmission 410 W. 109th Street	The facility was identified in records as an automotive transmission repair shop from approximately 1991 to 2000. Automotive and equipment repair facilities typically generate wastes in the form of waste oil and other waste fluids as well as handle and store some amount of petroleum products or hazardous materials such as fuels, oils, paints, solvents, and other grease and oils. The reported historical use of the facility for auto repair operations is a REC.
Subject Property – 111th Street station to Michigan Avenue station			
14	ES-2	William Ransom Transport	The facility was identified with a record of one 6,000-gallon gasoline UST that was reported as removed with a corresponding LUST incident being reported in February 1999 and assigned incident number 990399. A review of IEPA records identified that 20- and 45-day reports were

No.	Figure	Name	Description
		352 W. 110th Street	submitted for the incident, but that no NFR letter has been issued. Based on the 45-day report, the UST appears to have been located south adjacent to the existing building. The reported presence of an open unresolved LUST incident for a gasoline release at the facility is a REC.
15	ES-2	340-350 W. 110th Place	This facility was identified as a contractor's yard in Sanborn maps from 1950 and 1989 with a gasoline storage tank and oil storage being noted. The historical presence of a contractor's yard with a tank and oil storage is a REC.
16	ES-2	Chatham Coal and Coke Co. 356 W. 111th Street	This facility was depicted as a coal yard in Sanborn maps from 1950. The historical presence of a coal yard is a REC.
26	ES-2	SRM Motors 11429 - 11439 S. Perry Avenue	The facility was identified in records as an automobile repair shop starting in the early 2000s. Observations during the site reconnaissance noted the continued presence of an auto repair facility at this location. The presence of auto repair operations at this facility since the early 2000s is a REC.
28	ES-2	Triangle Transmission 35 W. 115th Street	Records identified the presence of this automotive repair facility since at least 1977. Observations during the site reconnaissance noted the continued presence of this facility under the name Donald's Auto Repair. This facility was listed in the UST databases with record of two 1,000-gallon gasoline tanks that were reported as removed in 1999. An associated LUST incident was reported and assigned incident number 992324. A review of IEPA records identified that a 20-day report was filed, but that no NFR letter has been issued, and that the IEPA does not appear to consider the issue resolved. The presence of an automotive repair facility since at least 1977 and the unresolved LUST incident for a release of gasoline is a REC.

No.	Figure	Name	Description
31	ES-2	Cuter Sefer Oil 11521 S. State Street	The 1950 Sanborn map identifies this facility as a gas station with three USTs. This facility was identified in City records for one 1,000-gallon gasoline UST when a permit was reportedly issued to replace an existing tank in 1955. City records also identified a series eight inspections spanning from December 2013 to February 2015, which noted that the facility was a vacant city owned lot where fly dumping had previously occurred, and which had been cleaned up. The inspections were conducted to observe the lot for evidence of additional fly dumping, none of which was noted. The historical presence of gas station with three USTs at the facility, combined with a lack of records indicating the USTs were removed, as well as the reported history of fly dumping at the facility is a REC.
32	ES-2	Oak Park National Bank 11500 S. Michigan Avenue	This facility was identified in City records with a history of nine USTs. Records identified that a 315-gallon UST, one 1,000-gallon UST, and one 2,000-gallon UST were reportedly installed in May of 1958. Records further identified that one 2,000-gallon UST and five 300-gallon USTs were reportedly installed in March of 1959. Aerial photographs from this time period depict the construction of a strip mall at this location. The reported historic presence of USTs being installed at the facility, with no corresponding record of their removal, is a REC.
33	ES-2	Flair Cleaners/ Betty Bright Cleaners 11518 S. Michigan Avenue	This facility was identified as dry cleaning plant under several names from 1981 to 2003 and was a registered conditionally exempt small quantity generator (CESQG) of hazardous wastes. This facility was also listed in City records relating to complaints and inspections. A complaint was filed in August 2004 that the facility was “dumping used chemical solution into the sewers throughout the area.” Records also identified a series of eight inspections of the facility by city staff that were conducted between August 2002 and March 2007. Six of these inspections appeared to be

No.	Figure	Name	Description
			regular periodic inspections of the facility and did not report issues of concern. Two of the inspection were noted to be conducted in response to the above noted complaint. These inspections were conducted on August 3, 2004 and August 12, 2004 and did not report to find evidence of the illegal disposal of materials in the sewer behind the shop. Based on the above information, the historical presence of a dry cleaning plant is a REC.
Subject Property - Michigan Avenue station to 130th Street station			
38	ES-2	The Shedd Company 301 E. 117th Street	This facility was identified in Sanborn maps from 1911 and 1950 as a manufacturer of ice cream and in 1989 as a potato chip factory. Sanborn maps depict the facility with two USTs. This facility was listed in City records with a history of USTs. City records identified that one 1,000-gallon gas tank was reportedly replaced in 1948, one 4,000-gallon fuel oil tank was reportedly installed in 1956, and one 6,000-gallon fuel oil tank was reportedly installed in 1957. The reported presence of three USTs at the facility, combined with a lack of records indicating the USTs were removed, is a REC.
39	ES-2	American Clybourn Finishing 11730 S. Front Avenue	This facility as depicted in the 1989 Sanborn map as a metal finishing facility. The facility registered as a large quantity generator (LQG) of spent halogenated solvents used in degreasing (F001) in 1980. In 1995, the facility changed its status to a CESQG. The historic presence of a metal finishing facility that was a large quantity generator of spent solvents on the Subject Property for an apparent 15-year period is evidence of a REC.
40	ES-2	Stuart Chemical and Paint Inc. 11740 Front Street	This facility was identified in Sanborn maps from 1950 as a coal yard and paint factory in the 1989 map. This facility was noted as an apparent auto junkyard with bulk containers stored outdoors during the site reconnaissance. This facility was identified with a history of seven tanks. Six 1,000-gallon tanks and one 3,000-gallon tank were reportedly removed in January of 1990 and were reported to contain the following substances: toluene, xylenes, Stoddard solvent/naphtha, light aliphatic

No.	Figure	Name	Description
			solvent naphtha, ethyl acetate, methyl isobutyl ketone, and methyl ethyl ketone. A corresponding LUST incident from 1990 was noted. A review of IEPA records indicates that the LUST incident is unresolved and that the IEPA's review of investigations undertaken at the time requested further information. Based on the reported open status of the LUST incident and continued use of this facility as an apparent auto junkyard with bulk containers being observed during this site reconnaissance, this facility is a REC.
41	ES-3	Illinois Central Track 119th Street	This facility was listed in the Bureau of Land (BOL) database. A review of the provided database information and the IEPA's BOL online database identified that the facility was listed in the states solid waste program in 1986. Based on the historical use of this facility as a railroad and for railroad operations, this listing is considered evidence of a REC.
42	ES-3	All American Recycling/ Keywell Corp/ S.G. Keywell Co. 11900 S. Cottage Grove Avenue	This facility is a scrap metal recycling entity. Historical aerial sources appear to depict this facility starting in the 1950s, and observations during the site reconnaissance note its continued presence. However, it should be noted this facility appeared to extend past its present southwestern boundary and onto the Subject Property through the 1980s on what was most recently an asphalt plant operated by K-Five Construction. The facility was listed in the Integrated Compliance Information System (ICIS) database for a formal enforcement action for penalty in 2010. The enforcement action reportedly related to Toxic Release Inventory (TRI) reporting under the Emergency Planning and Community Right-to-Know Act (EPCRA). The facility was listed in the UST database with a history of two 2,000-gallon gasoline USTs reported as removed in 1990. The facility was also listed in the LUST database with a history of a gasoline release reported in 1990 and a diesel release reporting in 1994. A review of IEPA records

No.	Figure	Name	Description
			identified that an NFR letter was recorded in 1996 for the 1990 gasoline LUST incident with no noted requirements for engineered barriers or institutional controls. Records indicate that IEPA issued a non-LUST determination letter in 1994 for the diesel release. The facility was also listed in the SPILLS database for a spill non-LUST incident occurring on July 9, 2004. The facility was listed in the Resource Conservation and Recovery Act (RCRA) database as a CESQG in 1996 and Large Quantity Generator in 1992 of ignitable waste (D001) and corrosive waste (D002). The facility reportedly changed its status to non-generator in 2018. The historic and ongoing use of the facility for scrap metal processing, history of enforcement action for penalty, the facilities former status as a Large Quantity Generator of hazardous wastes, and the apparent presence of unremedied releases of diesel fuel, this facility is a REC.
44	ES-3	Elmer Larson, Inc./ K-Five Construction/ K Five Construction 12401 S. Cottage Grove Avenue/ 12500 S. Cottage Grove Avenue	This facility was operated as an asphalt plant from approximately 1987 through 2017. Based on historical aerials, this facility appears to have been built on former portions of the All American Recycling facility. City records noted the presence of berms as part of containment systems for aboveground storage tanks (ASTs) and an outdoor drum storage area, reported occurrences of fly dumping at or near the facility, and the reported presence of seven ASTs. The ASTs were identified as one 1,000-gallon diesel AST, one 8,000-gallon prime sealer AST, two 20,000-gallon used oil ASTs, one 14,000-gallon used oil AST, one 20,000-gallon AST identified as containing “asphalt/cement”, and one 2,000-gallon AST containing “Anti-Stripper.” During the site reconnaissance, a concrete containment structure with what appeared to be support saddles for the ASTs was observed.

No.	Figure	Name	Description
			The Tier 2 database identified that the facility stored or used reportable quantities of the following hazardous chemicals in 2010 and 2014: fuel oil, oil black, asphalt cements, emulsion 212, fatty acids, tall oil, polymers with glycerol, maleic anhydride, phthalic anhydride, and soybean oil. The reported use of this facility as an asphalt plant with records of at least seven ASTs of various size (that contained diesel fuel, used oil, and other products), as well as the reported use or storage various hazardous substances (fuel oil, oil black, asphalt cements, emulsion 212, fatty acids, tall oil, polymers with glycerol, maleic anhydride, phthalic anhydride, and soybean oil) in volumes sufficient to require Tier II reporting is a REC.
48	ES-3	Penn Central Corp./ Lake Calumet Quad 810 E. 124th Street	This facility was listed in the State Sites Unit Listing (SSU) and Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) databases. The SSU database listed this facility with ID number 0316490002. A review of IEPA records indicate that a slurry wall was proposed in the late 1980s to be used at the facility to control the movement of contaminants. The documents also indicate that almost $170,000 of funds were requested by the IEPA in 2004 to allow for Patrick Engineering, Inc. to conduct a site investigation. This facility was also identified on a map in a US Scrap documentation accessed through the IEPA's document explorer database, as well as in the Hazardous Materials Technical Memorandum prepared by CWC Transit Group and dated August 2013. The Hazardous Materials Technical Memorandum identified this facility as a hazardous waste dump site and that over 400,000 gallons of liquid waste were reportedly pumped from the basement of former on-site grain silos.

No.	Figure	Name	Description
			Given the apparent proposed slurry wall, reported historic use of the facility as a hazardous waste dump site, and requested funding for a site investigation in 2004, this facility is considered a REC.

Off-Site RECs

Table ES-2 lists the off-site RECs that were identified in connection with the Subject Property.

Table ES-2: Off-Site RECs

No.	Figure	Name	Description of REC
Off-Site RECs - 95th Street station to 103rd Street station			
1	ES-1	Shell Oil/ Mobile Gas & Food Mart/ Sims Arco 4 E. 95th Street Northeast of the Subject Property Approximately 350 feet from Subject Property	This facility was a gasoline service station. From historical aerials this facility was constructed in the 1970s and was operated as a gas station until about 2017, when the Office of the State Fire Marshal (OSFM) records indicate the Client purchased the facility. During the site reconnaissance, this facility no longer appeared to be in active use as a gas station. Records indicate the facility has a 12,000-gallon gasoline, 8,000-gallon gasoline, and 6,000-gallon diesel USTs. No corresponding records indicating the USTs were removed were identified from the obtained documents, and observations from the site reconnaissance indicate the USTs remain in place. The historical operation of this facility from the 1970s to about 2017 as a gas station with three USTs that remain in the ground is a REC.
3	ES-1	Abbott Park Fieldhouse 45 E. 95th Street Northeast of the Subject Property	The facility was listed in the LUST database for an 8,800-gallon heating oil UST removed in 1993. A review of the IEPA records identified that a pre-1974 letter was filed with the IEPA in 2007. Therefore, the release was exempted from the LUST regulations. Due to contamination from the LUST incident being allowed to apparently remain in place and no remedial action being required, the historical presence of a UST and LUST incident at the facility is a REC.

No.	Figure	Name	Description of REC
		Approximately 500 feet from Subject Property	
Off-Site RECs - 103rd Street station to 111th Street station			
17	ES-2	Roseland Tune Up Center 401 W. 111th Street West of the Subject Property Approximately 125 feet from the Subject Property	This auto repair facility was identified in records starting in the early 1980s. Observations from the site reconnaissance indicate the continued presence of an automotive repair facility with a three-bay garage. Therefore, this facility is a REC.
18	ES-2	Pentecostal Temple, Roseland Service Station 415-419 W. 111th Street West of the Subject Property Approximately 350 feet from the Subject Property	This facility was identified in records as a gasoline service station from approximately 1923 to 1928. The facility was listed in the LUST database for a used oil LUST incident on August 8, 1991, and a gasoline LUST incident on November 22, 1991. A review of IEPA records identified a letter from 2009, which essentially noted that the IEPA does not consider the LUST incidents resolved. The reported presence of open unresolved LUST incidents at the facility is a REC.
19	ES-2	Reiter Brothers 433 W. 111th Street West of the Subject Property Approximately 500 feet from the Subject Property	The facility was identified in records as a gasoline service station from the late 1920s to the 1970s. The historical presence of an auto service station for approximately 40 years is a REC.

No.	Figure	Name	Description of REC
Off-Site RECs – 111th Street station to Michigan Avenue station			
20	ES-2	CK Madderom Co. 355 W. 112th Street West of the Subject Property Approximately 100 feet from the Subject Property	This facility was depicted as a coal yard in Sanborn maps from 1911 and 1950. The historical presence of a coal yard is a REC.
21	ES-2	Sheldon Heights Service 332 W. 113th Street West Southwest of the Subject Property Approximately 100 feet from the Subject Property	The facility was identified in records as a gasoline station from at least 1950 to the 1970s. Sanborn maps from this period depict the facility with two gasoline USTs. No records indicating the USTs were removed were identified from the records obtained. The historical use of the facility as a gasoline station with two USTs is a REC.
27	ES-2	Abandoned Service/ City of Chicago/ Satriano Texaco Service 11500 S. Perry Avenue Southwest of the Subject Property Approximately 200 feet from the Subject Property	This facility was identified in records as a gasoline service station from at least the 1950 to 1993. One 6,000-gallon gasoline, two 5,000-gallon gasoline, and one 1,000-gallon used oil tanks were identified as having been removed in 2000 with a corresponding release of gasoline and used oil being reported. A review of IEPA records indicates that the LUST incident is apparently open and unresolved. The reported presence of an open unresolved LUST incident for the facility is a REC.

No.	Figure	Name	Description of REC
29	ES-2	Abandoned Gas Station/ Cox Donna 2 W. 115th Street Northwest of the Subject Property Approximately 160 feet from the Subject Property	This facility was identified with a record of one 4,000-galllon and one 3,000-gallon gasoline USTs, both of which are reported as removed. Two gasoline LUST incidents were reported, one in 1998 and a second in 2011. A review of IEPA records identified that pre-1974 letters were filed with the IEPA for both incidents. Therefore, the releases were exempted from the LUST regulations requiring cleanup. Therefore, the reported presence of two un-remediated gasoline LUST incidents at this facility is a REC.
34	ES-2	Trailer Factory/ Charter Bus Company 11575 S. Wabash Avenue Southwest of the Subject Property Approximately 70 feet from the Subject Property	This facility was identified in historical sources as a trailer factory with lacquer spraying operations by 1950. Observations during the site reconnaissance noted this facility was apparently used as an office and garage for a bus company. City records indicate that an inspection of the bus company was conducted in 2004 by City staff who reported to observe evidence of the illegal dumping of liquid wastes into the city stormwater sewer system. Obtained city records did not identify a corresponding record of enforcement action or complaints. Based on the historical use of this facility as a factory with lacquer spraying operations, the use of the property as an apparent bus garage with reported evidence of the illegal disposal of liquid wastes is a REC.
35	ES-2	Haney Khalil, Michigan Citgo/ Martin oil Service 11600 S. Michigan Avenue Southwest of the Subject Property	This facility was identified as a gasoline service station from at least 1970 to present day. The facility was listed identified with a history of a 12,000-gallon gasoline, 15,000-gallon gasoline, 12,000-gallon gasoline USTs listed as currently in use, and a 6,000-gallon kerosene UST that was reported as abandoned in place in 2017. A LUST incident corresponding to the abandonment to the kerosene UST was also noted. A review of IEPA records indicates the LUST incident is unresolved. Therefore, the operation of a gas station at this facility from at least 1970, with four USTs that remain in place and an unresolved release of kerosene is a REC.

No.	Figure	Name	Description of REC
		Approximately 280 feet from the Subject Property	
Off-Site RECs - Michigan Avenue station to 130th Street station			
43	ES-3	Bulkoa Inc./ Clean Harbors Env. Services/ Schneider Tank Lines/ Vacuum Industrial Pollution Intl/ Smith Systems Chicago Yard/ Unloading Unlimited/ Allwaste Tank Cleaning 11861-11901 S. Cottage Grove Avenue Northeast of the Subject Property Approximately 220 feet from the Subject Property	The facility was identified with a history of seven USTs that were reportedly removed in December 1997. A LUST incident was reported in 1997 for a release of diesel and gasoline. A review of IEPA records identified that an NFR letter was issued in 2003, which required institutional controls consisting of reliance of a groundwater ordinance and restricting use of the property to industrial or commercial purposes. IEPA records also identified that a Soil Vapor Extraction system was installed in 2001 at the facility to address the contamination from the release and was operated for a period of about 2 years. The facility was also listed under several different RCRA listings as a generator of hazardous waste, some with unique generator identification numbers but the same overall address and apparent physical location when reviewing historical aerials. Due to the overlapping RCRA listings, the exact status and history could not be readily determined. The facility apparently was mostly a small quantity generator of hazardous wastes, However, records identified Allwaste Tank Cleaning as a historic large quantity generator. Reported waste streams included ignitable (D001), corrosive (D002), reactive (D003), spent solvents (F001, F002, and F003), electroplating wastes (F006, F007), quenching oil bath residues (F010), quenching wastewater treatment sludges (F012), K-listed wastes (K001, K009, K010, K015, K016, K018, K019, K020, K021, K022, K023, K024, K027, K028, K030, K048, and K049), and U-listed wastes (U019, U055, U134, U140, U220, and U238). Given the reported history of this facility as an apparent generator of hazardous waste under a large variety of waste codes, this history of a gasoline and diesel fuel release with contamination allowed to remain in place

No.	Figure	Name	Description of REC
			subject to institutional controls, this facility is evidence of a REC.
45	ES-3	US Scrap/ U.S. Scrap/ U.S. Drum Disposal Co. 391 E. Kensington/ 123rd and Cottage Grove Avenue Southwest of the Subject Property Approximately 100 feet from the Subject Property	This facility is not currently listed as a National Priorities List (NPL) site for the U.S. Environmental Protection Agency's (USEPA) Superfund Program. However, the site was investigated by the USEPA for possible inclusion in the NPL starting in 1980. Records identify that the facility underwent several rounds of formal enforcement action with the USEPA starting in 1989 through at least 2013. Several actions were referred to the courts. USEPA records identified that the facility reportedly operated as an industrial chemical waste receiver from 1965 to 1975. From 1973 to 1975, the operator of the facility reportedly disposed of wastes at the facility and a related site. A landfill fire was reported at the facility in 1985, after which the USEPA conducted emergency response action, which reportedly involved excavating and removing "heavily contaminated soils" and drummed wastes from a railroad embankment on the facility. The response action reportedly only addressed a portion of the known buried wastes. A review of IEPA records identified a history of proposed investigations of the facility from 2004. A letter from the IEPA dated June 2005 to the USEPA requested a time-critical removal assessment be conducted at the facility as soil, water, and sediment samples reportedly still contained "high levels of pesticides and semi-volatile organic compounds (SVOC) contamination." Based on the reported historical use of the facility, with landfilling and burial of chemical related wastes, and the reported presence of SVOC and pesticide contamination remaining at the facility in the mid-2000s, this facility is a REC.
46	ES-3	Sherwin Williams Co.	This facility is not currently listed as a NPL site for the USEPA's Superfund Program. However, the site was investigated by the USEPA for possible inclusion in the

No.	Figure	Name	Description of REC
		11541 S. Champaign Avenue Northeast of Subject Property Approximately 500 feet from Subject Property	NPL. In 1994, a high corrective action priority was assigned by the USEPA. The facility was listed in the RCRA database as a Treatment, Storage, and Disposal (TSD) facility and Large Quantity Generator. The RCRA database listings identified a history of numerous wastes related to paint and coating production. The facility received several violations in the areas of records and reporting: final civil judicial action for compliance and/or monetary penalty, generators pre-transport, general, groundwater monitoring, financial requirements, permit application, container use and management, Land Disposal Restrictions (LDR) general, contingency plan and emergency procedures, tank system standards, federal or state statute, and closure/post closure. Institutional controls were established in 2012. Performance standards were attained with required controls in 2014. Remedy construction was planned for 2020. Due to the historic and active use of this facility for manufacturing paint and paint-related products, historic landfilling activities, and ongoing and planned remediation, this facility is considered evidence of a REC.
47	ES-3	Lake Calumet Smelting/ Inland Metals Refinery Company Incorporation 651 E. 119th Street/ 11901 S. Champlain Avenue Northeast of Subject Property Approximately 300 feet from Subject Property	IEPA records identify that this facility was operated as a smelters from 1948 until 1989 and note the confirmed presence of soil and groundwater impacts at the facility through sampling conducted in the 1990s. Records also identify that the facility is not currently listed as an NPL site in the USEPA's Superfund Program. However, the facility was evaluated for possible inclusion in the NPL. The facility was identified as a generator of hazardous waste containing lead (D008) and emission control dust/sludge from secondary lead smelting (K069). The RCRA listings identify that the facility received numerous violations in the late 1980s related to the operation of the site as a Treatment, Storage, Disposal (TSD) facility under the RCRA regulations. The facility was also historically identified as unpermitted and unauthorized solid waste disposal facility with a surface impoundment. IEPA records

No.	Figure	Name	Description of REC
			indicate this was used for the unauthorized disposal of wastes from the smelting process. Based on the reported presence of soil and groundwater contamination at the facility in the 1990s, the historic operation of this facility as a smelters, and the numerous RCRA violations reported in the 1980s, this facility is evidence of a REC in connection with the Subject Property.
50	ES-3	Cottage Grove Dump (No address provided) Northeast of Subject Property Approximately 175 feet from Subject Property	The facility was listed in the SWF/LF database as a historical landfill owned by the City and operated by the Department of Street and Sanitation. The location of the landfill was apparently reported using township and range information, so the exact location is unknown. The reported presence of a historic landfill in the vicinity of the site is evidence of a REC.
49	ES-3	MWRD Calumet Water Reclamation Plant 400 East 130th Street Southwest and northeast of Subject Property Southwest Adjoining Property	This facility is a wastewater treatment plant that services the southern portion of Cook County, which includes residential, commercial, and industrial areas. This facility reportedly conducts primary, secondary, and tertiary water treatment operations and treats 354 million gallons of wastewater on average per day. The facility also reportedly generates approximately 100 tons of dried solids every day from treating wastewater, which are managed on site. Numerous clarifiers, settling basins, and related structures were observed in aerial photographs and during the site reconnaissance. Historical records indicate the facility was established in the 1930s and was progressively expanded until sometime in the 1980s. The facility was also identified as operating landfills. The *Hazardous Materials Technical Memorandum* (CWC Transit Group 2013) identified that an inactive landfill was

No.	Figure	Name	Description of REC
			used for disposal of sand, gravel, and grit from sewage treatment. Surface samples that were reportedly collected indicated the presence of polychlorinated biphenyls (PCBs), chloroform, chlordane, chromium, lead, toluene, and 4,4-dichlorodiphenyldichloroethane (DDD). Given the reported volume of wastewater treated at the facility with the sources of wastewater entering the facility including commercial and industrial operations, the management of solids at the facility, and the reported presence of landfills, the presence of a wastewater treatment facility is a REC.
51	ES-3	Calumet NU Earth/ Calumet NU-Earth Dis 130th Street and Doty Avenue Northeast of Subject Property Approximately 200 feet from Subject Property	This facility was identified in records as a possible landfill. Records further identified that this facility is not currently listed as a NPL site for the USEPA's Superfund Program. However, the site was investigated by the USEPA for possible inclusion in the NPL in 1984 and 1985. The facility was archived by the USEPA in 1991. As this facility was identified as possible landfill, this listing is evidence of a REC.

Controlled Recognized Environmental Conditions (CRECs)

A Controlled Recognized Environmental Condition (CREC) is defined by the Practice as past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls. These controls may be, but are not limited to, institutional controls or engineering barriers that are intended to prevent exposure to hazardous substances or petroleum products allowed to remain in place. These controls may limit or restrict the use of a property. By definition, the Practice considers a CREC to also represent a REC, since residual hazardous substances or petroleum products may remain present in the subsurface.

One off-site CREC was identified in connection with the Subject Property. Table ES-3 lists the CREC identified in connection with the Subject Property.

Table ES-3: CRECs

No.	Figure	Name	Description of CREC
2	ES-1	Amoco 15459/ SS #15459/ Whalen Standard Services 36 W. 95th Street	The facility was a gasoline service station from the late 1960s to approximately 1997. The facility was identified with a history of three 10,000-gallon gasoline USTs that were reportedly removed in 1997. A gasoline LUST incident associated with the UST removal in 1997 was identified and an NFR letter closing the LUST incident was recorded in 2003. A review of IEPA records identified that the NFR letter included requirements for a highway authority agreement which extended party way into 95th Street and Lafayette Avenue. Based on the presence of an NFR letter, this listing is considered evidence of a CREC.

Historical Recognized Environmental Conditions (HRECs)

A Historical Recognized Environmental Condition (HREC) is defined by the Practice as a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the Subject Property to any required controls.

A total of three HRECs were identified in connection with the Subject Property. Table ES-4 lists the HRECs identified in connection with the Subject Property.

Table ES-4: HRECs

No.	Figure	Name	Description of HREC
24	ES-2	Marquette Bank/ Vacant Building	This facility was identified with a history of a 2,000-gallon gasoline UST reportedly removed in 2001 with a corresponding LUST incident being reported. An NFR letter was issued for the LUST incident in 2002. A review of the IEPA records did not identify any engineering or institutional controls in connection with the NRF letter. Based on the

No.	Figure	Name	Description of HREC
		133-139 W. 114th Street	reported status of the NFR letter, with no noted requirements for institutional controls or engineered barriers, this facility is considered evidence of a HREC.
30	ES-2	Tadros Musa/ Goodyear Auto Service 11442 S. Michigan Avenue	This facility was identified with a history of one 500-gallon used oil tank that was reported as removed in 1996. A corresponding LUST incident was reported and was issued an NFR letter in 1998. A review of IEPA records did not identify any requirements for engineered barriers or institutional controls. Based on the reported status of the NFR letter, with no noted requirements for institutional controls or engineered barriers, this facility is considered evidence of a HREC.
36	ES-2	Clark Service Station/ Bobs Super 100/ Clark Oil and Refining 11555 S. Michigan Avenue	The facility was identified a gasoline service station with a history of two 6,000-gallon gasoline and one 7,500-gallon gasoline UST reportedly removed in 1991. A gasoline LUST incident was also reported in 1991. An NFR letter was recorded in 1995. A review of the IEPA's online LUST database did not identify any requirements for engineered barrier or institutional controls with the NFR letter. Based on the reported status of the NFR letter, with no noted requirements for institutional controls or engineered barriers, this facility is considered evidence of a HREC.

De Minimis Conditions

A *de minimis* condition is defined by the Practice as a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis* conditions are not RECs and are not CRECs.

A total of six *de minimis* conditions were identified in connection with the Subject Property. Table ES-5 presents the *de minimis* conditions that were identified in connection with the Subject Property.

Table ES-5: *De Minimis* Conditions

No.	Figure	Name	Description of *De Minimis* Condition
--	--	Small auto-related spills	Site reconnaissance observations noted the presence of numerous minor staining on the paved parking and drive areas located on and adjacent to the Subject Property. The stains appear to be the result of leakage of automobile-related fluids and not the result of a large-scale spills.
--	--	Household wastes	Site reconnaissance observations identified small piles or loose trash of apparent household-related wastes that were “fly dumped” throughout the Subject Property. The observed materials did not appear to be evidence of systematic landfilling of wastes.
12	ES-2	405 W. 108th Street	Site reconnaissance observations identified two empty plastic 55-gallon drums on the ground. The drums appeared to have been fly dumped within a larger vacant grassy area on the property. The drums were located on an area of ground that appeared to have been disturbed and that was not supporting vegetative growth.
23	ES-2	11336 S. Yale Avenue	This address was listed in City records for an inspection occurred on February 4, 1998 at the facility where city staff observed a large open fire in the rear yard and a work crew removing roofing materials and disposing of it by burning. Two citations were reportedly issued. A review of Cook County Assessor records identifies this facility as a single-family home. Based on the above information, this listing is considered evidence of a *de minimis* condition.
25	ES-2	Clearwater Technology 11426 S. Perry Avenue	The facility is a former generator of hazardous waste but was not reported as a LQG of hazardous waste. The facility generated the following wastes: chromium (D007), benzene (D018), barium (D005), lead (D008), methyl ethyl ketone (D035), ignitable waste (D001), corrosive waste (D002), and halogenated solvents (F001). No records of violations were noted with the listing. The historic presence of a hazardous waste generator on the Subject Property, with no reported violations, is evidence of a *de minimis* condition.
37	ES-2	128 E. 116th Street	Site reconnaissance observation identified an approximately 275-gallon tote of unknown contents. The tote appeared discolored and displayed evidence of staining on its sides.

Vapor Encroachment Conditions (VECs)

A Vapor Encroachment Condition (VEC) is the presence or likely presence of one or more volatile chemicals of concern (COC) in the subsurface of the site caused by the release of vapors from contaminated soil or groundwater either on or near the Subject Property. As part of the Practice, the environmental professional is to evaluate the potential for the migration or encroachment of hazardous substances or petroleum products in the vapor phase within the subsurface. Within the scope of services requested by the Client, VECs were only evaluated for the locations of proposed buildings, stations, and electrical substations. While the method of the evaluation is not specified by the Practice, EDI completed the Vapor Encroachment Screening (VES) in general accordance with ASTM Standard E2600-15, Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions.

A total of 10 on-site VECs and five off-site VECs were identified in connection with the Subject Property. Table ES-6 lists the VECs that were identified in connection with the Subject Property.

Table ES-6: VECs

No.	Figure	Name	Description of VEC
103rd Street station and substation			
6	ES-1	B Van Dir Meer & Sons 400 W. 104th Street	This facility is on the Subject Property and identifies a history of three USTs, which may remain in the subsurface. The potential continued presence of these tanks on the Subject Property and possibility of releases from them represents a VEC.
7	ES-1	Fred Syhora 401 W. 105th Street	This facility is on the Subject Property and has records of installation and subsequent abandonment of four USTs in 1970. The reported abandonment of four USTs on the Subject Property prior and possibility of releases from them represents a VEC.
9	ES-1	Illinois Bell Telephone/ AT&T IL 413 W. 105th Street	This facility is on the Subject Property and has a record of a LUST incident. The LUST incident was remediated and issued an NFR letter in 2005, prior to the inclusion of the indoor inhalation route as a potential pathway in the IEPA’s cleanup regulations. The NFR letter notes contamination was allowed to remain in place subject to the restrictions of the NFR letter. The known contamination on the Subject Property represents a VEC.

No.	Figure	Name	Description of VEC
111th Street station and substation			
14	ES-2	William Ransom Transport 352 W. 110th Street	This facility is on the Subject Property and has a record of a gasoline LUST incident in 1999. IEPA records indicated the LUST incident is open and unresolved. The reported presence of an open unresolved LUST incident for a gasoline release at the facility represents a VEC.
18	ES-2	Pentecostal Temple, Roseland Service Station 415-419 W. 111th Street West of the Subject Property Approximately 350 feet from the Subject Property	The facility was listed in the LUST database for a used oil LUST incident on August 8, 1991, and a gasoline LUST incident on November 22, 1991. A review of IEPA records identified a letter from 2009, which essentially noted that the IEPA does not consider the LUST incidents resolved. The reported presence of an open unresolved LUST incidents at the facility represents a VEC.
Michigan Avenue Street station and 116th Street substation			
31	ES-2	Cuter Sefer Oil 11521 S. State Street	This facility is on the Subject Property and identified as in the 1950 Sanborn map as a gas station with three UST. City records note a UST was reportedly replaced in 1955. The reported presence of a 1,000-gallon UST at the facility, combined with a lack of records indicating the UST was removed, represents a VEC.
32	ES-2	Oak Park National Bank 11500 S. Michigan Avenue	This facility is on the Subject Property and is identified in City records with a history of nine USTs. Records identified that a 315-gallon UST, one 1,000-gallon UST, and one 2,000-gallon UST were reportedly installed in May of 1958. Records further identified that one 2,000-gallon UST and five 300-gallon USTs were reportedly installed in March of 1959. Aerial photographs from this time period depict the construction of a strip mall at this location. The reported historic presence of USTs being installed at

No.	Figure	Name	Description of VEC
			the facility, with no corresponding record of their removal, represents a VEC.
33	ES-2	Flair Cleaners, Betty Bright Cleaners 11518 S. Michigan Avenue	This facility is on the Subject Property and was identified as dry cleaning plant under several names from 1981 to 2003. This facility was also listed in City records relating to complaints and inspections. A complaint was filed in August 2004 that the facility was "dumping used chemical solution into the sewers throughout the area." Records also identified a series of eight inspections of the facility by City staff that were conducted between August 2002 and March 2007. Six of these inspections appeared to be regular periodic inspections of the facility and did not report issues of concern. Two of the inspections were noted to be conducted in response to the above noted complaint. These inspections were conducted on August 3, 2004 and August 12, 2004 and did not report to find evidence of the illegal disposal of materials in the sewer behind the shop. Based on the above information, the historical presence of a dry cleaning plant on the Subject Property represents a VEC.
36	ES-2	Clark Service Station/ Bobs Super 100/ Clark Oil and Refining 11555 S. Michigan Avenue Southwest of the Subject Property Approximately 70 feet from the Subject Property	The facility is on the Subject Property and was listed in the LUST database for a gasoline release in 1991. The LUST incident was remediated and issued an NFR letter in 2005. As the NFR letter was issued prior to the inclusion of the indoor inhalation route as a potential pathway in the IEPA's cleanup regulations, the LUST incident represents a VEC.

No.	Figure	Name	Description of VEC
120th Street yard and shop			
42	ES-3	All American Recycling/ Keywell Corp S.G/ Keywell Co./ Keywell Co. 11900 S. Cottage Grove Avenue	This facility is a scrap metal recycling entity. Historical aerial sources appear to depict this facility starting in the 1950s and observations during the site reconnaissance note its continued presence. However, it should be noted this facility appeared to extend past its present southwestern boundary and onto the Subject Property through the 1980s on what was most recently an asphalt plant operated by K-Five Construction. This facility was identified with a LUST incident in 1990. An NFR letter was subsequently reported in 1996. The facility was also listed in the SPILLS database for a non-LUST incident occurring on July 9, 2004. The facility was listed in the RCRA database as a Conditionally Exempt Small Quantity Generator in 1996 and Large Quantity Generator in 1992 of ignitable waste (D001) and corrosive waste (D002). Based on the facilities former status as a Large Quantity Generator of hazardous waste, the issuance of an NFR letter for the gasoline LUST incident prior to the inclusion of the indoor inhalation route as a potential pathway in the IEPA’s cleanup regulations, this facility represents a VEC.
44	ES-3	Elmer Larson, Inc. / K-Five Construction 12401 S. Cottage Grove Avenue	This facility is on the Subject Property. The reported use of this facility as an asphalt plant with records of at least seven ASTs of various sizes that contained diesel fuel, used oil, and other products, as well as the reported use or storage of various hazardous substances (fuel oil, oil black, asphalt cements, emulsion 212, fatty acids, tall oil, polymers with glycerol, maleic anhydride, phthalic anhydride, and soybean oil) in volumes sufficient to require Tier II reporting represents a VEC.

No.	Figure	Name	Description of VEC
45	ES-3	US Scrap/ U.S. Scrap/ U.S. Drum Disposal Co. 391 E. Kensington/ 123rd Street and Cottage Grove Avenue Southwest of the Subject Property Approximately 100 feet from the Subject Property	Based on the reported historical use of the facility, with landfilling and burial of chemical related wastes, and the reported presence of semi-volatile organic compounds (SVOC) and pesticide contamination remaining at the facility in the mid-2000s, this facility represents a VEC.
48	ES-3	Penn Central Corp./ Lake Calumet Quad 810 E. 124th Street	This facility is on the Subject Property. Given the reported historic use of the facility as a hazardous waste dump site and IEPA requested funding for a site investigation in 2004, this facility represents a VEC.
49	ES-3	Chicago MSD #3 (No address provided) Southwest and northeast of Subject Property Southwest Adjoining Property	The facility is believed to be part of the larger MWRD Calumet Water Reclamation Plant facility. This facility was identified in the *Hazardous Materials Technical Memorandum* (CWC Transit Group 2013). The *Hazardous Materials Technical Memorandum* identified this facility as an inactive landfill. Surface samples that were reportedly collected indicated the presence of PCBs, chloroform, chlordane, chromium, lead, toluene, and 4,4-dichlorodiphenyldichloroethane (DDD). Based on the reported presence of volatile chemicals in surface soil samples, this facility represents a VEC.
130th Street station and substation			
49	ES-3	Chicago Metro Sanitary District #2, Chicago Metro Sanitary District #3,	The facility is believed to be part of the larger MWRD Calumet Water Reclamation Plant facility. The facility was listed in a historical inventory of solid waste sites created originally in 1986. The Northeastern Illinois Planning Commission (NIPC) report recorded

No.	Figure	Name	Description of VEC
		Chicago Metro Sanitary District #4, (No address provided) Southwest and northeast of Subject Property Southwest Adjoining Property	locations of possible landfills using township, range, and section information, so exact placement was not always assured. Due to the reported historic landfill activity at the facility, this represents a VEC.

Format

As noted above, the Phase I ESA was completed generally following the Practice. The purpose of the Practice is to define good commercial and customary process for conducting a Phase I ESA. The Practice provides a recommended, but not required, format for reports within Appendix X4 of the Practice. To efficiently meet the goals of this investigation within the requested scope of services, the recommended report format was modified. To aid technical reviewers who are familiar with Phase I ESAs, Table ES-7 summarizes the recommended report format contained in the Practice with a corresponding listing to where the equivalent section(s) may be found in this document.

Table ES-7: Format Mapping

Appendices	Appendix A through Appendix G

Section 1 - Introduction

1.1 Project Overview

At the request of the Chicago Transit Authority (the Client), Environmental Design International inc. (EDI) performed a Phase I Environmental Site Assessment (ESA) of the Red Line Extension Preferred Alignment located 11 miles south of the Chicago Business District (commonly referred to as the Loop) in the City of Chicago, Illinois (the Subject Property). The Phase I ESA was completed generally following the American Society for Testing and Materials (ASTM) International Standard E1527-13, Standard Practice for Environmental Site Assessments (the Practice). Section 1.1.4 of the report presents the limiting conditions and exceptions from the practice. Based on the requested scope of services, the Phase I ESA does not meet the requirements for all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312. Refer to Figure 1-1 below for a map depicting the location of the Subject Property.

Figure 1-1: Subject Property Location

1.1.1 Subject Property Description and Use

According to the Draft Environmental Impact Statement (EIS) prepared by the Federal Transit Administration (FTA) and the Chicago Transit Authority (CTA) in cooperation with the Federal Highway Administration (FHWA) in October 2016, the RLE Project would extend the Red Line from the existing 95th Street Terminal to 132nd Street. The proposed 5.6-mile extension would include four new stations near 103rd Street, 111th Street, Michigan Avenue, and 130th Street. Each new station would include bus and parking facilities. The overall project area has residential (primarily single-family), commercial (urban mixed-use), industrial, transportation, utility, and vacant land uses affected by the Subject Property. The Subject Property area would begin within the I-57 right-of-way, north of the southbound lanes of I-57, and would follow the Union Pacific Railroad (UPRR) track southward.

Due to overall size and length of the Subject Property, portions of the report will break the Subject Property and adjoining properties into the following approximate segments to aid in the discussion and presentation of information:

- 95th Street station to 103rd Street station
- 103rd Street station to 111th Street station
- 111th Street station to Michigan Avenue station
- Michigan Avenue station to 130th Street station

1.1.2 Adjoining Property Description and Use

The boundaries of the project area are 95th Street on the north, Ashland Avenue on the west, Stony Island Avenue on the east, and the Calumet-Sag Channel/Little Calumet River and 132nd Street on the south. The I-57 Expressway and I-94 Bishop Ford Freeway cross the western and eastern edges of the project area, respectively. Lake Calumet is in the eastern portion of the project area. According to the Draft EIS, the surrounding land uses are primarily single-family residential properties north of I-57 and on the eastern side of the Preferred Alignment, with a mix of primarily single-family residential properties and industrial properties to the west. There are typically one or two vacant properties per block in the residential areas and large vacant parcels near Michigan Avenue, some of which are slated for development. South of 119th Street, the surrounding land uses abruptly transition to industrial, railroad, and major utility sites. The Altgeld Gardens public housing project is at the southern end of the Preferred Alignment. Table 1-1 summarizes use of the immediately adjoining properties.

Table 1-1: Adjoining Property Use

Direction	Adjoining Property Use
North	Primarily single- and multifamily residential, commercial, churches, schools, light industrial, and vacant lots
East	Primarily single- and multifamily residential, churches, schools, municipal, light industrial, and vacant lots
South	Primarily vacant lots and the Beaubien Woods.
West	Primarily single- and multifamily residential, light industrial, vacant lots, the Calumet Water Reclamation Plant, and the Altgeld Gardens public housing project

1.1.3 Historic Use of Subject Property and Adjoining Property

Since 1892, the start of the available historical record, the greater area surrounding the Subject Property has generally been developed. Early records depict the greater area with roads, rail lines, and some structures, indicating development and use of the area. As noted in the *Hazardous Materials Technical Memorandum* (CWC Transit Group 2013), rail lines have been present in or adjacent to the Subject Property since 1892. By the 1930s, the historical records depict the Subject Property, adjoining properties, and greater area as generally fully developed. Generally historical records from the 1930s to the present day depict the initial development of isolated areas or the redevelopment of isolated areas.

1.1.4 Limiting Conditions, Exceptions, and Data Gaps

The objective of the Practice is to gather the information required to satisfy the purpose of the assessment, rather than completion of specific tasks. Therefore, EDI considers limitations and exceptions from the Practice as data gaps. The Practice defines data gaps as a lack of, or inability to obtain, required information despite good faith efforts of the environmental professional. The Practice requires the environmental professional to comment on the impact of significant data gaps on their ability to identify RECs. In general, when required information was incomplete, not readily available, not provided, or not otherwise obtained, EDI attempted to use information from other sources to meet the Practices' performance objectives. When the data gaps affected the environmental professional's ability to identify RECs, EDI considered the data gap(s) to be significant.

To ensure an appropriate understanding of data gaps, all data gaps are identified below along with rationale for evaluation of their significance.

- No interviews were conducted, and no user questionnaire was submitted to the Client or completed within the scope of services requested by the Client. Within the context of the requested services, this is not a significant data gap based on the availability of previous investigations and documents provided by the Client.

- Based on the scope of services requested by the Client, the site reconnaissance was conducted from street level observations gathered from public rights-of-way within and immediately adjacent to the Subject Property. EDI was not provided with access to private property; or the interior spaces of buildings, structures, or improvements that were present on the Subject Property. Within the context of the requested scope of services, this is not a significant data gap.

- Based on the scope of services requested by the Client, EDI was not provided with land title records or the results of an environmental lien or activity and land use limitations (AULs) search. Within the context of the requested services, this is not a significant data gap.

- EDI was not able to document the historical use of the Subject Property back to first use for all areas. Readily available historic sources obtained by EDI began in 1892 and indicate development in the vicinity of the Subject Property. Given the historic developed setting of the Subject Property and that of the City of Chicago, this data failure is not considered a significant data gap.

- EDI was not able to document the historical use of the Subject Property at intervals of 5 years or less for all time periods. However, based on the available information, EDI could infer use of the Subject Property and surroundings during intervening years. Based on the available information, this is not considered a significant data gap.

- Based on the scope of services requested by the Client, VECs were only evaluated for the locations of proposed buildings, stations, and electrical substations, as these locations would be developed with enclosed ground level or below ground occupied structures. Based on EDI understanding, most of the planned development for the RLE would consist of elevated tracks on piers or tracks on ground level.

1.2 Reliance

This report was prepared for the Chicago Transit Authority (EDI's Client), who may rely on this report.

EDI's services were provided through a unique contractual relationship. This contractual relationship included an exchange of information about the Subject Property that was unique and serves as the basis upon which this report was prepared. Therefore, EDI's assessment may not be adequate for the intended purposes of another party. Reliance or use of this report by any party, except those identified above, was not foreseeable to EDI and is prohibited without express written permission from EDI. Any unauthorized reliance on or use of this report, including any information, findings, or conclusions, will be at sole risk of the third party without recourse to EDI.

Third party reliance letters may be issued by EDI upon request from the Client and receipt of payment of the specified fee for such letters. Each letter will be addressed to an individual party identified in writing by the Client. As EDI's services were provided through a unique contractual relationship, all third parties relying on EDI's reports, by such reliance, agree that such reliance is limited by our contract. No reliance is permitted by any party without such agreement.

Section 2 - Scope and Methodology

2.1 Purpose of Services

EDI completed this Phase I ESA generally following the Practice. The goal of the Practice is to identify RECs in connection with the Subject Property. The purpose of the Practice is to define good commercial and customary process for conducting a Phase I ESA.

2.2 Methodology and Scope of Work

EDI performed a Phase I ESA of the Subject Property. Our scope of work consisted of:

- Regulatory records review
- Historical records review, consisting of a review of:
    - Historical aerial photographs
    - Historical topographic maps
    - Historical Sanborn Fire Insurance maps
- Site reconnaissance
- Vapor Encroachment Screen (VES) in general accordance with ASTM Standard E2600-15
- Preparation of this report

Section 1.1.4 presented limiting conditions and exceptions to the Practice. Section 2.3 presented significant assumptions and limitations.

This report cites the information sources that EDI used as they are presented. As appropriate, copies or excerpts of these sources are appended.

2.3 Significant Assumptions and Limitations

The Phase I ESA was conducted in a manner consistent with that level of care and skill ordinarily exercised by members of the environmental profession under similar conditions. No other warranty or guarantee, express or implied, is included or intended in this report or otherwise. This Phase I ESA is based on our professional judgment concerning the significance of the data collected.

The observations and recommendations presented in this report are time dependent, and conditions will change. This report speaks only as of its date.

No Phase I ESA can wholly eliminate uncertainty regarding the potential for RECs in connection with a property. The Phase I ESA was intended to reduce but not eliminate uncertainty regarding the potential for RECs in connection with the Subject Property. This report is based on commonly known and reasonably ascertainable information, including limited ground-level visual inspection of the Subject Property (except where otherwise explicitly stated), in general conformance with the Practice. This report does not purport to encompass every report, record, or other form of documentation relevant to the Subject Property. Findings and conclusions derived from the methodologies described in the Practice contain all of the inherent limitations in the methodologies that are referred in the Practice. Furthermore, our services were not intended to be technically exhaustive. It is possible that even with the proper application of the methodologies described in the Practice, conditions may exist on the Subject Property that could not be identified within the scope of this assessment or that were not reasonably identifiable from the available information.

EDI has accepted as true, accurate, and unbiased the information provided by the Client, obtained from government sources, research firms, the public domain, interviews, and other sources. In addition, the Practice does not require EDI to independently verify information. Therefore, EDI assumes no liability for the accuracy or completeness of information provided by the Client, obtained from government sources, research firms, the public domain, interviews, and other sources.

EDI has also inferred the direction of the shallow groundwater movement at the Subject Property, and the immediate vicinity, based on the information obtained as part of this report and EDI's experience. Actual groundwater flow at the Subject Property may be locally influenced by many factors and can generally only be determined through a subsurface investigation, both of which are beyond the scope of this assessment.

EDI did not perform any drilling, exploratory probing or discovery, perform tests, collect samples, or take measurements.

Section 3 - User Provided Information

The ‘User’ is defined by the Practice as the party seeking to use the ASTM Standard E1527-13 to complete an environmental site assessment of the Subject Property. EDI considers our Client to be the User. As set forth in ASTM Standard E1527-13 and USEPA’s All Appropriate Inquiries Final Rule, the User has specific obligations for conducting specific inquiries and successfully completing this Practice.

3.1 Suggested Information

EDI’s Client provided the following suggested information described by the Practice:

- The reason for performing the Phase I ESA, which is to satisfy the requirements of the FTA through Standard Operating Procedure 19 to complete a corridor level Phase I ESA before the publication of the Final EIS.
- The complete and correct address for the Subject Property, including Parcel Index Numbers (PINs) which are listed in Table 5-2.
- Prior reports or documents concerning the Subject Property and its environmental condition which are listed and summarized in Section 3.3.
- The scope of services desired for the Phase I ESA and any assessment for business environmental risks that are outside the scope of an ASTM Standard E1527-13 Phase I ESA, which are presented in Section 2.
- Identification of all parties who will rely on this report and who are identified in Section 1.2.

3.2 Lien and AUL Results

The client did not provide EDI with land title records or the results of an environmental lien and AUL search. Section 1.1.4 evaluates this data gap.

3.3 Helpful Documents

In accordance with the Practice, EDI through the project team asked the Client, represented by Ms. Marlise Fratinardo, CTA Senior Project Manager, about helpful documents (such as prior Phase I ESAs or other environmental reports). Please note that, as presented in Section 1.1.4, no interviews were conducted, and no user questionnaire was submitted to the Client or completed within the scope of services requested by the Client.

Table 3-1 summarizes the document(s) provided to EDI, which are appended in Appendix F. If a document is not appended, it is available for review in EDI's office by appointment during normal business hours.

Table 3-1: Summary of Helpful Documents

Document Title:	**Hazardous Materials Technical Memorandum**
Prepared By:	CWC Transit Group
Prepared for:	CTA
Date:	August 21, 2013 (updated July 27, 2015)
The document is a *Hazardous Materials Technical Memorandum* for the RLE Project. According to the *Hazardous Materials Technical Memorandum*, the purpose of the report was to analyze the potential impacts of the RLE Project with respect to hazardous materials and to present the regulatory framework and evaluation methods used for the analysis. It should be noted this document was prepared while the CTA was evaluating several alternative alignments for the RLE Project. Therefore, EDI's review of this document was focused to what was identified as the UPRR Rail Alternative, as this alternative includes the Subject Property. The document notes that for all alternatives a general inspection field visit was performed, and that analysis included a review of historical topographic maps, aerials, and fire insurance maps; a regulatory database search; and a review of agency files for a select number of sites. Within the document, identified sites were then ranked as no concern, low concern, moderate concern, or high concern, based on their potential to have impacts related to hazardous materials. The findings of the document noted there would be the potential for permanent and construction hazardous material impacts as a result of the UPRR Rail Alternative. In addition, the 2014-2015 RLE Project Update appended in the document noted the CTA announced the NEPA Preferred Alternative – UPRR Alternative. Furthermore, according to the 2014-2015 RLE Project Update, the alignment would have no additional or different impacts from those previously described. The document identified 17 facilities as high concern for the UPRR Alternative. These facilities include:	

Document Title:	Hazardous Materials Technical Memorandum

- Shell Oil Co. at 4 E. 95th Street for a LUST incident and three USTs listed as in use
- Abbott Park Fieldhouse at 49 E. 95th Street for two open LUST incidents, removed USTs, and reported spills
- Illinois Bell Telephone at 413 W. 105th Street for a LUST incident and removed USTs
- William Ransom Transportation/Bus Garage at 352 W. 110th Street for an open LUST incident, removed UST, reported spills, and RCRA generator status
- Pentecostal Temple Church of God at 415 to 419 W. 111th Street for two open LUST incidents, reported spills, and RCRA generator status
- Triangle Transmission at 35 W. 115th Street for an open LUST incident, two USTs, reported spills, and RCRA generator status
- City of Chicago/Abandoned Service Station at 11500 S. Perry Avenue for a LUST incident and four USTs
- Cox, Donna at 2 W. 115th Street for two LUST incidents, two USTs, and reported spills
- Stuart Industrial Coatings, Inc. at 11740 S. Front Street for an open LUST incident
- Lake Calumet Smelting at 11901 S. Champlain Avenue for listing in the Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) database
- Bulkoa Inc./Schneider Tank Lines/Clean Harbors Env. Services at 11861 S. Cottage Grove Avenue for a LUST incident, seven USTs, and RCRA generator status
- Quala Services, LLC at 803 E 120th Street for RCRA generator status with noted violations and reported spills
- Metropolitan Water Reclamation District/Calumet Water Reclamation Plant at 400 E. 130th Street for three USTs and RCRA generator status
- Keywell, LLC at 11900 Cottage Grove Avenue for two LUST incidents, two USTs reported as removed, reported spills, and RCRA generator status

Document Title:	**Hazardous Materials Technical Memorandum**
- U.S. Scrap at 123rd Street and Cottage Grove Avenue for three USTs and RCRA generator status - Metro Sanitary District #3 at 125th Street and Doty Avenue for listing in the CERCLIS database - Penn Central Corp/Lake Calumet Quad at 810 E. 124th Street for listing in the State Site Unit and the CERCLIS database These facilities were evaluated as potential RECs for the Subject Property. These facilities were also identified in the EDR Area/Corridor Report that is discussed detail in Section 7.2.	

Document Title:	**Phase I Environmental Site Assessment (Phase I ESA)**
Prepared By:	Carnow, Conibear & Assoc., Ltd.
Prepared for:	Chicago Housing Authority (CHA)
Date:	July 22, 2014
The document is a Phase I ESA for a portion of the Subject Property at 130th Street station. The portions of the Subject Property at 130th Street station were identified as Altgeld Gardens - Blocks 11, 12, and 13. The Phase I ESA noted the site consisted of 26 vacant two-story brick buildings, an electrical building, parking lots, sidewalks, and landscape areas totaling approximately 17.3 acres. At the time of the former Phase I ESA, the buildings were unoccupied. The Phase I ESA identified the presence of four incinerators on the Subject Property as a REC. In addition, in 1996 and 2000, soil samples were collected from the Subject Property and analyzed for pesticides. One soil sample contained concentrations of pesticides that exceeded the 35 IAC 742, Tiered Approach to Corrective Action Objectives (TACO) soil remediation objectives (SROs). The Illinois Department of Public Health concluded that no apparent public health hazard existed from exposure to the pesticide residuals identified in surface soils; therefore, at the time, it was reportedly concluded the concentration of pesticides detected presented a *de minimis* condition. In 2009, additional soil samples were collected, and 24 samples contained polynuclear aromatic hydrocarbons (PNAs) and/or	

Document Title:	**Phase I Environmental Site Assessment (Phase I ESA)**
arsenic exceeding the SROs. According to the Phase I ESA, Carnow Conibear performed a 95 percent Upper Confidence Limit (UCL) evaluation of the data. The results of the analysis indicated that each 95 percent UCL concentration was below the corresponding applicable Tier 1 residential ingestion SRO for each respective analyte. Therefore, the concentrations of PNAs and arsenic detected were reportedly concluded to present a *de minimis* condition at the time.	

Document Title:	**Draft Environmental Impact Statement and Section 4(F) Evaluation**
Prepared By:	FTA and CTA (in cooperation with Federal Highway Administration)
Prepared for:	Chicago RLE
Date:	October 6, 2016
The document is a Draft Environmental Impact Statement and Section 4(F) Evaluation for the Subject Property. The Draft EIS details the RLE Project, which at the time the document was prepared, would extend the Red Line for 5.3 miles from the existing 95th Street Terminal to 130th Street. In addition, four new stations near 103rd Street, 111th Street, Michigan Avenue, and 130th Street would include bus and parking facilities. It should be noted that at the time the document was prepared, the 130th Street station was planned to be located north of 130th Street. The potential environmental impacts for the East and West Options discussed in the Draft EIS include displacements as a result of construction of the track structure and park & ride facilities and temporary construction impacts such as noise, vibration, fugitive dust, truck traffic, and roadway detours. The potential environmental benefits for the East and West Options discussed in the Draft EIS include economic revitalization and the development of more livable, transit-oriented communities near the proposed stations and increased foot traffic near stations, which would benefit local business. Regarding hazardous materials specifically, the Draft EIS discusses the potential for encountering hazardous materials in Section 4.8 of the document. The Draft EIS includes the August 21, 2013 (updated July 27, 2015) Hazardous Materials Technical Memorandum as Appendix R. The Draft EIS does not present additional information regarding the presence of potential hazardous materials on the Subject Property not captured by the Hazardous	

Materials Technical Memorandum. According to the Draft EIS, no permanent or construction-related adverse land use or economic impacts from hazardous materials would remain after mitigation efforts.

Document Title:	**Phase I Environmental Site Assessment (Phase I ESA)**
Prepared By:	Carnow, Conibear & Assoc., Ltd.
Prepared for:	CHA
Date:	March 3, 2017
The document is a Phase I ESA for a portion of the Subject Property at 130th Street station. The portions of the Subject Property at 130th Street station were identified as Altgeld Gardens - Blocks 11, 12, and 13. The Phase I ESA noted the site consisted of 26 vacant two-story brick buildings, an electrical building, parking lots, sidewalks, and landscape areas totaling approximately 17.3 acres. At the time of the former Phase I ESA, the buildings were unoccupied. The Phase I ESA identified the presence of five incinerators on the Subject Property as a REC. In addition, the previously identified *de minimis* conditions from the Phase I ESA conducted in July 2014 remained the same.	

Document Title:	**Phase II Environmental Site Assessment (Phase II ESA)**
Prepared By:	Carnow, Conibear & Assoc., Ltd.
Prepared for:	CHA
Date:	March 24, 2017
The document is a Phase II ESA for a portion of the Subject Property at 130th Street station. The portions of the Subject Property at 130th Street station were identified as Altgeld Gardens - Blocks 11, 12, and 13. The Phase II ESA was conducted to determine potential subsurface impacts at the Subject Property in relation to the former on-site incinerators identified as a REC in previous Phase I ESAs also prepared by Carnow Conibear & Assoc., Ltd.	

Document Title:	**Phase II Environmental Site Assessment (Phase II ESA)**
On February 27, 2017, Carnow Conibear supervised the advancement of 15 soil borings to a depth of 8 feet below ground surface near the former incinerators. Native groundwater was not encountered during the subsurface drilling. A total of five soil samples were analyzed for PNAs, RCRA metals, synthetic precipitation leaching procedure (SPLP) metals, and/or pH. Analytical results identified no PNAs above the applicable Tier 1 SROs. However, chromium and selenium were identified in exceedance of the applicable pH-Specific Tier 1 SROs for the soil component of Class I and II groundwater ingestion exposure routes. To further evaluate, SPLP analysis was performed with results below all applicable Tier 1 SROs for both Class I and Class II groundwater for chromium and selenium, which indicated the soil component of groundwater ingestion exposure route was not a concern. Based on the results of the soil sample investigation, Carnow Conibear noted no further investigation was warranted at the Subject Property in regard to the identified REC.	

Section 4 - Physical Setting

EDI reviewed physical source setting information to gather additional information about the Subject Property to assist with the interpolation of groundwater movement near the Subject Property and to assist with determining the potential for the migration of contaminants.

4.1 Summary of Physical Setting

Table 4-1: Summary of Physical Setting

Physical Feature	Note	Source
Subject Property Elevation	The Subject Property elevation ranges from 590 to 625 feet above mean sea level.	Draft Environmental Impact Statement and Section 4(F) Evaluation, and USGS Topographic Maps
Topographic Gradient	The Subject Property is generally flat with no discernible slope. The greater surrounding area slopes gently to the east towards Lake Michigan.	USGS Topographic Maps And Draft Environmental Impact Statement and Section 4(F) Evaluation
Closest Surface Water	Lake Calumet, which is located approximately 0.5 miles to the east-southeast at its closest location to the Subject Property.	USGS Topographic Maps, Google Earth
Flood plain mapped on Subject Property?	No, the Subject Property was mapped in an area identified as "Zone X," which is an area of minimal flood hazard.	FEMA Flood Maps: 17031C0635J, 17031C0645J, 17031C0655J, 17031C0661J, 17031C0662J, and 17031C0664J Copies of the FEMA maps are provided in Appendix F

Physical Feature	Note	Source
Primary Soil Type on Subject Property	Urban Land/Urban Land-Orthents (533/534A): Urban Land/Urban Land-Orthents are clayey soils that have been reworked, constructed on or otherwise disturbed. Orthents (802A): Orthents are loamy soils, well drained, and nearly level.	U.S. Department of Agriculture Natural Resources Conservation Service Custom Soil Resource Reports Copies of the Custom Soil Resource Reports are provided in Appendix F
Interpreted Shallow Groundwater Flow Direction	Groundwater generally flows towards the east. Actual groundwater flow at the Subject Property may be locally influenced by many factors and can generally only be determined through a subsurface investigation, which is beyond the scope of this assessment.	Information obtained from the Hazardous Materials Technical Memorandum, Source Water Assessment and Protection Program, and Topographic Maps from EDR

Section 5 - Site Reconnaissance

On June 8, June 9, and June 10, 2020, Britten Adams and Akilah Townsend from EDI conducted the site reconnaissance. The weather at the time of the site visit was sunny with an average temperature of 89° Fahrenheit. As noted in Section 1.1.4, the site reconnaissance was conducted from street level observations gathered from public rights-of-way within and immediately adjacent to the Subject Property. EDI was not provided with access to private property or the interior spaces of buildings, structures, or improvements that were present on the Subject Property. EDI's assessors were not escorted during the site reconnaissance. In general, EDI systematically observed the Subject Property. Appendix C includes the photographs from the site reconnaissance.

5.1 General Subject Property Setting

Table 5-1: Subject Property Setting

General Subject Property Information	
Subject Property Name	Red Line Extension Preferred Alignment in Chicago, Illinois
Subject Property Size	Approximately 5.6-mile corridor with the proposed permanent envelope being nominally 60 feet wide
Utilities	
Water Supply	City of Chicago
Wastewater or Sewer	City of Chicago
Electricity	Commonwealth Edison (ComEd)
Natural Gas	Nicor Gas

According to the Draft EIS prepared by the FTA and the CTA, in cooperation with the FHWA in October 2016, the RLE Project would extend the Red Line from the existing 95th Street Terminal to 130th Street. The proposed 5.6-mile extension would include four new stations near 103rd Street, 111th Street, Michigan Avenue, and 130th Street. Each new station would include bus and parking facilities.

Table 5-2 lists the 266 specific PINs and addresses for parcels which make up the Subject Property and that were provided to EDI.

Table 5-2: Subject Property PINs and Addresses

PIN	Address

According to the Draft EIS, the overall project area has residential (primarily single-family), commercial (urban mixed-use), industrial, transportation, utility, and vacant land uses affected by the Subject Property. The Subject Property area would begin within the I-57 right-of-way, north of the southbound lanes of I-57, and would follow the UPRR track southward. The surrounding land uses are primarily single-family residential properties north of I-57 and on the eastern side of the alignment, with a mix of primarily single-family residential properties and industrial properties to the west. There are typically one or two vacant properties per block in the residential areas and large vacant parcels near Michigan Avenue, some of which are slated for development. South of 119th Street, the surrounding land uses abruptly transition to industrial, railroad, and major utility sites. The Altgeld Gardens public housing project is at the southern end of the Preferred Alignment.

5.2 Observations of Subject Property

Table 5-3 provides a summary table of Subject Property observations. Any identified items are discussed following the table, along with an opinion about their significance. Observations of items that would fit across multiple categories are noted only once. For example, a hypothetical aboveground gasoline tank would be noted and discussed in relation to the above ground storage tank (AST) category. The hypothetical gasoline tank would then not be noted and discussed again in relation to the Use, Storage, or Disposal of Petroleum Products category.

Table 5-3: Subject Property Observations

Item Identified?	Item Description
	Equipment, Activity, or Uses
	Emergency Generator
	Elevator
	Hydraulic Lift
	Dry Cleaners or Laundromat
X	Automotive or Equipment Repair
	Grease Trap or Oil/Water Separator
	Wastewater Treatment System
	Septic or Sewage Tank
X	Transformers or Other Equipment that Could Contain PCBs

Item Identified?	Item Description
	Pipeline Markers
	Stormwater Ponds
	Quarries, Pits, Ponds, or Lagoons
	Use, Storage, or Disposal of Hazardous Substances
	Use, Storage, or Disposal of Petroleum Products
X	Aboveground Storage Tank (AST) or Underground Storage Tank (UST)
X	Drums or Other Bulk Chemical Container
	Suspect Containers or Containers with Unknown Contents
X	Drains or Sumps
	Wells - Drinking, Monitoring, or Irrigation
	Agrochemical Use/Application
X	Railroad Spur or Railroad Tracks
	Other Use or Condition of Concern
Potential Evidence of Release	
X	Interior or Pavement Stains or Corrosion
	Stained Soils or Stressed Vegetation
	Chemical Odors
	Surface Water Sheen or Discoloration
	Effluent Discharges or Unknown Pipes
X	Solid Waste Dumping or Landfilling or Suspect Fill Material
X	Construction Debris or Material Stockpiles

Automotive or Equipment Repair

Automotive and equipment repair was observed at 10514 S. Stewart Avenue, SRM Motors auto shop at 11424 and 11439 S. Perry Avenue, a vacant building at 400 W. 107th Street identified by signage as “Atlan Inc”, and Donald’s Auto Repair shop at 35 W. 115th Street. Automotive and equipment repair typically generate wastes in the form of waste oil and other waste fluids as well as handle and store some amount of petroleum products or hazardous materials such as fuels, oils, paints, solvents, and other grease and oils. From EDI’s observations from the available vantage points on public rights-of-way, the presence of automotive and equipment repair facilities are evidence of a REC in connection with the Subject Property.

What appeared to be an automotive junk yard was observed on the Subject Property at 11730 S. Front Avenue. Automotive junk yards typically generate wastes in the form of waste oil and other waste fluids as well as handle and store some amount of petroleum products or other grease and oils. From EDI's observations from the available vantage points on public rights-of-way, the presence of an automotive junk yard on the Subject Property is evidence of a REC.

Transformers or Other Equipment that Could Contain PCBs

Numerous pole-mounted electrical transformers were observed on the Subject Property throughout the length of the Subject Property. EDI believes the electrical equipment is the property and responsibility of ComEd, the local electrical utility company, who would be responsible for any cleanup related to the equipment that could not be attributed to tenant negligence. From the observations gathered within the limitations of the site reconnaissance, the identified electrical equipment appeared to be in good condition, with no apparent evidence of staining, leakage or corrosion noted. Based on their observed condition and the local utility ownership, the observed transformers are not considered to be evidence of a REC in connection with the Subject Property.

AST or UST

EDI did not observe evidence of USTs at the Subject Property from the observations gathered within the limitations of the site reconnaissance. However, EDI did observe several ASTs.

A vessel similar in appearance to an AST was observed at the vacant site southeast adjacent of the All American Recycling at 11900 S. Cottage Grove Avenue on the Subject Property. This location was identified as a former K-Five Construction asphalt plant in Section 7.2.1. The vessel appeared to be made of steel with double wall construction and was of an unknown capacity. The vessel appeared to be on its side, exhibited rust, and showed signs of deterioration. Evidence of significant staining indicative of a release could not be observed from the vantage points available to EDI at the time of the site reconnaissance. Given the vessels likely connection to the former asphalt plant, unknown purpose and poor condition, the vessel is considered evidence of a REC.

Two large upright ASTs were observed on the Subject Property at 11424 S. Perry Avenue. The ASTs were of an unknown capacity and the contents were not able to be determined from the vantage points available to EDI at the time of the site reconnaissance. Historical Sanborn maps depict the ASTs as part of a former facility identified as "South End Supply Co" in 1950 and 1989 maps. The Sanborn maps label the ASTs as "Concrete Sand and Stone Bins, 24' high." Based on the reported contents being sand and stone, these ASTs are not considered evidence of a REC.

Drums or Other Bulk Chemical Container

Within the Subject Property at 405 W. 108th Street, EDI observed two empty plastic 55-gallon drums on the ground. The drums appeared to have been fly dumped within a larger vacant grassy area on the property. The drums were located on an area of ground that appeared to have been disturbed and that was not supporting vegetative growth. Based on this information, the fly dumped drums are considered to be evidence of a *de minimis* condition in connection with the Subject Property.

Within the Subject Property at 352 W. 110th Street at Ransom Transportation, EDI observed two metal 55-gallon drums of unknown contents. The area in which the drums were stored were within a fenced area to which EDI was not provided access. From the available vantage point, the containers were observed to be in good condition with no evidence of leaks or staining. Based on this information, the drums themselves are not considered to be evidence of a REC in connection with the Subject Property.

EDI observed an approximately 275-gallon tote of unknown contents on the Subject Property at 128 E. 116th Street, a vacant parcel. The tote appeared discolored and displayed evidence of staining on its sides. Given the unknown contents, discoloration, and staining, the tote is considered evidence of a *de minimis* condition.

EDI observed three approximately 275-gallon totes on the Subject Property at the above noted automotive junk yard at 11736 S. Front Avenue. The totes appeared to be stored on the junkyard site. The area in which the totes were stored were within a fenced area that EDI was not provided access to at the time of the site reconnaissance. From the available vantage points, the containers appeared to be empty. However, the condition of the totes and the ground surface around them could not be determined. The presence of the totes on an automotive junk yard is evidence of a REC in connection with the Subject Property.

What appears to be a concrete secondary containment structure was observed at the vacant site southeast adjacent of the All American Recycling at 11900 S. Cottage Grove Avenue on the Subject Property. This location was identified as a former K-Five Construction asphalt plant in Section 7.2.1. The containment structure was observed to contain several saddles that may at one time have supported several large vessels or ASTs of unknown size. The containment structure also was observed to have several piping penetrations, with stubbed piping sticking out through the floor of the structure. At the time of the site reconnaissance, the containment structure was observed to contain what is believed to be standing rainwater. The ground surface in the area of the structure was primarily gravel, concrete, and asphalt, and exhibited some signs of staining as observed by EDI during the site reconnaissance. Based on EDI's observations, the concrete secondary containment structure is evidence of a REC in connection with the Subject Property.

Drains or Sumps

Stormwater catch basins were observed in the streets and associated areas of the Subject Property. Within the limitations of the site reconnaissance, EDI did not observe evidence of unusual discoloration, staining, or improper disposal in connection with the catch basins. The catch basins are believed to flow into the local storm sewer system. Based on this information, the catch basins are not considered evidence of a REC.

Railroad Spur or Railroad Tracks

Railroad tracks were observed on and adjacent to the Subject Property. This includes the UPRR railroad tracks which run parallel to most of the Subject Property and intersect the Subject Property at several locations; the Canadian National Railway (CN) and Metra tracks which cross the Subject Property near S. Front Street and E. 118th Street; the Norfolk Southern (NS) tracks and rail yard located on the Subject Property from approximately east of the CN and Metra tracks and extend southwesterly past 130th Street. These tracks exist at various locations on elevated embankments. The source of the fill material used to make the embankments is unknown and is evidence of a REC. Most of these rail lines are also used to transport freight, which may include hazardous materials or petroleum products. Spills or releases that occurred on or along these tracks may have impacted the Subject Property and is evidence of a potential REC. Furthermore, releases may have occurred from creosote treated railroad ties or coal ash releases from steam train operations.

EDI observed a railroad spurs entering All American Recycling at 11900 S. Cottage Grove Avenue on the Subject Property. The tracks were observed to be in use and are apparently used for shipments of materials to and from the site. EDI did not observe noticeable evidence of oil and grease staining of the railroad ballast along the spur from the publicly accessible vantage points available at the time of the site reconnaissance. Based on the use of the facility to process and sort metals, the presence of railroad spurs is evidence of a REC.

Railroad rights of way are typically maintained using herbicides for weed control. Application of herbicides, provided that the herbicides are applied in accordance with manufacturer's directions and are not spilled or released as a point source, are exempt from CERCLA enforcement. However, the likely use of herbicides on the Subject Property is evidence of a potential REC. The Client should be aware that routine application of herbicides over time may result in elevated concentrations of chemicals in the surface soil and/or surface run-off.

Interior or Pavement Stains or Corrosion

EDI was not provided with access to private property; or the interior spaces of buildings, structures, or improvements that were present on the Subject Property. Therefore, EDI was unable to access interiors for the presence of stains or corrosion. However, EDI did observe areas of minor staining on the paved parking and drive areas located on the Subject Property. The stains appear to be the result of leakage of automobile related fluids and not the result of a large-scale spills. EDI considers the presence of the staining a *de minimis* condition and, by definition, not a REC in connection with the subject property.

Solid Waste Dumping or Landfilling or Suspect Fill Material

Within the limitations of the site reconnaissance, EDI did not observe landfilling or suspect fill material at the Subject Property. However, EDI did observe evidence of apparent "fly dumping" of solid waste materials at the Subject Property. At 348 W. 110th Place and 405 W. 108th Street, EDI observed several piles of apparent solid waste that may have been "fly dumped" at the Subject Property. The origin of the material comprising the piles was not readily apparent, but EDI observed cardboard and miscellaneous household items within the piles. Due to the unknown origin and contents of the apparent solid waste, the presence of the piles is evidence of a *de minimis* condition in connection with the Subject Property.

EDI also observed several small stockpiles of earthen material along the NS railroad tracks near All American Recycling at 11900 S. Cottage Grove Avenue. It was readily apparent the earthen material had been recently created by grading activities being conducted adjacent to the track as part of rail maintenance activities. Due to the material evidently originating from the Subject Property, and remaining at the Subject Property, these stockpiles are not considered evidence of a REC in connection with the Subject Property.

Construction Debris or Material Stockpiles

Within the limitations of the site reconnaissance, EDI observed stockpiles of what appeared to be metal materials at the All American Recycling facility at 11900 S. Cottage Grove Avenue on the Subject Property. Based on the observed use of the facility as a scrap metal recycling entity, the presence of the stockpiles is considered contributing evidence of a REC.

EDI also observed evidence of stockpiled broken concrete, asphalt, and gravel at the vacant site southeast adjacent of All American Recycling at 11900 S Cottage Grove Avenue on the Subject Property. This location was identified as a former K-Five Construction asphalt plant in Section 7.2.1. Based on the reported historical use of this site, the stockpiles are considered contributing evidence of a REC.

5.3 Observations of Adjoining Properties

A summary table of observations of adjoining properties is provided below. EDI's observations were gathered from the available vantage points on the Subject Property and public rights-of-way adjoining Subject Property. Any identified items are discussed following the table, along with an opinion about their significance.

Table 5-4: Adjoining Property Observations

Item Identified?	Item Description
Equipment, Activity, or Uses	
	Emergency Generator
	Elevator
	Hydraulic Lift
	Dry Cleaners or Laundromat
X	Automotive or Equipment Repair
	Grease Trap or Oil/Water Separator
X	Wastewater Treatment System
	Septic or Sewage Tank
X	Transformers or other equipment that could contain PCBs
	Pipeline Markers
	Stormwater Ponds
	Quarries, Pits, Ponds, or Lagoons
	Use, Storage, or Disposal of Hazardous Substances
	Use, Storage, or Disposal of Petroleum Products
X	AST or UST
	Drums or Other Bulk Chemical Container
	Suspect Containers or Containers with Unknown Contents
X	Drains or Sumps
	Wells - Drinking, Monitoring, or Irrigation
	Agrochemical Use/Application
X	Railroad Spur or Railroad Tracks
	Other Use or Condition of Concern
Potential Evidence of Release	
X	Exterior or Pavement Stains or Corrosion
	Stained Soils or Stressed Vegetation
	Chemical Odors
	Surface Water Sheen or Discoloration
	Effluent Discharges or Unknown Pipes

Item Identified?	Item Description
	Solid Waste Dumping or Landfilling or Suspect Fill Material
	Construction Debris or Material Stockpiles

Automotive or Equipment Repair

Automotive and equipment repair was observed at Street Southside Auto Services at 401 W. 111th Street, approximately 150 feet west of the Subject Property. Automotive and equipment repair typically generate wastes in the form of waste oil and other waste fluids as well as handle and store some amount of petroleum products or hazardous materials such as fuels, oils, paints, solvents, and other grease and oils. From EDI's observations from the available vantage points on public rights-of-way, the presence of an automotive and equipment repair facility is evidence of a REC in connection with the Subject Property.

Wastewater Treatment System

EDI observed what was identified as the Metropolitan Water Reclamation District of Greater Chicago (MWRD), Calumet Reclamation Plant adjacent to the Subject Property and north of 130th Street. According to the MWRD's website, this facility is a wastewater treatment plant that services the southern portion of Cook County, which includes residential, commercial, and industrial areas. This facility reportedly conducts primary, secondary, and tertiary water treatment operations, and treats 354 million gallons of wastewater on average per day. The facility also reportedly generates approximately 100 tons of dried solids every day, which are managed onsite and processed into bio-solids. Numerous clarifiers, settling basins, and related structures were observed by EDI. Given the reported volume of wastewater treated at the facility and solids managed, the sources of wastewater entering the facility including commercial and industrial operations, the presence of a wastewater treatment facility adjacent to the property is evidence of a REC.

Transformers or other equipment that could contain PCBs

Numerous pole-mounted electrical transformers were observed throughout the areas adjoining the Subject Property. EDI believes the electrical equipment is the property and responsibility of ComEd, the local electrical utility company, who would be responsible for any cleanup related to the equipment that could not be attributed to tenant negligence. From the observations gathered within the limitations of the site reconnaissance, the identified electrical equipment appeared to be in good condition, with no apparent evidence of staining, leakage or corrosion noted. Based on the observed condition and the local utility ownership, the observed transformers are not considered to be evidence of a REC in connection with the Subject Property.

AST or UST

EDI observed a Citgo gas station approximately 200 feet to the southwest of the Subject Property at the intersection of E. 116th Street and S. Michigan Avenue. From the publicly available vantage points, EDI observed evidence of three USTs at this facility, which would appear to be used to dispense various grades of gasoline. The presence of a gas station with USTs is evidence of a REC in connection with the Subject Property.

Drains or Sumps

Numerous stormwater catch basins were observed in the streets and roadways adjoining the Subject Property. Within the limitations of the site reconnaissance, EDI did not observe evidence of unusual discoloration, staining, or improper disposal in connection with the catch basins. The catch basins are believed to flow into the local storm sewer system. Based on this information the catch basins are not considered evidence of a REC.

Railroad Spur or Railroad Tracks

Railroad tracks were observed on and adjacent to the Subject Property. This includes the UPRR railroad tracks which run parallel to most of the Subject Property and intersect the Subject Property at several locations, and the CN and Metra tracks which cross the Subject Property near S. Front Street and E. 118th Street. These tracks exist at various locations on elevated embankments. The source of the fill material used to make the embankments is unknown and is evidence of a REC. Most of these rail lines are also used to transport freight, which may include hazardous materials or petroleum products. Spills or releases that occurred on or along these tracks may have impacted the Subject Property and is evidence of a potential REC. Furthermore, releases may have occurred from creosote treated railroad ties or coal ash releases from steam train operations.

Railroad rights of way are typically maintained using herbicides for weed control. Application of herbicides, provided that the herbicides are applied in accordance with manufacturer's directions and are not spilled or released as a point source, are exempt from CERCLA enforcement. Therefore, the use of herbicides on the adjoining property is not considered evidence of a REC. However, the Client should be aware that routine application of herbicides over time may result in elevated concentrations of chemicals in the surface soil and/or surface run-off.

Exterior or Pavement Stains or Corrosion

Numerous areas of minor stains on paved surfaces were observed in the streets and roadways adjoining the Subject Property. The observed stains appear to be the result of leakage of automobile related fluids and not the result of a large-scale spills. EDI considers the presence of the staining a *de minimis* condition and, by definition, not evidence of a REC in connection with the Subject Property.

Section 6 - Historic Information

EDI investigated the history of the Subject Property and surrounding area in order to help identify the likelihood of past uses having led to RECs in connection with the Subject Property. In investigating the history of the Subject Property and surrounding area, EDI utilized readily available historical records obtained from a third-party data provider, as well as information obtained from any interviews. The historical records utilized by EDI are appended, when practical. If a historical record is not appended, it is available for review in EDI's office by appointment during normal business hours.

6.1 Prior Investigations

The Client provided EDI with the reports or documents presented in Section 3.3.

6.2 Summary of Records

In investigating the history of the Subject Property, EDI reviewed the following resources obtained from EDR. A copy of the EDR Historical Topo Map Report, the EDR Aerial Photo Decade Package, and the EDR Certified Sanborn® Map Report are provided in Appendix E.

Table 6-1: Summary of Records

Resource Type	Years Reviewed	Sources
USGS Topographic (topo) Maps	1892, 1893, 1900, 1901, 1929, 1948, 1953, 1956, 1960, 1963, 1965, 1973, 1977, 1978, 1991, 1993, 1997, and 2012	USGS as compiled by EDR
Aerial Photographs	1938, 1952, 1959, 1964, 1973, 1978, 1983, 1984, 1988, 1998, 1999, 2007, 2011, 2014, and 2017	Various sources as compiled by EDR
Sanborn Fire Insurance Maps	1897, 1911, 1938, 1950, 1989, and 2004	Sanborn Library as complied by EDR

6.3 Historical Summary of Subject and Adjoining Properties

A summary of the interpreted history of the Subject Property and adjacent properties is presented below.

Table 6-2: Historical Summary

Date(s)	Source(s)	Interpreted History
Subject Property – 95th Street station to 103rd Street station		
1892 - 1953	Historic Topos Historic Aerials Historic Sanborns	Historic topographic maps and historic aerial photographs depict the Subject Property as mostly vacant land, with roadways and unspecified structures. Historic Sanborn Fire Insurance Maps (Sanborns) depict the Subject Property with vacant land and parks, as well as several sheds/warehouses, a chicken house, feed warehouse, fuel warehouse, a portion of a coal yard, wagon storage/fuel storage, and a railroad spur.
1956 - 1960	Historic Topos Historic Aerials	By 1956, historic topo maps and historic aerials depict the Subject Property as a portion of the construction of the I-57, vacant land, and residential and commercial structures.
1963 - 2017	Historic Topos Historic Aerials Historic Sanborns	From 1963 to 2012, the historic topo maps, historic aerials, and historic Sanborn maps depict the Subject Property as a portion of the I-94 and I-57, vacant land/parks, a junkyard, contractor's yard, and commercial structures and warehouses.
North Adjacent – 95th Street station to 103rd Street station		
1892 - 1953	Historic Topos Historic Aerials Historic Sanborns	Historic topographic maps and historic aerial photographs depict the north adjacent properties as mostly vacant land, railroad tracks, and unspecified structures. Historic Sanborn maps depict the north adjacent properties with residential dwellings, sheds, and a private garage.
1956 - 1960	Historic Topos Historic Aerials	By 1956, historic topo maps and historic aerials depict the north adjacent properties as developed with commercial or residential structures, railroad tracks, and as a portion of the construction of the I-94 and I-57.

Date(s)	Source(s)	Interpreted History
1963 - 2017	Historic Topos Historic Aerials Historic Sanborns	By 1963, historic topo maps and historic aerials depict the north adjacent properties as developed with commercial or residential structures, railroad tracks, and as a portion of the I-94 and I-57. Historic Sanborn maps depict the north adjacent properties with residential buildings and park areas.
South Adjacent – 95th Street station to 103rd Street station		
1892 - 1953	Historic Topos Historic Aerials Historic Sanborns	Historic topographic maps and historic aerial photographs depict the south adjacent properties as mostly vacant land and railroad tracks. Historic Sanborn maps depict the south adjacent properties with residential dwellings and roadways.
1956 - 1960	Historic Topos Historic Aerials	By 1956, historic topographic maps depict the south adjacent properties as a portion of the construction of the I-94 and I-57 and with commercial or residential structures.
1963 - 2017	Historic Topos Historic Aerials Historic Sanborns	From 1963 to 2012, the historic topographic maps depict the south adjacent properties as a portion of the I-94 and I-57 and with commercial or residential structures. Historic Sanborn maps depict the south adjacent properties with a CTA repair shop, the I-94 and I-57, dwellings, and vacant/parking lots.
East Adjacent – 95th Street station to 103rd Street station		
1892 - 1953	Historic Topos Historic Aerials Historic Sanborns	Historic topographic maps depict the east adjacent properties as vacant land, roadways, a park, and unspecified structures. Historic Sanborn maps depict the east adjacent properties with roadways, a park, and railroad tracks.
1956 - 1960	Historic Topos Historic Aerials	By 1956, historic topographic maps depict the east adjacent properties with commercial or residential structures, Abbott Park and Harlan High School, and with the I-94 and I-57 under construction.

Date(s)	Source(s)	Interpreted History
1963 - 2017	Historic Topos Historic Aerials Historic Sanborns	From 1963 to 2012, historic topographic maps and aerial photographs depict the east adjacent properties with commercial or residential structures, Abbott Park and Harlan High School, Wendell Smith Park, Block Park, and the I-94 and I-57. Historic Sanborn maps depict the east adjacent properties with Abbott Park, John Marshall Harlan High School, the I-94 and I-57, railroad tracks, and roadways.
West Adjacent – 95th Street station to 103rd Street station		
1892 - 1953	Historic Topos Historic Aerials Historic Sanborns	Historic topographic maps depict the west adjacent properties as vacant land, roadways, and residential or commercial structures. Historic Sanborn maps depict the west adjacent properties with residential dwellings, a shed, a 4-car private garage, and a church.
1956 - 1960	Historic Topos Historic Aerials	By 1956, historic topographic maps depict the west adjacent properties with commercial or residential structures and with the I-94 and I-57 under construction.
1963 - 2017	Historic Topos Historic Aerials Historic Sanborns	From 1963 to 2012, the historic topographic maps depict the west adjacent properties as a portion of the I-94 and I-57 and with commercial or residential structures. Historic Sanborn maps depict the west adjacent properties with the I-94 and I-57, residential dwellings, and a church for the years 1989 and 2004.
Subject Property – 103rd Street station to 111th Street station		
1892 - 1901	Historic Topos Historic Sanborns	Historic topographic maps depict the Subject Property as mostly vacant land, with the only developments being roadways and unspecified structures. Historic Sanborn maps depict the Subject Property with portions of vacant land, a dwelling, lumber shed, coal shed, and a wood and pipe yard.

Date(s)	Source(s)	Interpreted History
1911	Historic Sanborns	Historic Sanborn maps depict the Subject Property with portions of vacant land, a contractor’s yard, cement block factory, dwellings, shed, coal shed, and the Farr Brother’s Co. (hay, grain, sewer, and concrete building supplies).
1929 - 1938	Historic Topos Historic Aerials	By 1929, historic topographic maps depict the Subject Property as developed with unspecified structures. By 1938, historic aerial photographs depict the Subject Property with areas of vacant land and developed with commercial and residential structures.
1950	Historic Sanborns	Historic Sanborn maps depict the Subject Property with portions of vacant land, contractor storage yards, a cement block factory, a coal yard, dwellings, contractor’s warehouse, machinery storage building with a gasoline tank, miscellaneous storage, an office, garage, Chatham Coal & Coke Co. (coal yard), and Rittenhouse & Embree Co. Roseland yard.
1952 - 2017	Historic Topos Historic Aerials Historic Sanborns	Historic topographic maps and aerial photographs depict the Subject Property with areas of vacant land and developed with commercial and residential structures. Historic Sanborn maps depict the Subject Property with portions of vacant land, parking lots, contractor’s yards with a fuel oil tank, warehouses, a utility building (Illinois Bell Telephone Co. and later Ameritech), a manufacturing facility with tanks and a slag bin, machinery storage, and commercial buildings.
North Adjacent - 103rd Street station to 111th Street station		
1892 - 1973	Historic Topos Historic Aerials Historic Sanborns	Historic topographic maps and historic aerial photographs depict the north adjacent properties with railroad tracks and commercial and residential structures. Sanborn maps depict the north adjacent properties with railroad tracks, vacant lots, and dwellings.

Date(s)	Source(s)	Interpreted History
1978 - 2017	Historic Topos Historic Aerials Historic Sanborns	Historic topographic maps and historic aerial photographs depict the north adjacent properties with railroad tracks, commercial and residential structures and a suspect junk yard. Historic Sanborn maps depict the north adjacent properties with railroad tracks, vacant lots, dwellings, a junk yard, and a manufacturing facility for the years 1989 and 2004.
South Adjacent – 103rd Street station to 111th Street station		
1892 - 1950	Historic Topos Historic Aerials Historic Sanborns	Historic topographic maps and historic aerial photographs depict the south adjacent properties with railroad tracks, roadways, and commercial and residential structures. Historic Sanborn maps depict the south adjacent properties with railroad tracks, roadways, and residential dwellings.
1952 - 2017	Historic Topos Historic Aerials Historic Sanborns	Historic topographic maps and historic aerial photographs depict the south adjacent properties with railroad tracks, roadways, and commercial and residential structures. The historic Sanborn maps depict the south adjacent properties with roadways, residential dwellings, a stone-cutting shop, and railroad tracks.
East Adjacent – 103rd Street station to 111th Street station		
1892 - 1911	Historic Topos Historic Sanborns	Historic topographic maps depict the east adjacent properties with vacant land, roadways, and railroad tracks. Historic Sanborn maps depict the east adjacent properties with railroad tracks, vacant lots, dwellings, a blacksmith shop, tool shed, G.J. Vendenburg (door and blind factory), and a coal shed.

Date(s)	Source(s)	Interpreted History
1929 - 1950	Historic Topos Historic Aerials Historic Sanborns	By 1900, historic topographic maps depict the east adjacent properties with unspecified structures and railroad tracks. By 1938, historic aerial photographs depict the east adjacent properties with commercial and residential structures and railroad tracks. The historic Sanborn maps depict the east adjacent properties with various warehouses, dwellings, a coal yard, and railroad tracks for the years 1938 and 1950.
1952 - 2017	Historic Topos Historic Aerials Historic Sanborns	Historic topographic maps and historic aerial photographs depict the east adjacent properties with commercial and residential structures and railroad tracks. Historic Sanborn maps depict the east adjacent properties with a contractor's storage facility, railroad tracks, commercial buildings, a playground, residential dwellings, and a community center for the years 1989 and 2004.
West Adjacent – 103rd Street station to 111th Street station		
1892 - 1911	Historic Topos Historic Sanborns	Historic topographic maps depict the west adjacent properties with vacant land, roadways, and railroad tracks. Historic Sanborn maps depict the west adjacent properties with railroad tracks, a coal shed, and The Farr Bro's Co.
1929 - 1950	Historic Topos Historic Aerials Historic Sanborns	By 1929, historic topographic maps depict the west adjacent properties as developed with unspecified structures and railroad tracks. By 1938, historic aerial photographs depict the east adjacent properties with commercial and residential structures and railroad tracks. Historic Sanborn maps depict the west adjacent properties with warehouses, a warehouse and repair shop, contractor's yard, vacant lots, miscellaneous storage with a gasoline tank, storage and auto garage with a gasoline tank, coal yards, a planing mill, roadways, and an auto garage for the years 1938 and 1950.

Date(s)	Source(s)	Interpreted History
1952 - 2017	Historic Topos Historic Aerials Historic Sanborns	Historic topographic maps and historic aerial photographs depict the west adjacent properties with various commercial and residential structures and railroad tracks. Historic Sanborn maps depict the west adjacent properties with warehouses, parking lots, a contractor's yard, church, roadways, contractor's storage building with two (2) gasoline tanks, railroad tracks, and vacant lots for the years 1989 and 2004.
Subject Property - 111th Street station to Michigan Avenue station		
1892 - 1911	Historic Topos Historic Sanborns	Historic topographic maps depict the Subject Property as mostly vacant land, with the only developments being early roadways and unspecified structures. Historic Sanborn maps depict the Subject Property as portions of vacant land, Roseland Station, Sheldon Park Station, South End Supply Co. (coal shed), Joseph Schlitz Brewing Beer Depot, printing shop, Wacker & Birk Brewing Co. Roseland Branch Beer Depot, parochial school, St. Stephen's School, Chicago & Riverdale Lumber Co. (coal sheds), Armor & Co. (office and storage), grain and building materials, auto repair shop, an oil and tool supply house, manufacturing, warehouses, dwellings, storefronts, Rapp Bro's north yard, wood yard, and coal yards.
1929 - 1938	Historic Topos Historic Aerials	By 1929, historic topographic maps depict the Subject Property as developed with unspecified structures. By 1938, historic aerial photographs depict the Subject Property with several commercial and residential structures.

Date(s)	Source(s)	Interpreted History
1950	Historic Sanborns	Historic Sanborn maps depict the Subject Property as developed with portions of vacant lots, dwellings, storefronts, contractor's warehouse, Sheldon Park passenger station, a building material warehouse, coal yard, beer storage, multiple filling stations with gasoline tanks, auto repair shops, junk yards, Chicago & Riverdale Lumber Co., a coffee roaster, sheet metal warehouse, automobile garage with gasoline tank, trailer factory with lacquer spraying, and Kensington passenger station.
1952 - 2012	Historic Topos Historic Aerials Historic Sanborns	Historic topographic maps and aerial photographs depict the Subject Property as developed with several commercial and residential structures. Historic Sanborn maps depict the Subject Property as developed with portions of vacant lots and parking lots, dwellings, auto repair shop, warehouse, several manufacturing facilities, commercial storefronts, junk yard, filling station, and a trailer factory with lacquer spraying.
2014 - 2017	Historic Aerials	Historic aerial photographs depict the former commercial or residential structures in the location of the proposed Michigan Avenue station as mostly vacant land, with the former structures razed.
North Adjacent - 111th Street station to Michigan Avenue station		
1892 - 1911	Historic Topos Historic Sanborns	Historic topographic maps depict the north adjacent properties with unspecified structures and roadways. Historic Sanborn maps depict the north adjacent properties with a hay shed, South End Supply Co., Joseph Schlitz Brewing Co. Beer Depot, various storefronts, dwellings, Curtis Public School, vacant lots, a paint shop, and a blacksmith.

Date(s)	Source(s)	Interpreted History
1929 - 1950	Historic Topos Historic Aerials Historic Sanborns	By 1929, historic topo maps depict the north adjacent properties with various unspecified structures and roadways. By 1938, historic aerial photographs depict the north adjacent properties with several commercial and residential structures. Historic Sanborn maps depict the north adjacent properties with dwellings, commercial storefronts, a warehouse, residential flats (apartments), Venetian Hall, and George William Curtis Public School for the year 1950.
1952 - 2017	Historic Topos Historic Aerials Historic Sanborns	Historic topo maps and aerial photographs depict the north adjacent properties with several commercial and residential structures. The historic Sanborns maps depict the north adjacent properties with various residential dwellings and flats, auto repair, warehouses, manufacturing, George William Curtis Public School, parking lots, commercial structures, and a church for the years 1989 and 2004.
South Adjacent – 111th Street station to Michigan Avenue station		
1892 - 1893	Historic Topos	Historic topographic maps depict the south adjacent properties as mostly vacant land, with the only developments being early roadways and railroad tracks.
1897 - 1950	Historic Topos Historic Aerials Historic Sanborns	By 1900, historic topo maps depict the south adjacent properties with unspecified structures and railroad tracks. By 1938, historic topo maps and historic aerials depict the south adjacent properties with vacant land, several commercial and residential structures, and railroad tracks. Historic Sanborn maps depict the south adjacent properties with mostly vacant lots, railroad tracks, dwellings and storefronts, and coal sheds for the year 1950.

Date(s)	Source(s)	Interpreted History
1952 - 2017	Historic Topos Historic Aerials Historic Sanborns	Historic topo maps and historic aerials depict the south adjacent properties with vacant land, several commercial and residential structures, and railroad tracks. Historic Sanborn maps depict the south adjacent properties with vacant lots, railroad tracks, dwellings and a gasoline filling station for the years 1989 and 2004.
East Adjacent - 111th Street station to Michigan Avenue station		
1892 - 1911	Historic Topos Historic Sanborns	Historic topographic maps depict the east adjacent properties as mostly vacant land, with the only developments being early roadways and unspecified structures. Historic Sanborn maps depict the east adjacent properties with a dwelling, manufacturing, vacant lots, and storefronts.
1929 - 1950	Historic Topos Historic Aerials Historic Sanborns	By 1929, historic topographic maps depict the east adjacent properties with unspecified structures. By 1938, historic topo maps and historic aerials depict the east adjacent properties with several commercial and residential structures. Historic Sanborn maps depict the east adjacent properties with a beer warehouse, beer storage, residential and commercial structures for the year 1950.
1952 - 2017	Historic Topos Historic Aerials Historic Sanborns	Historic topo maps and historic aerials depict the east adjacent properties with several commercial and residential structures. Historic Sanborn maps depict the east adjacent properties with vacant lots, residential dwellings and flats (apartments), and commercial structures for the years 1989 and 2004.
West Adjacent - 111th Street station to Michigan Avenue station		
1892 - 1929	Historic Topos Historic Sanborns	Historic topographic maps depict the west adjacent properties with vacant land, railroad tracks, and unspecified structures. Historic Sanborn maps depict the west adjacent properties with a coal yard, vacant lots, dwellings, and railroad tracks.

Date(s)	Source(s)	Interpreted History
1938 - 1950	Historic Topos Historic Aerials Historic Sanborns	By 1938, historic topo maps and historic aerials depict the west adjacent properties with several commercial and residential structures and railroad tracks. Historic Sanborn maps depict the west adjacent properties with railroad tracks, a coal yard, a machine shop, gasoline filling station, and dwellings.
1952 - 2017	Historic Topos Historic Aerials Historic Sanborns	Historic topo maps and historic aerials depict the west adjacent properties with several commercial and residential structures and railroad tracks. Historic Sanborn maps depict the west adjacent properties with railroad tracks, dwellings, a manufacturing shop, and a contractor's yard for the years 1989 and 2004.
Subject Property – Michigan Avenue station to 130th Street station		
1892 - 1901	Historic Topos	Historic topographic maps depict the Subject Property as mostly vacant land, with the only developments being early roadways and unspecified structures.
1929 - 1938	Historic Topos Historic Aerials	By 1929, historic topographic maps depict the Subject Property as developed with unspecified structures, roadways, a portion of a railyard, and vacant land. By 1938, historic aerial photographs depict the Subject Property with several commercial and residential structures, as a portion of a railyard, roadways and vacant/wooded land.
1950	Historic Sanborns	Historic Sanborn maps depict the Subject Property with portions of manufacturing, a fuel oil tank associated with The Shedd Co., a dwelling, and Beall-Thomas Coal Co. (coal yard and coal tanks.)

Date(s)	Source(s)	Interpreted History
1952 - 2017	Historic Topos Historic Aerials Historic Sanborns	Historic topographic maps and historic aerial photographs depict the Subject Property as developed with portions of several commercial and residential structures, as a portion of a railyard, roadways and vacant/wooded land. Historic Sanborns depict the Subject Property with portions of vacant lots/land, dwellings, a metal storage yard, manufacturing, railroad tracks, a warehouse, and a paint factory.
North Adjacent – Michigan Avenue station to 130th Street station		
1892 - 1929	Historic Topos Historic Sanborns	Historic topographic maps depict the north adjacent properties with unspecified structures, vacant land, railroad tracks, and a portion of a railyard. Historic Sanborn maps depict the north adjacent properties with Kendall Ice Cream Co. (factory) including a gasoline tank, 33rd Ward city yard, a storefront, dwelling, and vacant lots.
1938 - 1950	Historic Aerials Historic Sanborns	By 1938, historic aerial photographs depict the north adjacent properties with several commercial and residential structures, railroad tracks, a suspect junkyard, a portion of a railyard, and vacant land. Historic Sanborn maps depict the north adjacent properties with dwellings, The Shedd Co. Manufacturers of Ice Cream (factory) including a gasoline tank, vacant lots, and Beall-Thomas Coal Co. (coal yard).
1952 - 2017	Historic Topos Historic Aerials Historic Sanborns	Historic topographic maps and aerial photographs depict the north adjacent properties with several commercial and residential structures, railroad tracks, a portion of a railyard, and vacant land. Historic Sanborn maps depict the north adjacent properties with dwellings, vacant lots, a metal storage yard, manufacturing, warehouses, railroad tracks, vacant land, and a factory for the years 1989 and 2004.

Date(s)	Source(s)	Interpreted History
South Adjacent – Michigan Avenue station to 130th Street station		
1892 - 1950	Historic Topos Historic Sanborns	Historic topographic maps depict the south adjacent properties as vacant land, unspecified structures, railroad tracks, and a portion of a railyard. By 1938, historic topo maps and historic aerial photographs depict the south adjacent properties with several commercial and residential structures, a municipal park, vacant land, railroad tracks, and a portion of a railyard. Historic Sanborn maps depict the south adjacent properties with railroad tracks and vacant land/lots.
1953 - 2017	Historic Topos Historic Aerials Historic Sanborns	By 1953, the historic topographic maps and historic aerial photographs depict the south adjacent properties with commercial and residential structures, vacant land, railroad tracks, a scrap yard, a municipal park, and the Beaubien Forest Preserve. Historic Sanborn maps depict the south adjacent properties with railroad tracks, vacant land/lots, manufacturing facility, and Kensington Park.
East Adjacent – Michigan Avenue station to 130th Street station		
1892 - 1893	Historic Topos	Historic topographic maps depict the east adjacent properties as vacant land, railroad tracks, and early roadways.
1900 - 1929	Historic Topos	By 1900, the historic topographic maps and historic aerial photographs depict the east adjacent properties with vacant land, unspecified structures and railroad tracks.
1938 - 2017	Historic Topos Historic Aerials Historic Sanborns	By 1938, the topo maps and aerial photographs depict the east adjacent properties with commercial and residential structures, vacant/wooded land, and railroad tracks. Historic Sanborn maps depict the east adjacent properties with Beaubien Forest Preserve, vacant land, and railroad tracks.
West Adjacent – Michigan Avenue station to 130th Street station		
1892 - 1911	Historic Topos Historic Sanborns	Historic topographic maps depict the west adjacent properties with vacant land, early roadways, and unspecified structures. Historic Sanborn maps

Date(s)	Source(s)	Interpreted History
		depict the west adjacent properties with vacant land and railroad tracks.
1929 - 1938	Historic Topos Historic Aerials	By 1929, historical topographic maps depict the west adjacent properties with vacant land, unspecified structures, a sewage disposal plant, and a portion of a railyard/railroad tracks.
1950 - 2017	Historic Topos Historic Aerials	Historical topographic maps depict the west adjacent properties with commercial and residential structures, sewage disposal plant, a portion of a railyard/railroad tracks, Kensington Park, and with the Altgeld Gardens residential dwellings. Historic Sanborn maps depict the west adjacent properties with the Sanitary District of Chicago (sewage treating plant) for the year 1950; and with vacant land and railroad tracks for the years 1989 and 2004.

Since 1892, the start of the available historical record, the greater area surrounding the Subject Property has generally been developed. Early records depict the greater area with roads, rail lines, and some structures, indicating development and use of the area. As noted in the Hazardous Materials Technical Memorandum, dated August 21, 2013 and prepared by CWC Transit Group, rail lines have been present in or adjacent to the Subject Property since 1892. By the 1930's, the historical records depict the Subject Property, adjoining properties, and greater area as generally fully developed. Generally historical records from the 1930's to the present day depict the initial development of isolated areas, or the redevelopment of isolated areas.

Section 7 - Regulatory Review

7.1 Regulatory Agency Inquiries

EDI requested records or information about the Subject Property or facilities in the surrounding area from the governmental agencies listed in the following sections.

7.1.1 Regulatory Agency Maintained Websites

EDI reviewed the following federal, state, or local websites or online databases in order to obtain further information about the Subject Property or facilities listed in the database report.

- City of Chicago Data Portal
- City of Chicago Department of Public Health Data Portal
- Cook County Assessor's website
- Cook County Recorder's website
- Office of the State Fire Marshals (OSFM's) website and UST database
- Illinois Environmental Protection Agency's (IEPA's) Bureau of Land (BOL) database
- IEPA's LUST database
- IEPA's Document Explorer database
- USEPA's Enforcement and Compliance History Online (ECHO) database

7.1.2 City of Chicago Records

EDI did review regulatory files published by the City through the City of Chicago Data Portal and the City of Chicago Department of Public Health Data Portal. EDI also reviewed regulatory file information obtained as part of the Hazardous Materials Technical Memorandum prepared by CWC Transit Group and dated August 21, 2013. Instances where records were obtained or reviewed are cited as they arise in this report.

7.1.3 Illinois Environmental Protection Agency

EDI did review regulatory files published by the IEPA through the IEPA's LUST database and the IEPA's Document Explorer database. EDI also reviewed regulatory file information obtained as part of the Hazardous Materials Technical Memorandum prepared by CWC Transit Group and dated August 21, 2013. Instances where records were obtained or reviewed are cited as they arise in this report.

7.1.4 United States Environmental Protection Agency

EDI did review regulatory files published by the USEPA through the ECHO database and related interlinking databases. EDI also reviewed regulatory file information obtained as part of the Hazardous Materials Technical Memorandum prepared by CWC Transit Group and dated August 21, 2013. Instances where records were obtained or reviewed are cited as they arise in this report.

7.2 Database Findings

EDI obtained environmental database information for the Subject Property and the surrounding area from Environmental Data Resources, LLC (EDR) in an EDR Area/Corridor Report. EDR obtains environmental databases published by local, state, tribal, and federal agencies, EDR then compiles and maps the information. This allows for searches to be conducted and reported based on the location of the Subject Property. EDR's environmental database of information includes the Practice's Standard Environmental Records Sources and, in most cases, additional federal, state, and local record sources. A complete listing of the databases searched is available in EDR's EDR Area/Corridor Report, a copy of which is included as Appendix D.

The search of database information provided in the EDR Area/Corridor Report was performed to the Approximate Minimum Search Distances (AMSD) listed in the Practice. The EDR Area/Corridor Report identified a total of 319 mapped sites in the AMSD. Unmappable (orphan) sites (listed in the EDR Radius Map Report) were also evaluated to identify a potential location within the AMSD. Those orphan sites that could be determined to be with the AMSD were further evaluated and are discussed below as appropriate. An excerpt of the EDR Area/Corridor Report is presented below as Figure 7-1. This figure is the Key Map of the EDR Area/Corridor Report and presents the approximate locations of the sites mapped by EDR.

Figure 7-1: EDR Area/Corridor Report Key Map

Due to the large areas and irregular shapes of some of the listings, and the mapping methods utilized by EDR, the actual locations may not correspond to the post office addresses, and the actual distances to the site may not correspond to the database distance.

7.2.1 Subject Property

The Subject Property was listed in one or more of the databases searched by EDR and reported in the EDR Area/Corridor Report. A summary of the listing(s) is provided below.

Table 7-1: Subject Property Database Summary

Facility Name & Address	Databases	Comments
Subject Property – 95th Street station to 103rd Street station		
Chicago Park District - Lake Michigan Casino Pier 63rd Street, East of Lake Shore Drive	Facility Index System/Facility Registry System (FINDS)	This facility was mapped by EDR as being on the Subject Property. However, a review of the provided record indicates this facility is actually located approximately one-mile northeast of the Subject Property. Based on the distance from the Subject Property, this listing is not considered evidence of a REC.
Soon Lee 9832 Wentworth Avenue	EDR Historical Cleaners (EDR Hist Cleaners)	This facility was listed in the EDR Hist Cleaners database. The EDR Hist Cleaners database is a proprietary database created by EDR from a review of select city directory listings. The database was reportedly created by reviewing city directory listings for possible dry cleaning establishments. The categories of facilities reviewed and noted by EDR in creating the database reportedly included, but were not limited to, dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. Therefore, facilities identified by this database may not have actually conducted dry cleaning operations on the premise. This facility was identified as a “laundry” facility in city directory records from 1923. Given the era in which this facility operated, the identification of this facility as a “laundry”, and its mapped location within the existing

Facility Name & Address	Databases	Comments
		man-made cut for the ramps connecting I-57 and I-94, this listing is not considered evidence of a REC.
Subject Property – 103rd Street station to 111th Street station		
403 - 405 W. 103rd Street	Illinois Chicago Environmental (Chicago Env)	This address was listed in the Chicago Env database. The Chicago Env database is a lookup table to determine if environmental records exist in a Chicago Department of Public Health (CDPH) environmental dataset for a given address. This facility was noted as being listed for records relating to filed complaints and an Asbestos and Demolition Notification (NESHAPS). A review of CDPH's online databases identified a record of one complaint from 1994 described as a friendly check for ordinance violations. No corresponding record of violations was noted. The online database also noted that notice of intent for demolition or renovation that would disturb asbestos containing materials was recorded in 1996. Based on the above information, this listing is not considered evidence of a REC.
O'Connell Electric 405 W. 104th Street	FINDS, Illinois Bureau of Land (IL BOL)	This facility was listed in the FINDS and IL BOL databases. A review of the provided database information and the IEPA's BOL online database identified that the facility was listed in the states solid waste program in 1986. Based on the lack of further records, history of permits, or violations associated with the facility, this listing is not considered evidence of a REC.
B Van Dir Meer & Sons 400 W. 104th Street	Tanks, Chicago Env	This facility was listed in the Tanks and Chicago Env databases. A review of the records provided by EDR identified work in 1956 to inspect three 20,000-gallon fuel oil tanks and remove unspecified existing tanks. The historical presence of fuel oil tanks at this facility is evidence of a REC.
400 W. 105th Street	Chicago Env	This address was listed in the Chicago Env database with a record of an inspection. A review of the CDPH's online database identified records of a

Facility Name & Address	Databases	Comments
		“miscellaneous” visual inspection conducted in March of 2005 of “Calumet Tire”. Based on a lack of further records for this facility and no corresponding records of violations, this listing is not considered evidence of a REC.
410 W. 105th Street	Chicago Env, FINDS	This address was listed in the Chicago Env database with a record of an inspection and NESHAPS notification. A review of the CDPH’s online database identified a notice of intent for demolition or renovation that would disturb asbestos containing materials in June of 2013. An associated inspection identified that work was completed. Based on the above information this listing is not considered evidence of a REC.
Illinois Bell Telephone/ AT&T IL 413 W. 105th Street	LUST, Illinois Recovered Government Archive LUST (IL RGA LUST), Tanks, SPILLS, IL BOL, Resource Conservation and Recovery Act - No longer Generating/No Longer Reporting (RCRA-NonGen/NLR), FINDS, Enforcement and Compliance History Online (ECHO), Chicago Env	The UST database listing identifies the facility was assigned OSFM facility ID number: 2007809. A review of the listing and the OSFM’s online UST database identified that two 6,000-gallon gasoline USTs and one 550-gallon used oil UST were reported as removed in 1988. According to the records obtained from EDR, a spill was reported on February 2, 1988 to IEMA by a representative of Illinois Bell who reported a release of approximately 3,500-gallons from a UST that was “taking on water”. A corresponding LUST incident was generated and assigned incident number 880112. A review of the IEPA’s online LUST database and document explorer database identified that a NFR letter was issued for the LUST incident in March of 2005. Among the terms and conditions of the NFR letter, a land use restriction was specified which noted that use of the facility was limited to industrial or commercial purposes. The issuance of a NFR letter for the LUST incident with land use restrictions is evidence of a CREC.

Facility Name & Address	Databases	Comments
		This facility was listed in the Chicago Env and Tanks database for records of: • Installation of one 6,700-gallon fuel oil UST in 1950 • Installation of one 1,000-gallon gas UST in 1958 • Installation of one 550-gallon fuel oil UST in 1959 • Installation of one 5,000-gallon fuel oil UST in 1971 • Installation of two 6,000-gallon fiberglass gas USTs in 1974 • Removal of one 6,000-gallon UST in February 1988 • Removal of two 6,000-gallon and one 550-gallon USTs in February 1988 The reported installation of six USTs at the facility and corresponding records of the removal of four USTs at the facility would indicate the potential presence of two USTs that still may remain in the subsurface. The potential continued presence of two USTs at the facility is evidence of a REC. The RCRA-NonGen/NLR listing identified that the facility registered as a non-generator of hazardous waste in 1984 and had no history of violations.
Fred Syhora 401 W. 105th Street	Tanks, Chicago Env.	This facility was listed in the Chicago Env and Tanks database for records of installation and subsequent abandonment of four USTs. The tanks were reportedly installed in 1957 and consisted of two 15,000-gallon USTs with unspecified contents, and two 3,500-gallon USTs for used motor oil. In 1970, two 15,000-gallon USTs and two 4,000-gallon USTs were reportedly abandoned in place by filling with sand. The reported presence of four abandoned USTs at this facility is evidence of a REC.

Facility Name & Address	Databases	Comments
JCK Auto Depot Inc. 411 W. 105th Street	IL BOL, FINDS	This facility was listed in the FINDS and IL BOL databases. A review of the provided database information and the IEPA's BOL online database identified that the facility was listed in the states solid waste program in 1984. Based on the lack of further records, history of permits, or violations associated with the facility, this listing is not considered evidence of a REC.
Midland Chemical Corporation 400 W. 107th Street	Tanks, Chicago Env	This facility was listed in the Tanks and Chicago Env database for records of UST inspection and installation. Records indicate one 3,000-gallon UST and one 7,000-gallon UST were inspected in 1962. In 1975 one 2,000-gallon and one 4,000-gallon mineral spirits USTs were reportedly installed. The Chicago Env database also identified a history of enforcement actions and inspections at the facility. A review of the CDPH's online databases for inspections and enforcement identified that on January 9, 1998 the facility was inspected by city staff who issued two violations to a Larry Brown for the presence of "auto parts and oil on the ground". A follow up inspection on February 23, 1998 noted the site to be "cleaned". The reported presence of what appears to be four separate USTs at this facility, and the reported issuance of violations for the presence of oil on the ground is evidence of a REC.
407 - 411 W. 107th Street	Chicago Env	This facility was listed under several addresses in the Chicago Env database for records of complaints and inspections that appear to be related to what was an apparent auto junk yard. The complaints filed with the city on April 3, 1996, May 6, 1996, and May 30, 1996 identified an apparent abandoned auto junk yard. Two of the complaints detailed that "the rear and side lots [are] filled with car parts and junk, and that a large quantity fluids and grease are present".

Facility Name & Address	Databases	Comments
		An inspection by city staff was conducted on February 20, 1998 noting that the "site [was] cleaned up due to accumulation of junk." An inspection of the facility by city staff was also conducted on January 21, 2000 relating to a demolition. The inspection noted the demolition was complete. The reported presence of an auto junk yard with reports of large quantities of fluids and greases being present is evidence of a REC.
AT&T Mobility 405 W. 107th Street	IL AST, Chicago Env	This facility was listed in the IL AST database for record of one AST. The Chicago Env database listing for records of a permit. A review of CDPH's online permit database identified records of an air pollution control permit being issued for an emergency generator. A search of the address on the online Cook County GIS Data Viewer identifies an aerial image of the property with a cellular communications tower. The presence of an AST, with no associated records of a release, and issuance of air control permit are not considered evidence of a REC.
355 W. 109th Street	Chicago Env	This address was listed in the Chicago Env database for records of complaints and inspections. A review of the CDPH's online complaints and inspections databases identified records of an inspection on July 23, 1998 of vacant land next to a railroad and that no violations were found. Based on the above information, this facility is not considered evidence of a REC.
355 W. 109th Place	Chicago Env	This address was listed in the Chicago Env database for records relating to NESHAPS notification. A review of the CDPH's online databases identified that a notice of intent for demolition or renovation that would disturb asbestos containing materials was recorded in

Facility Name & Address	Databases	Comments
		1998. Based on the above information, this listing is not considered evidence of a REC.
Harris Transmission 410 W. 109th Street	EDR Hist Auto	The facility was listed in the EDR Hist Auto database as an automotive transmission repair shop from 1991 to 2000. This listing is considered evidence of REC.
Subject Property – 111th Street station to Michigan Avenue station		
William Ransom Transportation/ Ransom Transport/ Ransom Transport Bus Garage 352 W 110th Street	LUST, UST, Tanks, SPILLS, RCRA-Very Small Quantity Generator (VSQG), FINDS, ECHO, ERNS, Chicago Env	The facility was listed in the UST and Tanks database with a record of one 6,000-gallon gasoline UST that was reported as removed. CDPH online database records indicate the tank was installed in 1972. The facility was listed in the ERNS database for a reported spill of an estimated 20-gallons of gasoline that occurred on January 20, 1999 that overflowed from a storage tank. The responsible party was listed as Avalon Petroleum Co. The facility was listed in the LUST and SPILLS database for a release of gasoline that was reported on February 19, 1999 and was assigned incident number 990399. A review of the IEPA's online LUST and document explorer databases identified that 20 and 45-day reports were submitted for the incident, but that no NFR letter has been issued, and that the IEPA does not appear to consider the issue resolved. Based on the 45-day report, the UST appears to have been located south adjacent to the existing building. The RCRA-VSQG listing identified that the facility apparently registered as a generator of hazardous waste in 1999 and was a generator of ignitable wastes (Waste Code D001). No violations were reported with the RCRA-VSQG listing.

Facility Name & Address	Databases	Comments
		The facility was listed in the Chicago Env database for records relating to complaints, permits, and tanks. A review of the CDPH's online databases identified records associated with the above described UST and LUST incident. The reported presence of an open unresolved LUST incident for a gasoline release at the facility is evidence of a REC.
349 W. 110th Street	Chicago Env	This address was listed in the Chicago Env database for records relating to complaints and inspections. A review of the CDPH's online databases identified a complaint for "junkyard issues" that was reported on January 8, 1998. An inspection by city staff on January 12, 1998 reportedly "found no such address". Based on the above information, this listing is not considered evidence of a REC.
348 W. 110th Place	Chicago Env	This address was listed in the Chicago Env database for records relating to NESHAPS notification and inspections. A review of the CDPH's online database identified that a notice of intent for demolition or renovation that would disturb asbestos containing materials was recorded in 2001. Three inspections in March and April of 2001 by city staff did not identify any violations or apparent issues. Based on the above information, this listing is not considered evidence of a REC.
356 W. 111th Street	Chicago Env	This address was listed in the Chicago Env database for records relating to NESHAPS notification. A review of the CDPH's online databases identified that a notice of intent for demolition or renovation that would disturb asbestos containing materials was recorded in 1994. Based on the above information, this listing is not considered evidence of a REC.
347 W 111th Street	Chicago Env	This address was listed in the Chicago Env database for records relating to complaints and inspections. A review of the CDPH's online databases identified that

Facility Name & Address	Databases	Comments
		a complaint was filed with the city on October 6, 2005 that detailed a business was burning something with very strong odors that was making the complainant feel ill. The complainant noted the odors were coming from a stack at the facility. On October 6, 2005 city staff conducted an inspection and observed unusual odors from the stack. However, city staff were unable to gain access to the facility. The incident was reportedly referred to the Air Pollution Prevention Group for follow up. A review of the Cook County online GIS data viewer for the given address identified this facility as part of a side yard for the west adjacent residential property. Based on the above information, a lack of additional records of complaints, inspections, or other environmental related items, this listing is not considered evidence of a REC.
348 W. 111th Place	Chicago Env	This address was listed in the Chicago Env database for records relating to NESHAPS notification. A review of the CDPH's online databases identified that a notice of intent for demolition or renovation that would disturb asbestos containing materials was recorded in 1998. Based on the above information, this listing is not considered evidence of a REC.
336 W. 112th Street	Chicago Env	This address was listed in the Chicago Env database for records relating to NESHAPS notification. A review of the CDPH's online databases identified that a notice of intent for demolition or renovation that would disturb asbestos containing materials was recorded in 2001. Based on the above information, this listing is not considered evidence of a REC.
11325 S. Princeton Avenue	Chicago Env	This address was listed in the Chicago Env database for records relating to NESHAPS notification. A review of the CDPH's online databases identified that two notices of intent for demolition or renovation that would disturb asbestos containing materials were recorded in 2016. Based on the above information, this listing is not considered evidence of a REC.

Facility Name & Address	Databases	Comments
11336 S. Yale Avenue	Chicago Env	This address was listed in the Chicago Env database for records relating to enforcement and inspections. A review of the CDPH's online databases identified that an inspection occurred on February 4, 1998 at the facility where city staff observed a large open fire in the rear yard and that a work crew was removing roofing materials and disposing of it by burning. Two citations were reportedly issued. A review of the Cook County online GIS data viewer for the given address identifies this facility as a single-family home. Based on the above information and the apparent burning of roofing materials on the ground, this listing is considered evidence of a *de minimis* condition.
11401 S. Wentworth Avenue	Chicago Env, FINDS	This address was listed in the Chicago Env database for records relating to complaints, inspections, and NESHAPS notification. A review of the CDPH's online databases identified a history of two complaints. One complaint filed on August 31, 1995 identified that a truck dumped a load of used tires at the property and left. A second complaint filed on January 8, 1998 identified possible "junkyard issues". A follow up inspection by city staff on February 4, 1998 did not apparently identify any issues. Two notices of intent for demolition or renovation that would disturb asbestos containing materials were recorded in April 2012. A subsequent inspection by city staff in May 2012 noted that demolition of the facility was completed to grade. Based on the above information, this listing is not considered evidence of a REC.
Clearwater Technology 11426 S. Perry Avenue	RCRA-NonGen/NLR, FINDS, ECHO	This facility was mapped by EDR as being adjacent to the Subject Property. However, by address it is located on the Subject Property. The facility first apparently registered as a generator of hazardous waste in 1980 but was not reported as a LQG of hazardous waste. The facility was a generator of the following hazardous wastes: chromium (D007),

Facility Name & Address	Databases	Comments
		benzene (D018), barium (D005), lead (D008), methyl ethyl ketone (D035), ignitable waste (D001), corrosive waste (D002), and halogenated solvents (F001). No records of violations were noted with the listing. The historic presence of a generator on the Subject Property is evidence of a *de minimis* condition.
11443 S. Perry Avenue and 52 W. 115th Street	Chicago Env, FINDS	This facility was listed in the Chicago Env database for records relating to inspections and NESHAPS notification. A review of the CDPH's online databases identified that a notice of intent for demolition or renovation that would disturb asbestos containing materials was recorded in February 2007 for the address of 52 W. 115th Street. A notation with the record identified that the facility also had an additional address of 11443 S. Perry Avenue. City staff conducted an inspection on March 1, 2007 and noted that the site was "100% grade level." A second inspection was conducted on May 18, 2007 that was noted to be a "C&D recycling permit compliance follow up." A search of CDPH's online database records for permits and enforcement of the given addresses did not identify a corresponding record of a permit or record of enforcement actions. Based on the above information, this listing is not considered evidence of a REC.
42 W. 115th Street	Chicago Env	This address was listed in the Chicago Env database for records relating to NESHAPS notification. A review of the CDPH's online databases identified that a notice of intent for demolition or renovation that would disturb asbestos containing materials was recorded in August 2013.
48 W. 115th Street	Chicago Env	This address was listed in the Chicago Env database for records relating to complaints, inspections, and NESHAPS notification. A review of the CDPH's online databases identified that a complaint was filed on May 7, 2001 related to an abandoned building being a

Facility Name & Address	Databases	Comments
		hazard. An associated inspection by city staff on May 7, 2001 identified that the building needed to be secured until demolition occurs. A notice of intent for demolition or renovation that would disturb asbestos containing materials was recorded in November 2006. Two subsequent inspections occurred in November 2006 by city staff which noted the demolition of the building. Based on the above information, this listing is not considered evidence of a REC.
115th and State Street	ERNS	This address was listed in the ERNS database for an incident reported to occur on May 14, 2013 where a freight train struck a pedestrian who was on the Union Pacific Railroad tracks. The incident was reported as a “railroad non-release.” Based on the above information, this listing is not considered evidence of a REC.
101 E 115th Street	Chicago Env	This address was listed in the Chicago Env database for records relating to inspections and NESHAPS notification. A review of the CDPH’s online databases identified that three notices of intent for demolition or renovation that would disturb asbestos containing materials were recorded in 2000 and 2003. Subsequent inspections by city staff occurred which note the demolition of structures. Based on the above information this listing is not considered evidence of a REC.
35 E. 115th Street	Chicago Env	This address was listed in the Chicago Env database for records relating to inspections. A review of the CDPH’s online databases identified that a NESHAPS inspection by city staff occurred on January 7, 2005. The inspector noted that “no activity” was occurring. Based on the above information this listing is not considered evidence of a REC.
23 E. 115th Street	Chicago Env	This address was listed in the Chicago Env database for records relating to inspections. A review of the CDPH’s online databases identified that a demolition related inspection by city staff occurred on October

Facility Name & Address	Databases	Comments
		21, 1997. The inspector noted that the building to be demolished was still standing. Based on the above information this listing is not considered evidence of a REC.
1 E. 115th Street	Chicago Env	This address was listed in the Chicago Env database for records relating to inspections. A review of the CDPH's online databases identified that inspections by city staff occurred on May 6, 2011 and May 17, 2011 related to apparent unsatisfactory condition of construction fencing. Based on the above information this listing is not considered evidence of a REC.
Church 17 E. 115th Street	Chicago Env, FINDS	This facility was listed in the Chicago Env database for records relating to inspections and NESHAPS notification. A review of the CDPH's online databases identified that a notice of intent for demolition was recorded in April 2012. A subsequent inspection by city staff on April 12, 2012 identified that the demolition was complete. Based on the above information this listing is not considered evidence of a REC.
Triangle Transmission 35 W. 115th Street	LUST, RGA LUST, UST, Tanks, RCRA-NonGen/ NLR, FINDS, ECHO, EDR Hist Auto, Spills, BOL, Chicago Env	The EDR Hist Auto listing identified the presence of this facility from 1977 to 2000. Observations during the site reconnaissance noted the continued presence of this facility under the name Donald's Auto Repair. This facility was listed in the UST databases with record of two 1,000-gallon gasoline tanks that were reported as removed on October 13, 1999. An associated LUST incident was reported on October 13, 1999 and assigned incident number 992324. A review of the IEPA's online LUST and document explorer databases identified that a 20-day report was filed, but that no NFR letter has been issued, and that the IEPA does not appear to consider the issue resolved.

Facility Name & Address	Databases	Comments
		The RCRA-NonGen/NLR listing identified that the facility registered as a small quantity generator in 1999 of ignitable wastes (D001). The facility reportedly changed its status to non-generator in 2019. No violations were noted in association with the listing. The Tanks listings identified that in 1959 that work to replace one 1,000-gallon gas UST and remove two 500-gallon USTs reportedly occurred. In 1966 work was conducted to reportedly inspect one 2,000-gallon gas tank and remove one 1,000-gallon tank. This facility was listed in the Chicago Env database for records relating to complaints, inspections, permits and tanks. A review of the CDPH's online databases identified that a complaint was filed on June 6, 1996 for "Triangle Transmission Oil Dumped." No associated records for inspection or enforcement for this incident were identified. The records relating to inspections, permits, and tanks relate to remove of the above noted USTs in 1999. The presence of an automotive repair facility since at least 1977, the unresolved LUST incident for a release of gasoline, as well a record of a reported release of oil is evidence of a REC.
13 E. 115th Street	Chicago Env.	This address was listed in the Chicago Env database for records relating to inspections and NESHAPS notification. A review of the CDPH's online databases identified that a notice of intent for demolition or renovation that would disturb asbestos containing materials was recorded in 1996 and 2011. An inspection by city staff in 2011 noted the demolition. Based on the above information this listing is not considered evidence of a REC.

Facility Name & Address	Databases	Comments
Asdooraian Danl 25 E. 115th Street	Hist Cleaners, Chicago Env, FINDS	This address was listed in the Chicago Env database for records relating to inspections and NESHAPS notification. A review of the CDPH's online databases identified that a notice of intent for demolition or renovation that would disturb asbestos containing materials was recorded in December 2008. A subsequent inspection by city staff in January 2009 identified that the demolition was complete. Based on the above information the Chicago Env listing is not considered evidence of a REC. This facility was listed in the Hist Cleaners database and identified as a "carpet cleaners" in city directory records from 1928. Given the era in which this facility operated and the identification of this facility in a single year of records, this listing is not considered evidence of a REC.
29 E. 115th Street	Chicago Env, FINDS	This address was listed in the Chicago Env database for records relating to inspections and NESHAPS notification. A review of the CDPH's online databases identified that a notice of intent for demolition or renovation that would disturb asbestos containing materials was recorded in December 2008. A subsequent inspection by city staff in January 2009 identified that the demolition was complete. Based on the above information this listing is not considered evidence of a REC.
11505 S. State Street	Chicago Env.	This address was listed in the Chicago Env database for records relating to inspections and NESHAPS notification. A review of the CDPH's online databases identified that a notice of intent for demolition or renovation that would disturb asbestos containing materials was recorded in December 2008. A subsequent inspection by city staff in December 2008 identified that the demolition was complete. Based on the above information this listing is not considered evidence of a REC.

Facility Name & Address	Databases	Comments
11507 S. State Street	Chicago Env	This address was listed in the Chicago Env database for records relating to inspections and NESHAPS notification. A review of the CDPH's online databases identified that a notice of intent for demolition or renovation that would disturb asbestos containing materials was recorded in December 2008. A subsequent inspection by city staff in December 2008 identified that the demolition was complete. Based on the above information this listing is not considered evidence of a REC.
11511 S. State Street	Chicago Env	This address was listed in the Chicago Env database for records relating to inspections and NESHAPS notification. A review of the CDPH's online databases identified that a notice of intent for demolition or renovation that would disturb asbestos containing materials was recorded in December 2008. A subsequent inspection by city staff in January 2009 identified that the demolition was complete. Based on the above information this listing is not considered evidence of a REC.
11515 S. State Street	Chicago Env	This address was listed in the Chicago Env database for records relating to inspections and NESHAPS notification. A review of the CDPH's online databases identified that a notice of intent for demolition or renovation that would disturb asbestos containing materials was recorded in December 2008. A subsequent inspection by city staff in December 2008 identified that the demolition was complete. Based on the above information this listing is not considered evidence of a REC.
Cuter Sefer Oil 11521 S. State Street	Tanks, Chicago Env	The 1950 Sanborn Map identifies this facility as a gas station with three USTs. This facility was listed in the Chicago Env and Tanks databases. The Tanks listing identified that one 1,000-gallon gas UST was reportedly replaced in 1955. The Chicago Env database listing for this facility identified records relating to inspections and tanks. A review of the

Facility Name & Address	Databases	Comments
		CDPH's online database identified that the tank record was for the above noted UST. The CDPH's online databases identified a series eight inspections spanning from December 2013 to February 2015 which noted that the facility was a vacant city owned lot where fly dumping had previously occurred, and which had been cleaned up. The inspections were conducted to observe the lot for evidence of additional fly dumping - none of which was noted. The reported presence of a 1,000-gallon UST at the facility, combined with a lack of records indicating the UST was removed, as well as the reported history of fly dumping at the facility is evidence of a REC.
11517 S. State Street	Chicago Env	This address was listed in the Chicago Env database for records relating to inspections. A review of the CDPH's online databases identified that a reported demolition inspection was conducted by city staff in February 2006, which noted "no demo activity." Based on the above information this listing is not considered evidence of a REC.
11581 S. State Street	Chicago Env	This address was listed in the Chicago Env database for records relating to complaints and inspections. A review of the CDPH's online databases identified that a complaint was filed in May 2012 and November 2013 for fly dumping of materials. Subsequent inspection by city staff in June 2012 identified a "small pile" of bricks and concrete in the public way. A subsequent inspection by city staff in November 2013 identified four garbage bags of leaves. In both instances the material was referred to streets and sanitation for pickup. Based on the above information this listing is not considered evidence of a REC.
Former Roseland Plaza	FINDS	This facility was listed in the FINDS database with an Agency Compliance and Enforcement System (ACES) record. ACES is the Illinois EPA Project to facilitate permitting. This listing did not note or indicate

Facility Name & Address	Databases	Comments
11500-11582 S. Michigan Avenue		any permit type for the property. Based on the above information this listing is not considered evidence of a REC.
Oak Park National Bank 11500 S. Michigan Avenue	Tanks, Chicago Env	This facility was listed in the Tanks database with two records as well as the Chicago Env database. The first tank related record identified that 315-gallon USTs, one 1,000-gallon UST, one 2,000-gallon UST were reportedly installed in May of 1958. The second tank record indicates one 2,000-gallon UST and five 300-gallon USTs were reportedly installed in March of 1959. The facility was listed in the Chicago Env database for records relating to complaints, NESHAPS notification, inspections, and tanks. A review of the CDPH's online databases identified that a complaint was filed in September of 1996 for fly dumping in a residential area. An inspection by city staff at the time noted the given address was a drug store in a strip mall and that the inspector was unable to establish if fly dumping occurred. A complaint was filed in February 2000 relating to an oil tank being present in office space in the basement level of House of Peace bookstore. An inspection by city staff at the time noted that they observed the entire basement but did not observe an oil tank. CHPH's online records identified that notice of intent for demolition or renovation that would disturb asbestos containing materials was recorded in 2006. A series of subsequent inspections noted the progressive demolition of the structure. The reported historic presence of USTs being installed at the facility, with no corresponding record of their removal, is evidence of a REC.
Flair Cleaners/ Betty Bright Cleaners	Hist Cleaners, RCRA-VSQG, Chicago Env,	This facility was listed in the Hist Cleaners database under several names from 1981 to 2003 and was noted as a dry cleaning plant.

Facility Name & Address	Databases	Comments
11518 S. Michigan Avenue	AIRS, BOL, FINDS, ECHO	The facility registered as a conditionally except small quantity generator (CESQG) of hazardous waste in 2000. Wastes generated were reported to consist of undefined wastes (D000), tetrachloroethylene (D039), trichloroethylene (D040), and various spent halogenated solvents (F002). No RCRA violations were noted in association with the listing. This facility was listed in the Chicago Env database for records relating to complaints and inspections. A review of CDPH's online databases identified that a complaint was filed in August 2004 that the facility was "dumping used chemical solution into the sewers throughout the area." CHPH records also identified a series of eight inspections of the facility by city staff that were conducted between August 2002 and March 2007. Six of these inspections appeared to be regular periodic inspections of the facility and did not report issues of concern. Two of the inspection were noted to be conducted in response to the above complaint. These inspections were conducted on August 3, 2004 and August 12, 2004 and did not report to find evidence of the illegal disposal of materials in the sewer behind the shop. Based on the above information, the historical presence of a dry cleaning plant is evidence of a REC.
11552 S. Michigan Avenue	Chicago Env	This address was listed in the Chicago Env database for records relating to complaints and inspections. A review of the CDPH's online databases identified that a complaint was filed in August 2003 against a Church's Chicken restaurant. The complaint detailed that smoke from a broken exhaust system was entering a residence. A subsequent air quality inspection by city staff was conducted on September 2, 2003 with a note that the restaurant had reportedly

Facility Name & Address	Databases	Comments
		replaced the broken exhaust system. Based on the above information this listing is not considered evidence of a REC.
Clark Service Station/ Bobs Super 100/ Clark Oil and Refining 11555 S. Michigan Avenue	UST, LUST, EDR Hist Auto	The facility was listed in the UST database with a history of two 6,000-gallon gasoline and one 7,500-gallon gasoline UST reportedly removed in 1991. The facility was identified in the EDR Historic Auto database as a gasoline service station from 1982 to 1992. A gasoline LUST incident occurred on September 5, 1991. An NFR letter was recorded January 9, 1995. A review of the IEPA's online LUST database did not identify any requirements for engineered barrier or institutional controls with the NFR letter. Based on the reported status of the NFR letter, with no noted requirements for institutional controls or engineered barriers, this listing is considered evidence of a HREC.
11564 S. Michigan Avenue	Chicago Env	This address was listed in the Chicago Env database for records relating to complaints. A review of the CDPH's online databases identified that a complaint was filed in August 1994 for reported fly dumping in the area. No corresponding record of subsequent inspection by city staff was identified. Based on the above information this listing is not considered evidence of a REC.
11592 S. Michigan Avenue	Chicago Env	This address was listed in the Chicago Env Database for records relating to inspections and NESHAPS notification. A review of the CDPH's online databases identified that notices of intent for demolition or renovation that would disturb asbestos containing materials were recorded in December 2018. An inspection by city staff in December 2018 identified that the demolition was complete. Based on the above

Facility Name & Address	Databases	Comments
		information this listing is not considered evidence of a REC.
Subject Property - Michigan Avenue station to 130th Street station		
11634 S. Prairie Avenue	Chicago Env	This address was listed in the Chicago Env database for records relating to complaints and inspections. A review of the CDPH's online databases identified that two complaint were filed in October 2011 related to reported strong sewer like odors in the area. Subsequent inspection by City staff did not identify unusual odors. Based on the above information this listing is not considered evidence of a REC.
The Shedd Company 301 E. 117th Street	Tanks, Chicago Env	This facility was listed in the Chicago Env and Tanks databases. The Tanks listing identified that one 1,000-gallon gas tank was reportedly replaced in 1948, one 4,000-gallon fuel oil tank was reportedly installed in 1956, and one 6,000-gallon fuel oil tank was reportedly installed in 1957. The Chicago Env database listing for this facility identified records relating to NESHAPS notification and tanks. A review of the CDPH's online database identified that the tank records were for the above noted USTs, while the NESHAPS record identified that a notice of intent for demolition or renovation that would disturb asbestos containing materials was recorded in April 1997. The reported presence of a 1,000-gallon gas, a 4,000-gallon fuel oil, and 6,000-gallon fuel oil USTs at the facility, combined with a lack of records indicating the UST were removed, is evidence of a REC.
American Clybourn Finishing 11730 S. Front Avenue	RCRA-VSQG, FINDS, ECHO	This facility as depicted in the 1989 Sanborn map as a metal finishing facility. The facility registered as a large quantity generator of spent halogenated solvents used in degreasing (F001) in 1980. In 1995 the facility changed its status to a conditionally exempt small quantity generator. No violations were found. The presence of a large quantity generator on the

Facility Name & Address	Databases	Comments
		Subject Property for an apparent 15-year period is evidence of a REC.
Chemical/ Stuarts Industrial Coatings/ Stuart Chemical and Paint Inc. 11740 Front Street	UST, LUST, RCRA-SQG, FINDS, ECHO, AIRS, BOL	This facility was mapped by EDR at several locations under different listings but is believed to be the same single facility. This facility was listed in the UST database with a history of seven tanks. Six 1,000-gallon tanks and one 3,000-gallon tank. A review of the OSFM's online UST database identified that the USTs were removed in January of 1990, and were reported to contain the following substances: • Toluene (CAS# 108-88-3) • Xylenes (CAS# 1330-20-7) • Stoddard Solvent/naphtha (CAS# 64742-88-7) • Light aliphatic solvent naphtha (CAS# 64742-89-8) • Ethyl acetate (CAS# 141-78-6) • Methyl isobutyl ketone (CAS# 108-10-1) • Methyl ethyl ketone (CAS# 78-93-3) The facility was listed in the LUST database with a history of a release for a non-petroleum product on January 5 ,1990. A review of the IEPA document explorer database indicates that the LUST incident is unresolved and that the IEPA's review of investigations undertaken at the time requested further information about the incident. The facility registered as a RCRA-SQG in 1991 as a generator of ignitable wastes (D001) and spent halogenated solvents (F003 and F005). No violations were reported with the listing. Based on the apparent status of the LUST incident in connection with the removal of seven USTs from the

Facility Name & Address	Databases	Comments
		facility, this listing is evidence of a REC in connection with the Subject Property.
Illinois Central Track 119th Street	BOL	This facility was listed in the BOL database. A review of the provided database information and the IEPA's BOL online database identified that the facility was listed in the states solid waste program in 1986. Based on the historical use of this facility as a railroad and for railroad operation, this listing is considered evidence of a REC.
All American Recycling/ Keywell Corp/ S.G. Keywell Co. 11900 S. Cottage Grove Ave	RCRA-NonGen/NLR, ICIS, US AIRS, FINDS, NY Manifest, UST, LUST, SPILLS	This facility was mapped by EDR as being adjacent to the Subject Property but was observed to be a scrap yard with portions located on the Subject Property during the site reconnaissance. The facility was listed in the ICIS database for a formal enforcement action for penalty in 2010. The enforcement action reportedly related to Toxic Release Inventory (TRI) reporting under the Emergency Planning and Community Right-to-Know Act (EPCRA). A review of the EPA's online ECHO database did not identify further records relating to this enforcement action. The facility was listed in the UST database with a history of two 2,000-gallon gasoline USTs reported as removed in 1990. The facility was also listed in the LUST database with a history of a gasoline release reported in 1990 and a diesel release reporting in 1994. A review of the IEPA's online LUST database identified that an NFR letter is recorded on January 24, 1996 for the 1990 gasoline LUST incident with no note requirements for engineered barriers or institutional controls. Records indicate that a non-LUST determination letter was issued by the IEPA in 1994 for the diesel release. The facility was also listed in the SPILLS database for a spill non-LUST incident occurring on July 9, 2004.

Facility Name & Address	Databases	Comments
		The facility was listed in the RCRA database as a Conditionally Exempt Small Quantity Generator in 1996 and Large Quantity Generator in 1992 of ignitable waste (D001) and corrosive waste (D002). The facility reportedly changed its status to non-generator in 2018. No violations were identified in connection with the RCRA listing. The history of enforcement action for penalty at this facility, the facilities former status as a Large Quantity Generator of ignitable (D001) and corrosive (D002) hazardous wastes, and the apparent presence of unremedied releases of diesel fuel, is evidence of a REC in connection with the Subject Property.
Penn Central Corp./ Lake Calumet Quad 810 E. 124th Street	Illinois States Sites Unit (SSU), CERCLIS	This facility was listed in the SSU and CERCLIS databases. The SSU database listed this facility with ID number 0316490002. A review of the IEPA document explorer database identified four documents totaling seven pages. The four documents indicate that a slurry wall was proposed in the late 1980's to be used at the facility to control the movement of contaminants. The documents also indicate that almost $170,000 of funds were requested in 2004 to allow for Patrick Engineering, Inc. to conduct a site investigation. This facility was also identified on a map in a US Scrap documentation accessed through the IEPA's document explorer database, as well as in the *Hazardous Materials Technical Memorandum* (CWC Transit Group 2013.) The *Hazardous Materials Technical Memorandum* identified this facility as a hazardous waste dump site and that over 400,000 gallons of liquid waste were reportedly pumped from the basement of on-site grain silos.

Facility Name & Address	Databases	Comments
		Given the apparent proposed slurry wall, reported historic use of the facility as a hazardous waste dump site, and requested funding for a site investigation in 2004, this listing is considered a REC.
Elmer Larson, Inc./ K-Five Construction/ K Five Construction 12401 S. Cottage Grove Avenue/ 12500 S. Cottage Grove Avenue	Tier 2, BOL, Chicago Env, Integrated Compliance Information System (ICIS), FINDS, RCRA-NonGen/NLR, FINDS, ECHO, AIRS,	This facility was listed in the FINDS, ECHO, AIRS, Tier 2, BOL, Chicago Env, ICIS, and FINDS databases. A review of the databases identified that this facility was operated as an asphalt plant from at least 1987. A review of the provided BOL database information and the IEPA's BOL online database identified that the facility was listed in the states air permit program, and water permit program for an NPDES permit. The FINDS and AIRS listings identified the facility was issued air pollution control permits and was regulated for air emissions from at least 1987 through 2018, with reported emissions of various pollutants. A review of the ICIS database listing identified that the facility was issued an informal notice of violation related to air emissions. The Tier 2 database identified that the facility stored or used reportable quantities of the following hazardous chemicals in 2010 and 2014: fuel oil, oil black, asphalt cements, emulsion 212, fatty acids, tall oil, polymers with glycerol, maleic anhydride, phthalic anhydride, and soybean oil. The Chicago Env database listings for this facility identified records relating to complaints, inspections, and permits. A review of CDPH's online databases identified a history of five permits having been issued to the facility, four air permits and one waste handling permit, which appeared to relate to the operation of the facility as an asphalt plant. A review of the

Facility Name & Address	Databases	Comments
		CDPH's online databases identified a history of 168 inspections conducted by City staff between 1998 and 2018. A brief review of the inspections note that the facility was used as an asphalt plant, which contained a rock crusher to breakup asphalt and concrete materials for reuse; the presence of berms as part of containment systems for ASTs and an outdoor drum storage area; reported occurrences of fly dumping at or near the facility; and the reported presence of one 1,000-gallon diesel AST, one 8,000-gallon prime sealer AST, two 20,000 gallon used oil ASTs, one 14,000-gallon used oil AST, one 20,000-gallon AST identified as containing "asphalt/cement", and one 2,000-gallon AST containing "Anti-Stripper". A review of the CDPH's online databases identified a history of five complaints between 1993 and 2003 reportedly related to checks for ordinance violations, odors, possible USTs, and use of a crusher at the facility. The facility was listed in the RCRA database. The listing identified that the facility registered as a non-generator in 1986. No violations were reported in connection with the listing. The reported use of this facility as an asphalt plant with records of at least seven ASTs of various size (that contained diesel fuel, used oil, and other products), as well as the reported use or storage various hazardous substances (fuel oil, oil black, asphalt cements, emulsion 212, fatty acids, tall oil, polymers with glycerol, maleic anhydride, phthalic anhydride, and soybean oil) in volumes sufficient to require Tier II reporting is evidence of a REC.

7.2.2 Surrounding Property

A number of listings were identified within the databases searched by EDR and reported in the EDR Area/Corridor Report. Those listings that are adjacent to the Subject Property, or which in EDI's opinion warranted further evaluation, are summarized below. EDI considered the remaining listings unlikely to impact the Subject Property based upon factors including, but not limited to:

- The nature of the listing
- The use of the facility represented by the listing
- The status of the facility reported in the listing
- The development density of the setting
- The distances between the listing and the Subject Property
- The likelihood of releases or spills migrating to the Subject Property based on soil types at the Subject Property, local topography, subsurface conditions, or inferred groundwater movement
- The presence of intervening drainage divides

Table 7-2: Adjoining Property Database Summary

Facility Name & Address	Direction & Distance	Databases	Comments
Adjoining Properties – 95th Street station to 103rd Street station			
Arco Am-Pm 12/ Atlantic Richfield C 1 E. 95th Street	Northeast 265-feet	UST, EDR Hist Auto	This facility was listed in the EDR Hist Auto database as a gasoline service station from 1989 to 1993. The facility was also listed in the UST database with a history of a 550-gallon used oil UST that was removed in 1986. By address, EDR maps this facility as being on the south side of 95th Street. However, historical sources during this time do not depict a gas station at this location. These records are believed to relate to a gas station at 4 E. 95th Street that is discussed below.
Shell Oil/ Mobile Gas &	Northeast	UST, LUST, EDR Hist Auto	This facility was listed in the EDR Historic Auto database as a gasoline service station

Facility Name & Address	Direction & Distance	Databases	Comments
Food Mart/ Sims Arco 4 E. 95th Street	351-feet		from 1981 to 2014. The facility was listed in the LUST database for a gasoline LUST incident on October 29, 1987. The incident was apparently later determined to be a non-LUST in 1996. The facility was also listed in the UST database with a history of a 12,000-gallon gasoline, 8,000-gallon gasoline, and 6,000-gallon diesel USTs that were last reportedly used in 2018. During the site reconnaissance, this facility no longer appeared to be in active use as a gas station. No corresponding records indicating the USTs were removed were identified from the obtained documents. Therefore, given the historical use of this facility as a gas station, the possibility that tanks remain in the ground at this location, and the historical release of gasoline, is evidence of a REC in connection with the Subject Property.
Amoco 15459/ SS #15459/ Whalen Standard Services 36 W. 95th Street	Northwest 367-feet	EDR Hist Auto, RCRA-NonGen/NLR, FINDS, ECHO, LUST	The facility was listed in the EDR Hist Auto database as a gasoline service station from 1969 to 1994. The facility was identified with a history of three 10,000-gallon gasoline USTs that were reportedly removed in 1997. A gasoline LUST incident occurred on June 24, 1997 and an NFR letter was recorded on July 17, 2003. A review of the IEPA's LUST database and online document explorer identified that the NFR letter included requirements for a highway authority agreement which extended partly into 95th Street and Lafayette Avenue. Based on the presence of a NFR letter, this listing is considered evidence of a CREC.
Abbott Park Fieldhouse	Northeast 593-feet	LUST, BOL, Chicago Env	The facility was listed in the LUST database for an 8,800-gallon heating oil UST removed on August 12, 1993. A 20-day report was

Facility Name & Address	Direction & Distance	Databases	Comments
45 E. 95th Street			filed in 1993 as well. A review of the IEPA's LUST database identified that a pre-1974 letter was filed with the IEPA in 2007. Therefore, the release was exempt from the LUST regulations. The facility was also identified in the Chicago Env database for a closed UST removal permit issued on July 23, 1993 and a closed air pollution control permit on July 7, 2003. Due to contamination from the LUST incident being allowed to remain in place and no remedial action being required, the historical presence of a UST and LUST incident is evidence of a REC.
ComEh Jonathan 337 W. 102nd Place	East 329-feet	EDR Hist Cleaners	The facility was listed in the EDR Hist Cleaners database as a garment pressing business from 2002 to 2005. A review of the Cook County Assessor's website identified this address as a single-family home. Based on this information, this listing is unlikely to have conducted dry cleaning operations on the premise. Therefore, this listing is not evidence of a REC.
City of Chicago/ Roseland Pumping Station 351 West 104th Street	East 220-feet	UST, LUST	This facility was listed in the UST database with a record of a 550-gallon diesel UST that was removed in 1994. A corresponding LUST incident was report in 1994 with a NFR letter issued in September 1995. A review of the IEPA's online LUST database did not note any requirements for engineered barriers or institutional controls. Given the reported product, and lack of required controls, this listing is not considered evidence of a REC.

Facility Name & Address	Direction & Distance	Databases	Comments
Adjoining Properties – 103rd Street station to 111th Street station			
New Langston Hughes 10320 S. Wentworth Avenue	East 1,002-feet	SRP, Eng Controls, Inst Controls	This facility was listed in the SRP, Eng Controls, and Inst Controls databases. Based on a review of IEPA's document explorer database, this facility was issued a comprehensive NFR letter in 2009 which noted that land use was restricted to commercial or industrial purposes, a requirement for three-foot clean fill engineered barriers, and a construction worker caution. From IEPA records, PNA's were identified as the primary contaminants of concern. Given the reported contaminants of concern and distance, this listing is not considered to represent a REC.
400 W. 108th Street	West 75-feet	AST, Chicago Env	The facility was listed in the AST database for a tank installed as part of a backup generator. According to the Chicago Environment database, a 210-gallon diesel tank was installed April 20, 2018. A Verizon wireless antenna was mounted on the property. Due to the lack of a reported leak or release in connection with this AST, this is not a REC.
Fizer S Fencing & Security 330 W. 111th Street	East 180-feet	EDR Hist Cleaners	The facility was listed in the EDR Hist Cleaners database as a carpet and rug cleaner in 2003. Based on the reported name of the business implying fencing and security services, this listing is not considered evidence of a REC.
Pentecostal Temple, Roseland Service Station	West 352-feet	LUST, EDR Hist Auto	This facility was listed in the EDR Hist Auto database as a gasoline and oil service station from 1923 to 1928.

Facility Name & Address	Direction & Distance	Databases	Comments
415-419 W. 111th Street			The facility was listed in the LUST database for a used oil LUST incident on August 8, 1991, and a gasoline LUST incident on November 22, 1991. A review of the IEPA's document explorer website identified a letter from 2009 which essentially noted that the IEPA does not consider the LUST incident resolved. The reported presence of an open unresolved LUST incident at the facility is evidence of a REC.
Roseland Tune Up Center 401 W. 111th Street	West 125-feet	EDR Historical Automotive (EDR Hist Auto)	This facility was mapped by EDR as being on the Subject Property. However, observations during the site reconnaissance place this facility approximately 125-feet to the west of the Subject Property. This facility was listed in the EDR Hist Auto database. The EDR Hist Auto database is a proprietary database created by EDR from a review of select city directory listings. The database was reportedly created by reviewing city directory listings for possible gas station, filling station, or service station establishments. The categories of facilities reviewed and noted by EDR in creating the database reportedly included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. Therefore, facilities identified by this database may not have actually conducted automotive related operations on the premise. The listing identified that Roseland Tune Up was present in city directory listings from 1982 to 2014. Observations from the site

Facility Name & Address	Direction & Distance	Databases	Comments
			reconnaissance indicate the continued presence of an automotive repair facility with a three-bay garage. Therefore, this listing is evidence of a REC.
Reiter Brothers 433 W. 111th Street	West 516-feet	EDR Hist Auto	The facility was listed in the EDR Historic Auto database as a gasoline and oil service station in 1928 to 1970. The historical presence of an auto service station for approximately 40 years is evidence of a REC.
Adjoining Properties – 111th Street station to Michigan Avenue station			
Sheldon Heights Service 332 W. 113th Street	West-Southwest 199-feet	EDR Historic Auto	The facility was listed in the EDR Historic Auto database as a gasoline station from 1969 to 1973. This listing is evidence of a REC in connection with the Subject Property.
Illinois Bell Telephone/ Pullman Company 65 West 113th Place	Northeast 665-feet	RCRA-NonGen/NLR, FINDS, ECHO, LUST, UST, IL TIER 2	The facility was listed in the UST database with a record of three USTs, two of which were listed as removed. A LUST incident was reported in 1990 for a release of diesel fuel. An NFR letter was recorded on May 4, 2004. The facility registered as a Small Quantity Generator of an ignitable waste (D001), corrosive waste (D002), and lead (D008). No violations were reported. The facility was listed in the Tier II database for storing diesel fuel, lead, and sulfuric acid on site. Based on the above information, this listing is not considered evidence of a REC.
Vacant Building 11321 S. Wentworth Avenue	Northeast 420-feet	UST	The facility was listed in the UST database with a history of a 1,000-gallon and 2,000-gallon, heating oil UST removed in 1997. Based on the distance, this listing is not considered evidence of a REC.
3 W. 114th Street	Northeast 681-feet	Brownfields, FINDS	This facility was listed in the Brownfields database. The Brownfields listing identifies that a Phase I ESA was completed for the facility in 2011 using grant funds for

Facility Name & Address	Direction & Distance	Databases	Comments
			suspected petroleum sites. The database listing identifies that the site in 2011 was a vacant corner lot and a suspect abandoned service station. In 1998, the City of Chicago demolished the structures on the property. Given the reported use of the facility and distance from the Subject Property, this listing is not considered evidence of a REC.
Marquette Bank/ Vacant Building 135-39 W. 114th Street/ 133-137 W. 114th Street	Northeast 81-feet	UST, LUST	The facility was listed in the UST database with a history of a 2,000-gallon gasoline UST removed on September 28, 2001. The facility was listed in the LUST database for a gasoline LUST incident on October 3, 2001. An NFR letter was recorded January 25, 2002. A review of the IEPA's document explorer database did not identify any engineering or institutional controls in connection with the NRF letter. Due to the status of this listing, this is considered evidence of a HREC in connection with the Subject Property.
SRM Motors 11429 S. Perry Avenue	East 70-feet	EDR Hist Auto	The facility was listed in the EDR Hist Auto database as an automobile repair and service shop in 2003. This listing is evidence of a REC.
Abandoned Service/ City of Chicago/ Satriano Texaco Service 11500 S. Perry	Southwest 204-feet	UST, LUST, Brownfields, FINDS, EDR Hist Auto	This facility was listed in the UST, LUST, EDR Hist Auto, and Brownfields databases. This facility was a gasoline service station in city directory records from 1973 to 1993. One 6,000-gallon gasoline, two 5,000-gallon gasoline, and one 1,000-gallon used oil tanks were identified as having been removed in 2000 with a corresponding release of gasoline and used oil being reported.

Facility Name & Address	Direction & Distance	Databases	Comments
			The Brownfields listing identifies that a Phase I ESA was completed for the facility in 2011 using grant funds. According to the Brownfields listing, the property is currently vacant and is an abandoned service station. An approximately 60-foot by 25-foot concrete pad remains on the site. The listing further identifies that soil was reportedly impacted and that cleanup was identified as being needed. The reported presence of an open unresolved LUST incident for the facility is evidence of a REC.
D&D Service Station 202 W. 115th Street	Southwest 500-feet	EDR Hist Auto	The facility was listed in the EDR Historic Auto database as a gasoline station from 1970 to 1973. Based on the distance, this listing is not considered evidence of a REC.
Petri Konstantin 113 W. 115th Street	Southwest 265-feet	EDR Hist Cleaners	The facility was listed in the EDR Historic Cleaner database as a garments, curtains, and draperies cleaners in 1928. Given the era in which this facility operated and the identification of this facility in a single year of records, this listing is not considered evidence of a REC.
Abandoned Gas Station/ Cox Donna 2 W. 115th Street	Northwest 160-feet	LUST, UST, RCRA-NonGen/NLR, FINDS, ECHO	This facility is identified in the UST database with a record of one 4,000-galllon and one 3,000-gallon gasoline USTs, both of which are reported as removed. Two gasoline LUST incidents were reported, one in 1998, and a second in 2011. A review of the IEPAs LUST database identified that pre-1974 letters were filed with the IEPA for both incidents. Therefore, the release was exempt from the LUST regulations. The reported presence of two gasoline LUST incidents that are not

Facility Name & Address	Direction & Distance	Databases	Comments
			remediated near the Subject Property is evidence of a REC.
11501 S. State Street	Northeast 225-feet	Chicago Env	This facility was mapped by EDR as being on the Subject Property. However, based on the provided address and historical Sanborn maps, this facility is located approximately 225 northeast of the Subject Property. This facility was listed in the Chicago Env database for records relating to inspections and NESHAPS notification. A review of the CDPH's online databases identified that a notice of intent for demolition or renovation that would disturb asbestos containing materials was recorded in 2008. Subsequent inspections by city staff occurred which note the demolition. Based on the above information this listing is not considered evidence of a REC.
Charter Bus Company 11575 S. Wabash Avenue	Southwest 100-feet	Chicago Env	This facility was mapped by EDR as being on the Subject Property. However, a review of County records indicates this facility is actually located approximately 100-feet southwest of the Subject Property. This address was listed in the Chicago Env database for records relating to inspections. A review of the CDPH's online databases identified that an inspection was conducted on October 6, 2004 by city staff. The inspectors reported to observed evidence of the illegal dumping of liquid wastes into the city stormwater sewer system. The inspector's narrative noted that the lead investigator from the Department of Streets and Sanitation stated that he would take no further action until instructed to do so by management of his department at which time

Facility Name & Address	Direction & Distance	Databases	Comments
			the CDPH inspector would also take further action. A review of CDPH's online records did not identify a corresponding record of enforcement action or complaints. Based on the above information this listing is considered evidence of a REC.
Roseland Gasoline St 11420 S. Michigan Avenue	North 418-feet	EDR Hist Auto	The facility was listed in the EDR Historic Auto database as a gasoline station in 1923 and 1928. Based on the distance, this listing is not considered evidence of a REC.
Tadros Musa/ Goodyear Auto Service 11442 S. Michigan Avenue	North 203-feet	LUST, RCRA-NonGen/NLR, FINDS, ECHO	This facility was listed in the UST and LUST databases. One 500-gallon used oil tank was reported as removed in 1996. A corresponding LUST incident was reported and was issued a NFR letter in 1998. A review of the IEPAs online LUST database did not identify any requirements for engineered barriers or institutional controls. The facility was identified in the RCRA database as a small quantity generator of waste oils (X001), and an ignitable waste (D001). No violations are recorded. Due to the status of this listing, this is considered evidence of a HREC in connection with the Subject Property.
Ray S Cleaners 11501 S. Michigan	East 70-feet	EDR Hist Cleaners	The facility was listed in the EDR Historic Cleaners database as a cleaners in 1981. Given the identification of this facility in a single year of records, this listing is not considered evidence of a REC.
Montana Jigamian	Northeast 225-feet	EDR Hist Cleaners	This facility was mapped by EDR as being on the Subject Property. However, based on the provided address and historical Sanborn maps, this facility was actually located

Facility Name & Address	Direction & Distance	Databases	Comments
11503 S. Michigan Avenue			approximately 225-feet northeast of the Subject Property. This facility was listed in the Hist Cleaners database and identified as a cleaner of garments, curtains, and draperies in city directory records from 1928. Given the era in which this facility operated and the identification of this facility in a single year of records, this listing is not considered evidence of a REC.
Irvings Standard 11533 S. Michigan Avenue	East 75-feet	EDR Hist Auto	The facility was listed in the EDR Hist Auto database as a gasoline service station from 1996 to 2000. This listing is believed to relate to the listing for Clark Service Station/ Bob's Super 100/ Clark Oil and Refining at 11555 S. Michigan Avenue that was reviewed previously.
Wah Louis 11535 S. Michigan Avenue	East 76-feet	EDR Hist Cleaners	The facility was listed in the EDR Hist Cleaners database as a "chinese laundry" in 1923. Given the era in which this facility operated, the identification of this facility and a single year of records, this listing is not considered evidence of a REC.
Gorgodian Samuel 11453 S. Michigan Avenue	North 268-feet	EDR Hist Cleaners	The facility was listed in the Hist Cleaners as a hat cleaner in 1923. Given the era in which this facility operated and the identification of this facility in a single year of records, this listing is not considered evidence of a REC.
Haney Khalil, Michigan Citgo/ Martin oil Service	Southeast 281-feet	UST, LUST, SPILLS, EDR Hist Auto, Chicago Env	The facility was listed in the EDR Hist Auto database from 1970 to 2014 as a gasoline station under various names. The facility was also observed to be active during the site reconnaissance. The facility was listed in the UST database with a history of a 12,000-

Facility Name & Address	Direction & Distance	Databases	Comments
11600 S. Michigan Avenue			gallon gasoline, 15,000-gallon gasoline, 12,000–gallon gasoline USTs listed as currently in use. The UST database also noted a 6,000-gallon kerosene UST that was reported as abandoned in place in 2017. The SPILL and LUST listings identified a release reported on April 4, 2017. The SPILL listing identified the release as kerosine while the LUST listing identified the material as heating oil. A review of the IEPA's online LUST and document explorer database identifies that a release of kerosine occurred from a 6,000-gallon tank. The kerosine tank was red-tagged by the OSFM in 2015 and the tank was required to be removed or abandoned. 20 and 45-Day Reports were filed with the IEPA, but the 45-Day Report was denied as early action sampling was not done in accordance with regulations. Based on the above information, the operation of a gas station at this facility from least 1970, with four USTs that remain in place, and an unresolved release of kerosine is evidence of a REC in connection with the Subject Property.
Clothes Mate Dry Cleaners 11625 S. Michigan Avenue	Southeast 339-feet	EDR Hist Cleaners	The facility was listed in the Hist Cleaners database as a garment pressing and cleaners from 1997 to 1999. Based on the distance of the listing, the identification of this facility in three years of records, and corresponding lack of additional record sources for this facility, this listing is not considered evidence of a REC.
Curtis School	Northeast	UST, Tanks, BOL, RCRA-	This facility was mapped by EDR as being on the Subject Property. However, this facility is

Facility Name & Address	Direction & Distance	Databases	Comments
32 E. 115th Street	200 feet	VSQG, Chicago Env, FINDS, ECHO, AIRS	actually located approximately 200-feet northeast of the Subject Property at the northeast corner of 115th Street and State Street. The facility was listed in the UST and Tanks databases with a history of one 5,000-gallon heating oil tank that was reportedly removed in April 2001. A review of the OSFM's online UST database for the facility did not note a LUST incident in connection with the UST. The facility registered as a small quantity generator in 1998 and generated hazardous waste under codes cadmium (D006), lead (D008), and mercury (D009). No record of violations was reported in connection with the RCRA listing. The facility was listed in the Chicago Env database for records relating to complaints, inspections, permits, tanks, and NESHAPS notification. A review of the CDPH's online databases identified a history of two complaints. A complaint filed on September 21, 1995 identified a record of apparent spray-painting causing fumes that in turn caused sore throats and headaches in teachers and students. The second complaint related to asbestos removal from the school. A review of permits identified records of a permit to remove the above noted 5,000-gallon tank, as well as series of permits to install furnace equipment and clean the exterior of the building.

Facility Name & Address	Direction & Distance	Databases	Comments
			Given the above information, and distance from the Subject Property, this listing is not evidence of a REC.
Dumac Garage 131 E. 115th Street	East 353-feet	EDR Hist Auto	The facility was listed in the EDR Historic Auto database as an auto garage, auto repairing shop, and towing services from 1923 to 2005. Based on the distance, downgradient location, and lack of reported release, this listing is not considered evidence of a REC.
Calumet Coach Co 135 E. 115th Street	East 387-feet	RCRA Non-Gen/NLR, FINDS, ECHO	The facility registered as a generator of hazardous waste in 1986 under waste codes: ignitable waste (D001), spent halogenated solvents (F002), spent nonhalogenated solvents (F003), and spent halogenated solvents (F005). No violations were identified. Based on the distance and lack of violations, this listing is not considered evidence of a REC.
Tony's Autobody 157 E. Kensington	Northeast 458-feet	RCRA-VSQC, FINDS	The facility registered as a VSQC of an ignitable waste (D001) and spent nonhalogenated solvents (F003 and F005). No violations were found. Based on the above information, this listing is not considered evidence of a REC.
Adjoining Properties – Michigan Avenue station to 130th Street station			
US Scrap/ U.S. Scrap/ U.S. Drum Disposal Co. 391 E. Kensington/ 123rd and Cottage Grove Avenue	Southwest 100-feet	Superfund Enterprise Management System (SEMS), Superfund Consent Decrees (Consent), Potentially Responsible	This facility was listed in numerous databases under several variant names and was mapped by EDR at several locations. However, based on available documentation, this facility is reportedly located approximately 100-feet from the Subject Property. The SEMS listing identified that the facility is not currently listed as a National Priorities List (NPL) site for the USEPA's Superfund

Facility Name & Address	Direction & Distance	Databases	Comments
		Party (PRP), SSU, SWF/LF, BOL, RCRA-NonGen/NLR, ICIS, FINDS, ECHO, Surface impoundments (IMPDMENT)	Program. However, the site was investigated by the USEPA for possible inclusion in the NPL starting in 1980. The Consent, ICIS, ECHO, and FINDS databases identify that the facility underwent several rounds of formal enforcement action with the USEPA starting in 1989 through at least 2013. With several actions referred to the courts. The facility reportedly entered into a court ordered consent decree in 2011. A review of the Civil Enforcement Case Report available through the USEPA's ECHO website provided a case summary, which identified that the facility reportedly operated as an industrial chemical waste receiver from 1965 to 1975. From 1973 to 1975 the operator of the facility reportedly disposed of wastes at the facility and a related site. A landfill fire was reported at the facility in 1985, after which the USEPA conducted emergency response action which reportedly involved excavating and removing "heavily contaminated soils" and drummed wastes from a railroad embankment on the facility. The response action reportedly only addressed a portion of the known buried wastes. A review of the IEPA's document explorer database identified a history of proposed investigations of the facility from 2004, which included maps depicting the apparent location of the facility. A letter from the IEPA dated June 2005 to the USEPA requested a time-critical removal assessment be conducted at the facility as soil, water, and

Facility Name & Address	Direction & Distance	Databases	Comments
			sediment samples reportedly still contained “high levels of pesticides and SVOC contamination.” The facility was listed in the IMPDMENT database, a record of surface impoundments created in 1980 by the IEPA as part of an assessment of potential contamination of shallow aquifers in the state. According to the database, the purpose for the impoundment is waste storage. Also, according to the database, there was no bottom of liner. Based on the reported historical use of the facility, landfilling and burial of chemical related wastes, and the presence of SVOC and pesticide contamination remaining at the site in the mid 2000’s, this facility is a REC.
Sherwin Williams Co. 11541 S. Champaign	Northeast 1,989-feet	CORRACTS, RCRA-TSDF, RCRA-LQG, LUST, SEMS, ECHO	The facility was listed in the CORRACTS database with a history of paint and coating manufacturing from 1989 to 2019. In 1994 a high corrective action priority was assigned. The facility was listed in the RCRA database as a TSD facility and Large Quantity Generator. The RCRA database listings identified a history of numerous wastes related to paint and coating production. The facility received several violations in the areas of records and reporting, final civil judicial action for compliance and/or monetary penalty, generators pre-transport, general, groundwater monitoring, financial requirements, permit application, container use and management, LDR general, contingency plan and emergency procedures, tank system standards, federal

Facility Name & Address	Direction & Distance	Databases	Comments
			or state statute, and closure/post closure. Institutional controls were established in 2012. Performance standards were attained with required controls in 2014. Remedy construction is planned in 2020. Due to the active use of this facility for manufacturing, historic landfilling activities, and ongoing and planned remediation, this facility is considered evidence of a REC.
Bulkoa Inc./ Clean Harbors Env. Services/ Schneider Tank Lines/ Vacuum Industrial Pollution Intl/ Smith Systems Chicago Yard/ Unloading Unlimited/ Allwaste Tank Cleaning 11861 - 11901 S. Cottage Grove Avenue.	Northeast 520-feet	LUST, UST, RCRA-Nongen/NLR, RCRA-SQG, FINDS, ECHO	The facility was listed in the UST database with a history of seven USTs that were reportedly removed in December 1997. A review of the OSFM's online UST database identified that one of the tanks reportedly contained gasoline, three reportedly contained diesel fuel, and three did not have a product reported. A LUST incident was reported in 1997 for a release of diesel and gasoline. A review of the IEPA's online LUST database identified that an NFR letter issued in 2003 for the release required institutional controls consisting of reliance of a groundwater ordinance and restricting use of the property to industrial or commercial purposes. A review of the IEPA document explorer database identified that a Soil Vapor Extraction system was installed in 2001 at the facility to address the contamination from the release and was operated for a period of about 2 years. The facility was also listed under several different RCRA listings as a generator of hazardous waste, some with unique generator identification numbers but the

Facility Name & Address	Direction & Distance	Databases	Comments
			same overall address. Due to the overlapping RCRA listings, the exact status and history could not be readily determined. The facility apparently was mostly a small quantity generator of hazardous wastes, but records identified Allwaste Tank Cleaning as a historic large quantity generator. Reported waste streams included: ignitable (D001), corrosive (D002), reactive (D003), spent solvents (F001, F002, F003), electroplating wastes (F006, F007), quenching oil bath residues (F010), quenching wastewater treatment sludges (F012), K-listed wastes (K001, K009, K010, K015, K016, K018, K019, K020, K021, K022, K023, K024, K027, K028, K030, K048, K049), and U-listed wastes (U019, U055, U134, U140, U220, and U238). Given the reported history of this facility as an apparent generator of hazardous waste under a large variety of waste codes, this history of a gasoline and diesel fuel release with contamination allowed to remain in place subject to institutional controls, this facility is evidence of a REC.
Allwaste Tank Cleaning 11901 S. Cottage Grove Ave	Northeast 214-feet	RCRA Non-Gen/NLR, FINDS, ECHO	The facility was listed in the RCRA Non-Generator database as a former Large Quantity Generator of spent nonhalogenated solvents (F003). The facility originally registered as a large quantity generator in 1981. The facility changed is status to non-generator in 2006. The facility received three violations for pre-transport regulations. The violations received compliance by 1991. The presence of a former large quantity generator of solvent wastes with violations is evidence

Facility Name & Address	Direction & Distance	Databases	Comments
			of a REC in connection with the Subject Property.
Lake Calumet Smelting/ Inland Metals Refinery Company Incorporation 651 E. 119th Street/ 11901 S. Champlain Avenue	Northeast 500-feet	SWF/LF, NIPC, UST, BOL, SEMS, CORRACTS, SSU, RCRA-NonGen/NLR, ICIS, LEAD SMELTERS, FINDS, ECHO	This facility was mapped by EDR at several locations under different listings but is believed to be the same single facility. A review of the IEPA document explorer database identified two documents from the State Site Unit written to the agency's file. These documents identify that this facility was operated by Lake Calumet Smelting from 1948 until the 1970's, and then by Inland Metals until 1989. These documents identify the facility at the noted addresses, Maps and written descriptions provided with the documents indicate this facility was approximately 500-feet northeast of the Subject Property, and not the 1,000 or more feet reported by EDR. These documents also note the confirmed presence of soil and groundwater impacts at the facility through sampling conducted in the 1990's. The SEMS listing identified that the facility is not currently listed as a NPL site for the USEPA's Superfund Program. However, the facility was evaluated for possible inclusion in the NPL in the 1980's. The SEMS and CORRATS listings identify that the facility was assigned a medium corrective action priority in 1991 and was then archived. The SEMS listing for Lake Calumet Smelting identified that the facility was apparently again evaluated for possible inclusion in the NPL in the early 2000's but was referred for removal in late 2013. Lake Calumet Smelting

Facility Name & Address	Direction & Distance	Databases	Comments
			was listed in the ICIS database for an apparent court ordered warrant to access the property in May 2013. A review of the EPAs online ECHO database Civil Enforcement Case Report did not identify additional information. The facility was listed in the SWF/LF database as unpermitted and unauthorized solid waste disposal facility with a surface impoundment. The facility was listed in the RCRA database as a generator of hazardous waste containing lead (D008) and emission control dust/sludge from secondary lead smelting (K069). The RCRA listings identify that the facility received numerous violations in the late 1980's related to the operation of the site as a Transportation, Storage, Disposal (TSD) facility. These violations apparently achieved compliance in 1993. Based on the reported presence of soil and groundwater contamination at the facility in the 1990's, the historic operation of this facility as a smelters, and the numerous RCRA violations reported in the 1980's, this facility is evidence of a REC in connection with the Subject Property.
Cottage Grove Dump (No Address)	Northeast 173-feet	SWF/LF	The facility was listed in the SWF/LF database as a historical landfill owned by the City of Chicago and operated by the Department of Street and Sanitation. The location of the landfill was apparently reported using township and range information, so the exact location is unknown.

Facility Name & Address	Direction & Distance	Databases	Comments
			The reported presence of a landfill in the vicinity of the site is evidence of a REC.
Chicago MSD #3 (No Address)	Southwest 73-feet	IL SWF/LF	The facility was listed in the SWF/LF database as a closed landfill. The facility was also noted in the in the Hazardous Materials Technical Memorandum prepared by CWC Transit Group and dated August 2013. The Hazardous Materials Technical Memorandum identified this facility as an inactive landfill that was used for disposal of sand, gravel, and grit from sewage treatment by MWRD. Surface samples that were reportedly collected indicated the presence of PCBs, chloroform, chlordane, chromium, lead, toluene, and 4,4-dichlorodiphenyldichloroethane (DDD). As no reported removal or cleanup had occurred, the Hazardous Materials Technical Memorandum identified this site is a High Concern. Based on the above information, this facility is evidence of a REC.
Chicago Metro Sanitary/ Metropolitan Sanitation District Greater Chicago/ Chicago Metro Sanitary District #2, Chicago Metro Sanitary District #3, Chicago Metro Sanitary District #4 (No Address)	Southwest 200-feet	NIPC, IMPDMENT	This facility was mapped by EDR at several locations under different listings but is believed to be the same single facility that is generally located approximately 200-feet from the proposed permanent envelope. The facility was listed in the IMPDMENT database, a record of surface impoundments created in 1980 by the IEPA as part of an assessment of potential contamination of shallow aquifers in the state. According to the database, the facility type is municipal. The facility was listed multiple times in the NIPC database, a historical inventory of solid waste sites created originally in 1986. The

Facility Name & Address	Direction & Distance	Databases	Comments
			NIPC report recorded locations of possible landfills using township, range, and section information, so exact placement was not always assured. Based on the name and location, this facility is believed to be related to the Calumet Reclamation Plant observed during the site reconnaissance and relate to the Chicago MSD #3 facility noted above and described in the Hazardous Materials Technical Memorandum prepared by CWC Transit Group and dated August 2013. Due to the reported historic landfill activity at the facility, this is evidence of a REC in connection with the Subject Property.
Land & Lakes Transfer 1258-1300 E. 130th Street	Southwest 95-feet	RCRA-NonGen/NLR, FINDS, ECHO	The facility was listed in the RCRA Non-Generator database with a history as a Small Quantity Generator of an undefined waste (D000), selenium (D010), and benzene (D018). No violations are recorded. Due to the lack of violations, this is not a REC.
Calumet NU Earth/ Calumet NU-Earth Dis 130th and Doty Avenue	Northeast 192-feet	NIPC, SEMS	This facility was mapped by EDR at several locations under different listings but is believed to be the same single facility. The SEMS listing identified that the facility is not currently listed as a NPL site for the USEPA's Superfund Program. However, the site was investigated by the USEPA for possible inclusion in the NPL in 1984 and 1985. The facility was archived by the USEPA in 1991. The facility was listed in the NIPC database, a historical inventory of solid waste sites

Facility Name & Address	Direction & Distance	Databases	Comments
			created originally in 1986. The NIPC report recorded locations of possible landfills using township, range, and section information, so exact placement was not always assured. Due to the historic landfill activity at the facility, this is evidence of a REC in connection with the Subject Property.
City of Chicago 110 E 130th Place	Southwest 418-feet	RCRA-SQG	The facility was listed in the RCRA database as a Small Quantity Generator of an ignitable waste (D001). No violations were identified. Due to the status and distance of the listing, this listing is not considered evidence of a REC.
Altgeld Library 955 E. 131st Street	Southwest 1,462-feet	SRP	The facility was listed in the SRP database. A review of the IEPA's document explorer database for the facility identified that an NFR letter has not been issued for the facility. However, reports indicate that the facility was enrolled into the SRP to address PNA and metal soil contamination, and that contaminants were not expected to migrate off-site. Therefore, based on this information, this listing is not considered evidence of a REC.
Dolton Municipal Dolton, IL	Northeast 3,000-feet	IL NIPC	The facility was mapped by EDR within 500-feet of the Subject Property. However, the listing indicates this facility is in Dolton, IL, which is approximately 1/2 mile to the south, across the Calumet River. Given the distance from the Subject Property and intervening drainage divide, this listing is not considered evidence of a REC.

Section 8 - Vapor Encroachment Screening

8.1 Method

Vapor encroachment is an evolving concern associated with the potential for volatile chemicals (such as petroleum fuels and chlorinated solvents) to migrate into occupied structures through the gas phase. More specifically, the concern is the potential migration of volatile chemicals that have entered the gas phase into an occupied structure (thereby exposing the occupants of that structure to the chemical) from contaminated soil or contaminated groundwater that may be present at, or near, a given site.

As noted previously in this report, a VEC is the presence or likely presence of one or more volatile chemicals of concern (COCs) in the subsurface of the site caused by the release of vapors from contaminated soil or contaminated groundwater either on or near the Subject Property. As part of the Practice, the Environmental Professional is to evaluate the potential for the migration or encroachment of hazardous substances or petroleum products in the vapor phase within the subsurface. Based on the scope of services requested by the Client, Vapor Encroachment Conditions (VECs) were only evaluated for the locations of proposed buildings, stations, and electrical substations, as these locations will be developed with enclosed ground level or below ground occupied structures. While the method of the evaluation is not specified by the Practice, EDI completed a VES in general accordance with ASTM Standard E2600-15, Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions. The VES utilize information gathered as part of this Phase I ESA and no additional information was gathered.

If a VEC is identified or cannot be ruled out, the environmental professional must determine whether the VEC represents evidence of a REC in connection with the Subject Property within the context of this Phase I ESA. It should be noted that the identification of a VEC on the Subject Property does not necessarily indicate that a potential for migration of vapors into existing or proposed structures on the Subject Property is likely. The actual migration of vapors into a given structure are governed by a large variety of site-specific factors which is beyond the scope of this assessment to evaluate.

Default search distances for a VES in general accordance with ASTM Standard E2600-15 are listed in the table below by record source. Default search distances for petroleum related COCs are approximately 0.1 miles and the default search distance for other COCs are approximately 0.33 miles.

Table 8-1: VES Search Distances

Standard Environmental Record Sources	**Default Approximate Minimum Search Distance (Miles)**	
	COC	Petroleum Related COC
Federal		
NPL site list	1/3	1/10
CERCLIS list	1/3	1/10
RCRA CORRACTS facilities	1/3	1/10
RCRA non-CORRACTS TSD facilities	1/3	1/10
RCRA generators	Property Only	Property Only
Institutional or engineering control registries	Property Only	Property Only
ERNS list	Property Only	Property Only
State- and tribal-equivalents		
NPL	1/3	1/10
CERCLIS	1/3	1/10
Landfill and/or solid waste disposal site lists	1/3	1/10
Leaking storage tank lists	1/3	1/10
Registered storage tank lists	Property Only	Property Only
Institutional or engineering control registries	Property Only	Property Only
Voluntary cleanup sites	1/3	1/10
Brownfield sites	1/3	1/10

The search distances may be expanded or reduced in the upgradient, cross-gradient, or downgradient directions based on EDI’s professional judgment relating to factors such as groundwater flow direction, subsurface characteristics (such as low-permeability soil, such as soil high in clay or silt content), surficial features (such as wetlands, rivers or streams), and man-made features (such as utility corridors).

8.2 Results

Based on the available information, EDI identified the following site(s) of potential concern within the VES search distances established for the Subject Property. These sites are summarized below.

Table 8-2: VES Results Summary

Facility Name & Address	Direction, Distance, Gradient Position Relative to Subject Property	Represent a VEC?	Comment
103rd Street station and substation			
B Van Dir Meer & Sons 400 W. 104th Street	Subject Property	Yes	This facility was listed in the Tanks and Chicago Env databases. A review of the records provided by EDR identified work in 1956 to inspect three 20,000-gallon fuel oil tanks and remove unspecified existing tanks. The potential presence of these tanks on the Subject Property represents a VEC.
Illinois Bell Telephone/AT&T IL 413 W. 105th Street	Subject Property	Yes	This facility has a reported record of the installation of six USTs at and corresponding records of the removal of only four USTs. In addition, a LUST incident was reported and eventually issued an NFR letter in March of 2005, prior to the inclusion of the indoor inhalation route as a potential pathway in the IEPA's cleanup regulations. Furthermore, the NFR letter notes contamination was allowed to remain in place subject to the restrictions of the NFR letter. Therefore, the known contamination and USTs on the Subject Property represent a VEC.
Fred Syhora 401 W. 105th Street	Subject Property	Yes	This facility was listed in the Chicago Env and Tanks database for records of installation and subsequent abandonment of four USTs. In 1970, two 15,000-gallon USTs and two 4,000-gallon USTs were reportedly abandoned in place by filling with

Facility Name & Address	Direction, Distance, Gradient Position Relative to Subject Property	Represent a VEC?	Comment
			sand. The reported abandonment of four USTs on the Subject Property prior to modern UST regulations represent a VEC.
JCK Auto Depot Inc. 411 W. 105th Street	Subject Property	No	This facility was listed in the FINDS and IL BOL databases. A review of the provided database information and the IEPA's BOL online database identified that the facility was listed in the states solid waste program in 1984. Based on the lack of further records, history of permits, or violations associated with the facility, this listing is not considered to represent a VEC.
City of Chicago/ Roseland Pumping Station 351 W. 104th Street	East 220-feet Same	No	This facility was listed in the UST database with a record of a 550-gallon diesel UST that was removed in 1994. A corresponding LUST incident was report in 1994 with a NFR letter issued in September 1995. A review of the IEPA's online LUST database did not note any requirements for engineered barriers or institutional controls. Given the reported product, lack of required controls, distance, and typically clayey soils in the area of the Subject Property, this listing is not considered to represent a VEC.
Chicago Fire Department Engine #93	East 420-feet Same	No	This facility was listed in the UST database with a pre-1974 heating oil tank. Given the absence of a reported release, distance, and typically clayey soils in the area of

Facility Name & Address	Direction, Distance, Gradient Position Relative to Subject Property	Represent a VEC?	Comment
330 W. 104th Street			the Subject Property, this listing is not considered to represent a VEC.
New Langston Hughes Elementary School 10320 S. Wentworth Avenue	East 1,000-feet Same	No	This facility was listed in the SRP, Eng Controls, and Inst Controls databases. Based on a review of the document explorer database, this facility was issued a comprehensive NFR letter in 2009 which noted that land use was restricted to commercial or industrial purposes, a requirement for three-foot clean fill engineered barriers, and a construction worker caution. From IEPA records, PNA's were identified as the primary contaminants of concern. Given the reported contaminants of concern, distance, and typically clayey soils in the area of the Subject Property, this listing is not considered to represent a VEC.
111th Street station and substation			
William Ransom Transportation/ Ransom Transport/ Ransom Transport Bus Garage 352 W 110th Street	Subject Property	Yes	The facility was listed in the UST and Tanks database with a record of one 6,000-gallon gasoline UST that was reported as removed. CDPH online database records indicate the tank was installed in 1972. The facility was listed in the LUST and SPILLS database for a release of gasoline that was reported on February 19, 1999 and was assigned incident number 990399. A review of the IEPA's online LUST and document explorer databases

Facility Name & Address	Direction, Distance, Gradient Position Relative to Subject Property	Represent a VEC?	Comment
			identified that 20- and 45-day reports were submitted for the incident, but that no NFR letter has been issued, and that the IEPA does not appear to consider the issue resolved. Based on the 45-day report, the UST appears to have been located south adjacent to the existing building. The reported presence of an open unresolved LUST incident for a gasoline release at the facility is evidence of a VEC.
Pentecostal Temple, Roseland Service Station 415-419 W. 111th Street	West 352-feet Same	Yes	This facility was identified in records as a gasoline service station from approximately 1923 to 1928. The facility was listed in the LUST database for a used oil LUST incident on August 8, 1991, and a gasoline LUST incident on November 22, 1991. A review of IEPA records identified a letter from 2009 which essentially noted that the IEPA does not consider the LUST incident resolved. The reported presence of an open unresolved LUST incident at the facility is evidence of a VEC.
Lakefront Supporting Housing 11023-11045 S. Wentworth	East 1,309-feet Same	No	This facility was listed in the SRP, Eng Controls, and Inst Controls databases. The SRP database listing identified that the facility was issued a focused

Facility Name & Address	Direction, Distance, Gradient Position Relative to Subject Property	Represent a VEC?	Comment
			NFR letter in 2005. The NFR letter reportedly included requirements for engineered barriers, institutional controls, and a groundwater use restriction. A review of the IEPA document explorer database identified that the NFR was issued for contamination related to VOCs and lead only. According to the IEPA's Project Summary notes, soil impacts were limited to the facility, and groundwater impacts were only modeled to extend into the streets adjoining the facility. Therefore, based on the reported distance, modeled extent of impacts, and typically clayey soils in the area of the Subject Property, this listing is not considered to represent a VEC.
Michigan Avenue station and 116th Street substation			
Clark Service Station / Bobs Super 100 / Clark Oil and Refining 11555 S. Michigan Avenue	Subject Property	Yes	The facility was listed in the UST database with a history of two 6,000-gallon gasoline and one 7,500-gallon gasoline UST reportedly removed in 1991. The facility was identified in the EDR Historic Auto database as a gasoline service station from 1982 to 1992. A gasoline LUST incident occurred on September 5, 1991. An NFR letter was recorded January 9, 1995. A review of the IEPA's online LUST database did not identify any requirements for engineered barrier

Facility Name & Address	Direction, Distance, Gradient Position Relative to Subject Property	Represent a VEC?	Comment
			or institutional controls with the NFR letter. As the NFR letter was issued prior to the inclusion of the indoor inhalation route as a potential pathway in the IEPA's cleanup regulations the LUST incident represents a VEC.
Cuter Sefer Oil 11521 S. State Street	Subject Property	Yes	This facility was identified in the 1950 Sanborn map as a gas station with three UST. This facility was listed in the Tanks databases. The Tanks listing identified that one 1,000-gallon gas UST was reportedly replaced in 1955. The historical presence of a gas station with three USTs, that may remain in the ground is evidence of a VEC.
Flair Cleaners, Betty Bright Cleaners 11518 S. Michigan Avenue	Subject Property	Yes	This facility was listed in the Hist Cleaners database under several names from 1981 to 2003 and was noted as a dry cleaning plant. The facility registered as a CESQG of hazardous waste in 2000. Wastes generated were reported to consist of undefined wastes (D000), tetrachloroethylene (D039), trichloroethylene (D040), and various spent halogenated solvents (F002). No RCRA violations were noted in association with the listing.

Facility Name & Address	Direction, Distance, Gradient Position Relative to Subject Property	Represent a VEC?	Comment
			This facility was listed in the Chicago Env database for records relating to complaints and inspections. A review of CDPH's online databases identified that a complaint was filed in August 2004 that the facility was "dumping used chemical solution into the sewers throughout the area." CHPH records also identified a series of eight inspections of the facility by city staff that were conducted between August 2002 and March 2007. Six of these inspections appeared to be regular periodic inspections of the facility and did not report issues of concern. Two of the inspection were noted to be conducted in response to the above complaint. These inspections were conducted on August 3, 2004 and August 12, 2004 and did not report to find evidence of the illegal disposal of materials in the sewer behind the shop. Based on the above information, the historical presence of a dry cleaning plant on the Subject Property is evidence of a VEC.
Oak Park National Bank 11500 S. Michigan Avenue	Subject Property	Yes	This facility was listed in the Tanks database with two records. The first tank related record identified that 315-gallon USTs, one 1,000-gallon UST, one 2,000-gallon UST were reportedly installed in May of 1958.

Facility Name & Address	Direction, Distance, Gradient Position Relative to Subject Property	Represent a VEC?	Comment
			The second tank record indicates one 2,000-gallon UST and five 300-gallon USTs were reportedly installed in March of 1959. The reported historic presence of USTs being installed at the facility on the Subject Property, with no corresponding record of their removal, is evidence of a VEC.
Triangle Transmission 35 W. 115th Street	Subject Property	No	This facility was listed in the UST databases with record of two 1,000-gallon gasoline tanks that were reported as removed on October 13, 1999. An associated LUST incident was reported on October 13, 1999 and assigned incident number 992324. A review of the IEPA's online LUST and document explorer databases identified that a 20-day report was filed, but that no NFR letter has been issued, and that the IEPA does not appear to consider the issue resolved. While this facility is on the Subject Property, this facility is located over 600 feet from a proposed building, station, or electrical substation. Therefore, this listing is not considered evidence of a VEC based on the reported material released, distance, and typically clayey soils in the area of the Subject Property.

Facility Name & Address	Direction, Distance, Gradient Position Relative to Subject Property	Represent a VEC?	Comment
The Shedd Company 301 E. 117th Street	Subject Property	No	This facility was listed in the Tanks database. The Tanks listing identified that one 1,000-gallon gas tank was reportedly replaced in 1948, one 4,000-gallon fuel oil tank was reportedly installed in 1956, and one 6,000-gallon fuel oil tank was reportedly installed in 1957. While this facility is on the Subject Property, this facility is located over 500-feet from a proposed building, station, or electrical substation. Therefore, this listing is not considered evidence of a VEC based on the reported material held in the tanks, distance, and typically clayey soils in the area of the Subject Property.
Abandoned Gas Station, Cox Donna 2 W. 115th Street	North 160-feet Same	No	This facility is identified in the UST database with a record of one 4,000-galllon and one 3,000-gallon gasoline USTs, both of which are reported as removed. Two gasoline LUST incidents were reported, one in 1998, and a second in 2011. A review of the IEPAs LUST database identified that pre-1974 letters were filed with the IEPA for both incidents. Therefore, the release was exempt from the LUST regulations. While this facility is identified as approximately 160-feet from the Subject Property, this facility is located over 600-feet from a

Facility Name & Address	Direction, Distance, Gradient Position Relative to Subject Property	Represent a VEC?	Comment
			proposed building, station, or electrical substation. Therefore, this listing is not considered evidence of a VEC based on the reported material released, distance, and typically clayey soils in the area of the Subject Property.
Musa Tadros, Goodyear Tire and Rubber 11442 S. Michigan Avenue	North 203-feet Same	No	This facility was listed in the UST and LUST databases. One 500-gallon used oil tank was reported as removed in 1996. A corresponding LUST incident was reported and was issued a NFR letter in 1998. A review of the IEPAs online LUST database did not identify any requirements for engineered barriers or institutional controls. While this facility is identified as approximately 203-feet from the Subject Property, this facility is located over 600 feet from a proposed building, station, or electrical substation. Therefore, this listing is not considered evidence of a VEC based on the reported material released, distance, and typically clayey soils in the area of the Subject Property.
Abandoned Service Station, City of Chicago, Satriano Texaco Service	South-southwest 204-feet Same	No	This facility was listed in the UST, LUST, EDR Hist Auto, and Brownfields databases. This facility was a gasoline service station in city directory records from 1973 to 1993. One 6,000-gallon gasoline, two

Facility Name & Address	Direction, Distance, Gradient Position Relative to Subject Property	Represent a VEC?	Comment
11500 S. Perry Avenue			5,000-gallon gasoline, and one 1,000-gallon used oil tanks were identified as having been removed in 2000 with a corresponding release of gasoline and used oil being reported. The Brownfields listing identifies that a Phase I ESA was completed for the facility in 2011 using grant funds. The listing further identifies that soil was reportedly impacted and that cleanup is needed. While this facility is identified as approximately 204 feet from the Subject Property, this facility is located over 600 feet from a proposed building, station, or electrical substation. Therefore, this listing is not considered evidence of a VEC based on the reported material released, distance, and typically clayey soils in the area of the Subject Property.
3 W. 114th Street	North 681-feet Same	No	This address was listed in the Brownfields database. The brownfields listing identifies that a Phase I ESA was completed for the facility in 2011 using grant funds for suspected petroleum sites. The database listing identifies that the site in 2011 was a vacant corner lot

Facility Name & Address	Direction, Distance, Gradient Position Relative to Subject Property	Represent a VEC?	Comment
			and a suspect abandoned service station. Based on the suspected former use as a service station with potential petroleum related impacts, distance, and typically clayey soils in the area of the Subject Property, this listing is not considered evidence of a VEC.
120th Street Yard and Shop			
Elmer Larson, Inc. / K-Five Construction 12401 S. Cottage Grove Avenue	Subject Property	Yes	This facility was listed in the FINDS, ECHO, AIRS, Tier 2, BOL, Chicago Env, ICIS, and FINDS databases. The reported use of this facility as an asphalt plant with records of at least 7 ASTs of various size (that contained diesel fuel, used oil, and other products), as well as the reported use or storage various hazardous substances (fuel oil, oil black, asphalt cements, emulsion 212, fatty acids, tall oil, polymers with glycerol, maleic anhydride, phthalic anhydride, and soybean oil) in volumes sufficient to require Tier II reporting is evidence of a VEC.
Penn Central Corp. / Lake Calumet Quad 810 E. 124th Street	Subject Property	Yes	This facility was listed in the SSU and CERCLIS databases. Documents indicate that a slurry wall was proposed in the late 1980's to be used at the facility to control the movement of contaminants. The documents also indicate that almost $170,000 of funds were requested in

Facility Name & Address	Direction, Distance, Gradient Position Relative to Subject Property	Represent a VEC?	Comment
			2004 to allow for Patrick Engineering, Inc. to conduct a site investigation. This facility was also identified on a map in US Scrap documentation accessed through the IEPA's document explorer database, as well as in the Hazardous Materials Technical Memorandum prepared by CWC Transit Group and dated August 2013. The Hazardous Materials Technical Memorandum identified this facility as a hazardous waste dump site and that over 400,000 gallons of liquid waste were reportedly pumped from the basement of on-site grain silos. Given the apparent proposed slurry wall, reported historic use of the facility as a hazardous waste dump site, and requested funding for a site investigation in 2004, this facility is considered evidence of a VEC.
Chicago MSD #3 (No address provided)	West-Southwest 73-feet Same	Yes	The facility was listed in the SWF/LF database as a closed landfill. The facility was also noted in the in the Hazardous Materials Technical Memorandum prepared by CWC Transit Group and dated August 2013. The Hazardous Materials Technical Memorandum identified this facility as an inactive landfill that was used for disposal of sand,

Facility Name & Address	Direction, Distance, Gradient Position Relative to Subject Property	Represent a VEC?	Comment
			gravel, and grit from sewage treatment by MWRD. Surface samples that were reportedly collected indicated the presence of PCBs, chloroform, chlordane, chromium, lead, toluene, and 4,4-dichlorodiphenyldichloroethane (DDD). As no reported removal or cleanup had occurred, the Hazardous Materials Technical Memorandum identified this site is a High Concern. Based on the reported presence of volatile chemicals in surface soil samples this facility is evidence of a VEC.
All American Recycling/ Keywell Corp/ S.G. Keywell Co. 11900 S. Cottage Grove Ave	Subject Property	Yes	This facility was listed in the LUST database with a history of a gasoline LUST incident in 1990. An NFR letter was subsequently reported in 1996. The facility was also listed in the SPILLS database for a non-LUST incident occurring on July 9, 2004. The facility was listed in the RCRA database as a Conditionally Exempt Small Quantity Generator in 1996 and Large Quantity Generator in 1992 of ignitable waste (D001) and corrosive waste (D002). No violations were identified in connection with the RCRA listing. Based on the facilities former status as a Large Quantity Generator of

Facility Name & Address	Direction, Distance, Gradient Position Relative to Subject Property	Represent a VEC?	Comment
			hazardous waste, the issuance of a NFR letter for the gasoline LUST incident prior to the inclusion of the indoor inhalation route as a potential pathway in the IEPA's cleanup regulations, this listing is considered evidence of a VEC.
US Scrap 123rd & Cottage Grove Avenue	Southwest 100-feet Same	Yes	This facility was listed in the SEMS, Consent, PRP, ICIS, ECHO, and FINDS databases. Records identify that the facility reportedly operated as an industrial chemical waste receiver from 1965 to 1975. From 1973 to 1975 the operator of the facility reportedly disposed of wastes at the facility and a related site. A landfill fire was reported at the facility in 1985, after which the USEPA conducted emergency response action which reportedly involved excavating and removing "heavily contaminated soils" and drummed wastes from a railroad embankment on the facility. The response action reportedly only addressed a portion of the known buried wastes. A letter from the IEPA dated June 2005 to the USEPA requested a time-critical removal assessment be conducted at the facility as soil, water, and sediment samples reportedly still contained "high levels

Facility Name & Address	Direction, Distance, Gradient Position Relative to Subject Property	Represent a VEC?	Comment
			of pesticides and SVOC contamination." Based on the reported historical use of the facility, and the presence of contamination remaining at the site in the mid 2000's, this facility is evidence of a VEC.
130th Street Station and Substation			
Chicago Metro Sanitary District #2, Chicago Metro Sanitary District #3, Chicago Metro Sanitary District #4, (No address provided)	East-Northeast 330-feet Same	Yes	The facility was listed in the NIPC database, a historical inventory of solid waste sites created originally in 1986. The NIPC report recorded locations of possible landfills using township, range, and section information, so exact placement was not always assured. No additional records were found of the property. Due to the reported historic landfill activity at the facility, this is evidence of a VEC.
Calumet NU-Earth Dis N. 130th & Dotty	Northeast 302-feet Same	No	The facility was listed in the SEMS database as an archived site active from 1984 to 1991. No additional records were found. Due to lack of additional information, this facility is not evidence of a VEC.
Altgeld Library 955 E. 131 Street	Southwest 1,462-feet Same	No	The facility was listed in the SRP database. A review of the IEPA's document explorer database for the facility identified that an NFR letter has not been issued for the facility. However, reports indicate that the facility was enrolled into the SRP to address PNA and metal soil

Facility Name & Address	Direction, Distance, Gradient Position Relative to Subject Property	Represent a VEC?	Comment
			contamination, and that contaminants were not expected to migrate off-site. Therefore, based on this information, this listing is not considered evidence of a REC.

8.3 Limitations

No VES can wholly eliminate uncertainty regarding the identification of VECs in connection with the Subject Property. The VES is intended to reduce, but not eliminate, uncertainty regarding whether or not a VEC exists in connection with a property, and the VES is not meant to be an exhaustive screening.

Section 9 - Conclusions

EDI performed a Phase I ESA of the Subject Property generally following the Practice. Limiting Conditions and exceptions from the Practice are presented in Section 1.1.4. of the report. The following conclusions have been made in relation to the Subject Property and are presented in Tables 9-1 through 9-6.

It should be noted that an identification number was assigned to each geographically discrete condition (RECs, CRECs, HRECs, and *de minimis*) identified in Tables 9-1 through 9-6. This was done to allow the user the ability to identify the approximate location of the discrete condition in the noted corresponding figure. Certain conditions were found in broad areas throughout the Subject Property, or adjoining area, or that were not interpreted to be geographically discrete by EDI. In these instances, these conditions were not assigned an individual identification number. The assignment of identification numbers to conditions was done generally in a north to south fashion along the alignment and does not represent a ranking of the hazard, severity, or potential impact of the condition. The noted figures are presented in Appendix A.

RECs

A REC is defined by the Practice as the presence or likely presence of any hazardous substances or petroleum products in, on, or at the Subject Property: (1) due to a release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. A total of 26 on-site RECs and 18 off-site RECs were identified in connection with the Subject Property.

On-Site RECs

Table 9-1 lists the on-site RECs that were identified in connection with the Subject Property.

Table 9-1: On-Site RECs

No.	Figure	Name	Description
--	--	Railroad Tracks	Railroad tracks were observed on and adjacent to the Subject Property throughout the area. These tracks exist at various locations on elevated embankments. The source of the fill material used to make the embankments is unknown. Most of these rail lines are also used to transport freight, which may include hazardous materials or petroleum products. Spills or releases that occurred on

No.	Figure	Name	Description
			or along these tracks may have impacted the Subject. Railroad rights of way are also typically maintained using herbicides for weed control. The Client should be aware that routine application of herbicides over time may result in elevated concentrations of chemicals in the surface soil and/or surface run off. Furthermore, releases may have occurred from creosote treated railroad ties or coal ash releases from historic steam train operations. Therefore, the presence of railroad tracks is evidence of a REC.
Subject Property – 103rd Street station to 111th Street station			
4	ES-1	403 W. 103rd Place	Historical Sanborn Fire Insurance (Sanborn) maps depict a fuel warehouse at the rear of this facility in 1950. The historical presence of a fuel warehouse at this facility is a REC.
5	ES-1	400 W. 103rd Place	Sanborn maps depict a coal yard at this facility from 1911 to 1950. The historical presence of a coal yard at this facility is a REC.
6	ES-1	B Van Dir Meer & Sons 400 W. 104th Street	Records from the City identified work permits issued in 1956 to inspect three 20,000-gallon fuel oil underground storage tanks (USTs) and to remove an unspecified number of existing tanks at this facility. No corresponding records indicating the three 20,000-gallon USTs have been removed were identified. Sanborn maps from this time period depict the facility with a building labeled fuel storage and coal yard. Sanborn maps from 1989 depict this facility as a junk yard. The historical presence of a junk yard, coal yard, and fuel oil tanks at this facility with tanks that may remain in the ground is a REC.
7	ES-1	Fred Syhora 401 W. 105th Street	This facility was identified with records for the installation and subsequent abandonment of four USTs. The tanks were reportedly installed in 1957 and consisted of two 15,000-gallon USTs with unspecified contents and two 3,500-gallon USTs for used motor oil. In 1970, two 15,000-gallon USTs and two 4,000-gallon USTs were reportedly abandoned in place by filling with sand. The reported presence of four abandoned USTs at this facility that may remain in place is a REC.

No.	Figure	Name	Description
8	ES-1	10514 S. Stewart Avenue	Evidence of automotive and equipment repair was observed at this facility during the site reconnaissance. Automotive and equipment repair typically generate wastes in the form of waste oil and other waste fluids as well as handle and store some amount of petroleum products or hazardous materials such as fuels, oils, paints, solvents, and other grease and oils. The use of this facility for automotive and equipment repair is a REC.
9	ES-1	Illinois Bell Telephone/ AT&T IL 413 W. 105th Street	Six USTs were reportedly installed at the facility between 1950 and 1974. Corresponding records for the removal of four USTs in 1988 were identified, along with a reported leaking UST (LUST) incident. As noted in the Hazardous Materials Technical Memorandum, dated August 21, 2013 and prepared by CWC Transit Group, the LUST incident relates to contamination from the four USTs removed in 1988. A review of the Illinois Environmental Protection Agency's (IEPA) online LUST database and document explorer database identified that a No Further Remediation (NFR) letter was issued for the LUST incident in March of 2005. Among the terms and conditions of the NFR letter, a land use restriction was specified, which noted that use of the facility was limited to industrial or commercial purposes. The issuance of an NFR letter for the LUST incident with land use restrictions would normally be considered evidence of a Controlled REC (CREC). However, the potential continued presence of two USTs in the subsurface at this facility is a REC.
9	ES-1	Cement Block Factory 10638 S. Stewart Avenue	This facility was identified a cement block factory in the 1950 Sanborn map with gasoline storage tank and five 50-foot-tall coal silos. Cement block factories typically use large quantities of concrete and aggregate, which is then mixed with water to form the blocks. The formed blocks are then cured in a kiln typically heated by coal or petroleum products. Aggregate used in cement block typically include sand, stone, and gravel. Blast-furnace slag, fly ash, and coal cinders have also been typically added to reduce the weight of the finished product. Historical sources indicate this facility was present from

No.	Figure	Name	Description
			1938 to the early 1960s. Cross-referencing Cook County records to the Sanborn maps indicates this facility was present at the noted address. The historical presence of a cement block factory is evidence of a REC.
10	ES-1	Midland Chemical Corporation/ Atlan Inc 400 W. 107th Street	This facility was identified with a history of four USTs, which may remain in place. City records indicate one 3,000-gallon UST and one 7,000-gallon UST were inspected in 1962. In 1975, one 2,000-gallon and one 4,000-gallon mineral spirits USTs were reportedly installed. No corresponding records of UST removals was identified. The 1989 Sanborn map notes a manufacturing facility with slag bin and several USTs. City records also identified a history of enforcement actions and inspections at the facility for the presence of "auto parts and oil on the ground." Observations during the site reconnaissance also noted evidence of auto related repair. The historical presence of manufacturing on the property with the reported presence of what appears to be four separate USTs at this facility and the reported issuance of violations for the presence of oil on the ground is a REC.
11	ES-1	407 - 411 W. 107th Street	This facility was identified as a coal yard in the 1950 Sanborn map with several gasoline storage tanks depicted. This facility was listed under several addresses in City records for complaints and subsequent inspections by City staff that appear to be related to what was a reported auto junk yard with complaints detailing that "the rear and side lots [are] filled with car parts and junk, and that a large quantity fluids and grease are present." The reported presence of an auto junk yard with large quantities of fluids and greases being present is a REC.
13	ES-2	Harris Transmission 410 W. 109th Street	The facility was identified in records as an automotive transmission repair shop from approximately 1991 to 2000. Automotive and equipment repair facilities typically generate wastes in the form of waste oil and other waste fluids as well as handle and store some amount of petroleum products or hazardous materials such as fuels, oils, paints, solvents, and other grease and oils. The

No.	Figure	Name	Description
			reported historical use of the facility for auto repair operations is a REC.
Subject Property – 111th Street station to Michigan Avenue station			
14	ES-2	William Ransom Transport 352 W. 110th Street	The facility was identified with a record of one 6,000-gallon gasoline UST that was reported as removed with a corresponding LUST incident being reported in February 1999 and assigned incident number 990399. A review of IEPA records identified that 20- and 45-day reports were submitted for the incident, but that no NFR letter has been issued. Based on the 45-day report, the UST appears to have been located south adjacent to the existing building. The reported presence of an open unresolved LUST incident for a gasoline release at the facility is a REC.
15	ES-2	340-350 W. 110th Place	This facility was identified as a contractor's yard in Sanborn maps from 1950 and 1989 with a gasoline storage tank and oil storage being noted. The historical presence of a contractor's yard with a tank and oil storage is a REC.
16	ES-2	Chatham Coal and Coke Co. 356 W. 111th Street	This facility was depicted as a coal yard in Sanborn maps from 1950. The historical presence of a coal yard is a REC.
26	ES-2	SRM Motors 11429 - 11439 S. Perry Avenue	The facility was identified in records as an automobile repair shop starting in the early 2000s. Observations during the site reconnaissance noted the continued presence of an auto repair facility at this location. The presence of auto repair operations at this facility since the early 2000s is a REC.
28	ES-2	Triangle Transmission 35 W. 115th Street	Records identified the presence of this automotive repair facility since at least 1977. Observations during the site reconnaissance noted the continued presence of this facility under the name Donald's Auto Repair.

No.	Figure	Name	Description
			This facility was listed in the UST databases with record of two 1,000-gallon gasoline tanks that were reported as removed in 1999. An associated LUST incident was reported and assigned incident number 992324. A review of IEPA records identified that a 20-day report was filed, but that no NFR letter has been issued, and that the IEPA does not appear to consider the issue resolved. The presence of an automotive repair facility since at least 1977 and the unresolved LUST incident for a release of gasoline is a REC.
31	ES-2	Cuter Sefer Oil 11521 S. State Street	The 1950 Sanborn map identifies this facility as a gas station with three USTs. This facility was identified in City records for one 1,000-gallon gasoline UST when a permit was reportedly issued to replace an existing tank in 1955. City records also identified a series eight inspections spanning from December 2013 to February 2015, which noted that the facility was a vacant city owned lot where fly dumping had previously occurred, and which had been cleaned up. The inspections were conducted to observe the lot for evidence of additional fly dumping, none of which was noted. The historical presence of gas station with three USTs at the facility, combined with a lack of records indicating the USTs were removed, as well as the reported history of fly dumping at the facility is a REC.
32	ES-2	Oak Park National Bank 11500 S. Michigan Avenue	This facility was identified in City records with a history of nine USTs. Records identified that a 315-gallon UST, one 1,000-gallon UST, and one 2,000-gallon UST were reportedly installed in May of 1958. Records further identified that one 2,000-gallon UST and five 300-gallon USTs were reportedly installed in March of 1959. Aerial photographs from this time period depict the construction of a strip mall at this location. The reported historic presence of USTs being installed at the facility, with no corresponding record of their removal, is a REC.

No.	Figure	Name	Description
33	ES-2	Flair Cleaners/ Betty Bright Cleaners 11518 S. Michigan Avenue	This facility was identified as dry cleaning plant under several names from 1981 to 2003 and was a registered conditionally exempt small quantity generator (CESQG) of hazardous wastes. This facility was also listed in City records relating to complaints and inspections. A complaint was filed in August 2004 that the facility was "dumping used chemical solution into the sewers throughout the area." Records also identified a series of eight inspections of the facility by city staff that were conducted between August 2002 and March 2007. Six of these inspections appeared to be regular periodic inspections of the facility and did not report issues of concern. Two of the inspection were noted to be conducted in response to the above noted complaint. These inspections were conducted on August 3, 2004 and August 12, 2004 and did not report to find evidence of the illegal disposal of materials in the sewer behind the shop. Based on the above information, the historical presence of a dry cleaning plant is a REC.
Subject Property - Michigan Avenue station to 130th Street station			
38	ES-2	The Shedd Company 301 E. 117th Street	This facility was identified in Sanborn maps from 1911 and 1950 as a manufacturer of ice cream and in 1989 as a potato chip factory. Sanborn maps depict the facility with two USTs. This facility was listed in City records with a history of USTs. City records identified that one 1,000-gallon gas tank was reportedly replaced in 1948, one 4,000-gallon fuel oil tank was reportedly installed in 1956, and one 6,000-gallon fuel oil tank was reportedly installed in 1957. The reported presence of three USTs at the facility, combined with a lack of records indicating the USTs were removed, is a REC.
39	ES-2	American Clybourn Finishing	This facility as depicted in the 1989 Sanborn map as a metal finishing facility. The facility registered as a large quantity generator of spent halogenated solvents used in degreasing (F001) in 1980. In 1995, the facility changed its status to a CESQG. The historic presence of a metal

No.	Figure	Name	Description
		11730 S. Front Avenue	finishing facility that was a LQG of spent solvents on the Subject Property for an apparent 15-year period is evidence of a REC..
40	ES-2	Stuart Chemical and Paint Inc. 11740 Front Street	This facility was identified in Sanborn maps from 1950 as a coal yard and paint factory in the 1989 map. This facility was noted as an apparent auto junkyard with bulk containers stored outdoors during the site reconnaissance. This facility was identified with a history of seven tanks. Six 1,000-gallon tanks and one 3,000-gallon tank were reportedly removed in January of 1990 and were reported to contain the following substances: toluene, xylenes, Stoddard solvent/naphtha, light aliphatic solvent naphtha, ethyl acetate, methyl isobutyl ketone, and methyl ethyl ketone. A corresponding LUST incident from 1990 was noted. A review of IEPA records indicates that the LUST incident is unresolved and that the IEPA's review of investigations undertaken at the time requested further information. Based on the reported open status of the LUST incident and continued use of this facility as an apparent auto junkyard with bulk containers being observed during this site reconnaissance, this facility is a REC.
41	ES-3	Illinois Central Track 119th Street	This facility was listed in the Bureau of Land (BOL) database. A review of the provided database information and the IEPA's BOL online database identified that the facility was listed in the states solid waste program in 1986. Based on the historical use of this facility as a railroad and for railroad operations, this listing is considered evidence of a REC.
42	ES-3	All American Recycling/ Keywell Corp/ S.G. Keywell Co. 11900 S. Cottage	This facility is a scrap metal recycling entity. Historical aerial sources appear to depict this facility starting in the 1950s, and observations during the site reconnaissance note its continued presence. However, it should be noted this facility appeared to extend past its present southwestern boundary and onto the Subject Property through the 1980s on what was most recently an asphalt plant operated by K-Five Construction.

No.	Figure	Name	Description
		Grove Avenue	The facility was listed in the Integrated Compliance Information System (ICIS) database for a formal enforcement action for penalty in 2010. The enforcement action reportedly related to Toxic Release Inventory (TRI) reporting under the Emergency Planning and Community Right-to-Know Act (EPCRA). The facility was listed in the UST database with a history of two 2,000-gallon gasoline USTs reported as removed in 1990. The facility was also listed in the LUST database with a history of a gasoline release reported in 1990 and a diesel release reporting in 1994. A review of IEPA records identified that an NFR letter was recorded in 1996 for the 1990 gasoline LUST incident with no noted requirements for engineered barriers or institutional controls. Records indicate that IEPA issued a non-LUST determination letter in 1994 for the diesel release. The facility was also listed in the SPILLS database for a spill non-LUST incident occurring on July 9, 2004. The facility was listed in the Resource Conservation and Recovery Act (RCRA) database as a CESQG in 1996 and Large Quantity Generator in 1992 of ignitable waste (D001) and corrosive waste (D002). The facility reportedly changed its status to non-generator in 2018. The historic and ongoing use of the facility for scrap metal processing, history of enforcement action for penalty, the facilities former status as a Large Quantity Generator of hazardous wastes, and the apparent presence of unremedied releases of diesel fuel, this facility is a REC.
44	ES-3	Elmer Larson, Inc./ K-Five Construction/ K Five Construction	This facility was operated as an asphalt plant from approximately 1987 through 2017. Based on historical aerials, this facility appears to have been built on former portions of the All American Recycling facility. City records noted the presence of berms as part of containment systems for ASTs and an outdoor drum

No.	Figure	Name	Description
		12401 S. Cottage Grove Avenue/ 12500 S. Cottage Grove Avenue	storage area, reported occurrences of fly dumping at or near the facility, and the reported presence of seven ASTs. The ASTs were identified as one 1,000-gallon diesel AST, one 8,000-gallon prime sealer AST, two 20,000-gallon used oil ASTs, one 14,000-gallon used oil AST, one 20,000-gallon AST identified as containing “asphalt/cement”, and one 2,000-gallon AST containing “Anti-Stripper.” During the site reconnaissance, a concrete containment structure with what appeared to be support saddles for the ASTs was observed. The Tier 2 database identified that the facility stored or used reportable quantities of the following hazardous chemicals in 2010 and 2014: fuel oil, oil black, asphalt cements, emulsion 212, fatty acids, tall oil, polymers with glycerol, maleic anhydride, phthalic anhydride, and soybean oil. The reported use of this facility as an asphalt plant with records of at least seven ASTs of various size (that contained diesel fuel, used oil, and other products), as well as the reported use or storage various hazardous substances (fuel oil, oil black, asphalt cements, emulsion 212, fatty acids, tall oil, polymers with glycerol, maleic anhydride, phthalic anhydride, and soybean oil) in volumes sufficient to require Tier II reporting is a REC.
48	ES-3	Penn Central Corp./ Lake Calumet Quad 810 E. 124th Street	This facility was listed in the State Sites Unit Listing (SSU) and Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) databases. The SSU database listed this facility with ID number 0316490002. A review of IEPA records indicate that a slurry wall was proposed in the late 1980s to be used at the facility to control the movement of contaminants. The documents also indicate that almost $170,000 of funds were requested by the IEPA in 2004 to allow for Patrick Engineering, Inc. to conduct a site investigation.

No.	Figure	Name	Description
			This facility was also identified on a map in a US Scrap documentation accessed through the IEPA's document explorer database, as well as in the Hazardous Materials Technical Memorandum prepared by CWC Transit Group and dated August 2013. The Hazardous Materials Technical Memorandum identified this facility as a hazardous waste dump site and that over 400,000 gallons of liquid waste were reportedly pumped from the basement of former on-site grain silos. Given the apparent proposed slurry wall, reported historic use of the facility as a hazardous waste dump site, and requested funding for a site investigation in 2004, this facility is considered a REC.

Off-Site RECs

Table 9-2 lists the off-site RECs that were identified in connection with the Subject Property.

Table 9-2: Off-Site RECs

No.	Figure	Name	Description of REC
Off-Site RECs - 95th Street station to 103rd Street station			
1	ES-1	Shell Oil/ Mobile Gas & Food Mart/ Sims Arco 4 E. 95th Street Northeast of the Subject Property Approximately 350 feet from Subject Property	This facility was a gasoline service station. From historical aerials this facility was constructed in the 1970s and was operated as a gas station until about 2017, when the Office of the State Fire Marshal (OSFM) records indicate the Client purchased the facility. During the site reconnaissance, this facility no longer appeared to be in active use as a gas station. Records indicate the facility has a 12,000-gallon gasoline, 8,000-gallon gasoline, and 6,000-gallon diesel USTs. No corresponding records indicating the USTs were removed were identified from the obtained documents, and observations from the site reconnaissance indicate the USTs remain in place. The historical operation of

No.	Figure	Name	Description of REC
			this facility from the 1970s to about 2017 as a gas station with three USTs that remain in the ground is a REC.
3	ES-1	Abbott Park Fieldhouse 45 E. 95th Street Northeast of the Subject Property Approximately 500 feet from Subject Property	The facility was listed in the LUST database for an 8,800-gallon heating oil UST removed in 1993. A review of the IEPA records identified that a pre-1974 letter was filed with the IEPA in 2007. Therefore, the release was exempted from the LUST regulations. Due to contamination from the LUST incident being allowed to apparently remain in place and no remedial action being required, the historical presence of a UST and LUST incident at the facility is a REC.
Off-Site RECs - 103rd Street station to 111th Street station			
17	ES-2	Roseland Tune Up Center 401 W. 111th Street West of the Subject Property Approximately 125 feet from the Subject Property	This auto repair facility was identified in records starting in the early 1980s. Observations from the site reconnaissance indicate the continued presence of an automotive repair facility with a three-bay garage. Therefore, this facility is a REC.
18	ES-2	Pentecostal Temple, Roseland Service Station 415-419 W. 111th Street West of the Subject Property Approximately 350 feet from the Subject Property	This facility was identified in records as a gasoline service station from approximately 1923 to 1928. The facility was listed in the LUST database for a used oil LUST incident on August 8, 1991, and a gasoline LUST incident on November 22, 1991. A review of IEPA records identified a letter from 2009, which essentially noted that the IEPA does not consider the LUST incidents resolved. The reported presence of open unresolved LUST incidents at the facility is a REC.

No.	Figure	Name	Description of REC
19	ES-2	Reiter Brothers 433 W. 111th Street West of the Subject Property Approximately 500 feet from the Subject Property	The facility was identified in records as a gasoline service station from the late 1920s to the 1970s. The historical presence of an auto service station for approximately 40 years is a REC.
Off-Site RECs – 111th Street station to Michigan Avenue station			
20	ES-2	CK Madderom Co. 355 W. 112th Street West of the Subject Property Approximately 100 feet from the Subject Property	This facility was depicted as a coal yard in Sanborn maps from 1911 and 1950. The historical presence of a coal yard is a REC.
21	ES-2	Sheldon Heights Service 332 W. 113th Street West Southwest of the Subject Property Approximately 100 feet from the Subject Property	The facility was identified in records as a gasoline station from at least 1950 to the 1970s. Sanborn maps from this period depict the facility with two gasoline USTs. No records indicating the USTs were removed were identified from the records obtained. The historical use of the facility as a gasoline station with two USTs is a REC.
27	ES-2	Abandoned Service/ City of Chicago/ Satriano Texaco Service	This facility was identified in records as a gasoline service station from at least the 1950 to 1993. One 6,000-gallon gasoline, two 5,000-gallon gasoline, and one 1,000-gallon used oil tanks were identified as having been removed in 2000 with a corresponding release of gasoline and used oil being reported. A review of IEPA

No.	Figure	Name	Description of REC
		11500 S. Perry Avenue Southwest of the Subject Property Approximately 200 feet from the Subject Property	records indicates that the LUST incident is apparently open and unresolved. The reported presence of an open unresolved LUST incident for the facility is a REC.
29	ES-2	Abandoned Gas Station/ Cox Donna 2 W. 115th Street Northwest of the Subject Property Approximately 160 feet from the Subject Property	This facility was identified with a record of one 4,000-galllon and one 3,000-gallon gasoline USTs, both of which are reported as removed. Two gasoline LUST incidents were reported, one in 1998 and a second in 2011. A review of IEPA records identified that pre-1974 letters were filed with the IEPA for both incidents. Therefore, the releases were exempted from the LUST regulations requiring cleanup. Therefore, the reported presence of two un-remediated gasoline LUST incidents at this facility is a REC.
34	ES-2	Trailer Factory/ Charter Bus Company 11575 S. Wabash Avenue Southwest of the Subject Property Approximately 70 feet from the Subject Property	This facility was identified in historical sources as a trailer factory with lacquer spraying operations by 1950. Observations during the site reconnaissance noted this facility was apparently used as an office and garage for a bus company. City records indicate that an inspection of the bus company was conducted in 2004 by City staff who reported to observe evidence of the illegal dumping of liquid wastes into the city stormwater sewer system. Obtained city records did not identify a corresponding record of enforcement action or complaints. Based on the historical use of this facility as a factory with lacquer spraying operations, the use of the property as an apparent bus garage with reported evidence of the illegal disposal of liquid wastes is a REC.
35	ES-2	Haney Khalil, Michigan Citgo/ Martin oil Service	This facility was identified as a gasoline service station from at least 1970 to present day. The facility was listed identified with a history of a 12,000-gallon gasoline,

No.	Figure	Name	Description of REC
		11600 S. Michigan Avenue Southwest of the Subject Property Approximately 280 feet from the Subject Property	15,000-gallon gasoline, 12,000-gallon gasoline USTs listed as currently in use, and a 6,000-gallon kerosene UST that was reported as abandoned in place in 2017. A LUST incident corresponding to the abandonment to the kerosene UST was also noted. A review of IEPA records indicates the LUST incident is unresolved. Therefore, the operation of a gas station at this facility from at least 1970, with four USTs that remain in place and an unresolved release of kerosene is a REC.
Off-Site RECs – Michigan Avenue station to 130th Street station			
43	ES-3	Bulkoa Inc./ Clean Harbors Env. Services/ Schneider Tank Lines/ Vacuum Industrial Pollution Intl/ Smith Systems Chicago Yard/ Unloading Unlimited/ Allwaste Tank Cleaning 11861-11901 S. Cottage Grove Avenue Northeast of the Subject Property Approximately 220 feet from the Subject Property	The facility was identified with a history of seven USTs that were reportedly removed in December 1997. A LUST incident was reported in 1997 for a release of diesel and gasoline. A review of IEPA records identified that an NFR letter was issued in 2003, which required institutional controls consisting of reliance of a groundwater ordinance and restricting use of the property to industrial or commercial purposes. IEPA records also identified that a Soil Vapor Extraction system was installed in 2001 at the facility to address the contamination from the release and was operated for a period of about 2 years. The facility was also listed under several different RCRA listings as a generator of hazardous waste, some with unique generator identification numbers but the same overall address and apparent physical location when reviewing historical aerials. Due to the overlapping RCRA listings, the exact status and history could not be readily determined. The facility apparently was mostly a small quantity generator of hazardous wastes, However, records identified Allwaste Tank Cleaning as a historic large quantity generator. Reported waste streams included ignitable (D001), corrosive (D002), reactive (D003), spent solvents (F001, F002, and F003), electroplating wastes (F006, F007), quenching oil bath residues (F010), quenching wastewater treatment

No.	Figure	Name	Description of REC
			sludges (F012), K-listed wastes (K001, K009, K010, K015, K016, K018, K019, K020, K021, K022, K023, K024, K027, K028, K030, K048, and K049), and U-listed wastes (U019, U055, U134, U140, U220, and U238). Given the reported history of this facility as an apparent generator of hazardous waste under a large variety of waste codes, this history of a gasoline and diesel fuel release with contamination allowed to remain in place subject to institutional controls, this facility is evidence of a REC.
45	ES-3	US Scrap/ U.S. Scrap/ U.S. Drum Disposal Co. 391 E. Kensington/ 123rd and Cottage Grove Avenue Southwest of the Subject Property Approximately 100 feet from the Subject Property	This facility is not currently listed as a National Priorities List (NPL) site for the U.S. Environmental Protection Agency's (USEPA) Superfund Program. However, the site was investigated by the USEPA for possible inclusion in the NPL starting in 1980. Records identify that the facility underwent several rounds of formal enforcement action with the USEPA starting in 1989 through at least 2013. Several actions were referred to the courts. USEPA records identified that the facility reportedly operated as an industrial chemical waste receiver from 1965 to 1975. From 1973 to 1975, the operator of the facility reportedly disposed of wastes at the facility and a related site. A landfill fire was reported at the facility in 1985, after which the USEPA conducted emergency response action, which reportedly involved excavating and removing "heavily contaminated soils" and drummed wastes from a railroad embankment on the facility. The response action reportedly only addressed a portion of the known buried wastes. A review of IEPA records identified a history of proposed investigations of the facility from 2004. A letter from the IEPA dated June 2005 to the USEPA requested a time-critical removal assessment be conducted at the facility as soil, water, and sediment samples reportedly still contained "high levels of pesticides and semi-volatile organic compounds (SVOC) contamination."

No.	Figure	Name	Description of REC
			Based on the reported historical use of the facility, with landfilling and burial of chemical related wastes, and the reported presence of SVOC and pesticide contamination remaining at the facility in the mid-2000s, this facility is a REC.
46	ES-3	Sherwin Williams Co. 11541 S. Champaign Avenue Northeast of Subject Property Approximately 500 feet from Subject Property	This facility is not currently listed as a NPL site for the USEPA's Superfund Program. However, the site was investigated by the USEPA for possible inclusion in the NPL. In 1994, a high corrective action priority was assigned by the USEPA. The facility was listed in the RCRA database as a Treatment, Storage, and Disposal (TSD) facility and Large Quantity Generator. The RCRA database listings identified a history of numerous wastes related to paint and coating production. The facility received several violations in the areas of records and reporting: final civil judicial action for compliance and/or monetary penalty, generators pre-transport, general, groundwater monitoring, financial requirements, permit application, container use and management, Land Disposal Restrictions (LDR) general, contingency plan and emergency procedures, tank system standards, federal or state statute, and closure/post closure. Institutional controls were established in 2012. Performance standards were attained with required controls in 2014. Remedy construction was planned for 2020. Due to the historic and active use of this facility for manufacturing paint and paint-related products, historic landfilling activities, and ongoing and planned remediation, this facility is considered evidence of a REC.
47	ES-3	Lake Calumet Smelting/ Inland Metals Refinery Company Incorporation	IEPA records identify that this facility was operated as a smelters from 1948 until 1989 and note the confirmed presence of soil and groundwater impacts at the facility through sampling conducted in the 1990s. Records also identify that the facility is not currently listed as an NPL site in the USEPA's Superfund Program. However, the facility was evaluated for possible inclusion in the NPL. The facility was identified as a generator of hazardous

No.	Figure	Name	Description of REC
		651 E. 119th Street/ 11901 S. Champlain Avenue Northeast of Subject Property Approximately 300 feet from Subject Property	waste containing lead (D008) and emission control dust/sludge from secondary lead smelting (K069). The RCRA listings identify that the facility received numerous violations in the late 1980s related to the operation of the site as a Treatment, Storage, Disposal (TSD) facility under the RCRA regulations. The facility was also historically identified as unpermitted and unauthorized solid waste disposal facility with a surface impoundment. IEPA records indicate this was used for the unauthorized disposal of wastes from the smelting process. Based on the reported presence of soil and groundwater contamination at the facility in the 1990s, the historic operation of this facility as a smelters, and the numerous RCRA violations reported in the 1980s, this facility is evidence of a REC in connection with the Subject Property.
50	ES-3	Cottage Grove Dump (No address provided) Northeast of Subject Property Approximately 175 feet from Subject Property	The facility was listed in the SWF/LF database as a historical landfill owned by the City and operated by the Department of Street and Sanitation. The location of the landfill was apparently reported using township and range information, so the exact location is unknown. The reported presence of a historic landfill in the vicinity of the site is evidence of a REC.
49	ES-3	MWRD Calumet Water Reclamation Plant 400 East 130th Street Southwest and northeast of Subject Property	This facility is a wastewater treatment plant that services the southern portion of Cook County, which includes residential, commercial, and industrial areas. This facility reportedly conducts primary, secondary, and tertiary water treatment operations and treats 354 million gallons of wastewater on average per day. The facility also reportedly generates approximately 100 tons of dried solids every day from treating wastewater, which are managed on site. Numerous clarifiers, settling basins, and related structures were observed in aerial

No.	Figure	Name	Description of REC
		Southwest Adjoining Property	photographs and during the site reconnaissance. Historical records indicate the facility was established in the 1930s and was progressively expanded until sometime in the 1980s. The facility was also identified as operating landfills. The *Hazardous Materials Technical Memorandum* (CWC Transit Group 2013) identified that an inactive landfill was used for disposal of sand, gravel, and grit from sewage treatment. Surface samples that were reportedly collected indicated the presence of polychlorinated biphenyls (PCBs), chloroform, chlordane, chromium, lead, toluene, and 4,4-dichlorodiphenyldichloroethane (DDD). Given the reported volume of wastewater treated at the facility with the sources of wastewater entering the facility including commercial and industrial operations, the management of solids at the facility, and the reported presence of landfills, the presence of a wastewater treatment facility is a REC.
51	ES-3	Calumet NU Earth/ Calumet NU-Earth Dis 130th Street and Doty Avenue Northeast of Subject Property Approximately 200 feet from Subject Property	This facility was identified in records as a possible landfill. Records further identified that this facility is not currently listed as a NPL site for the USEPA’s Superfund Program. However, the site was investigated by the USEPA for possible inclusion in the NPL in 1984 and 1985. The facility was archived by the USEPA in 1991. As this facility was identified as possible landfill, this listing is evidence of a REC.

CRECs

A CREC is defined by the Practice as past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls. These controls may be, but are not limited to, institutional controls or engineering barriers that are intended to prevent exposure to hazardous substances or petroleum products allowed to remain in place. These controls may limit or restrict the use of a property. By definition, the Practice considers a CREC to also represent a REC, since residual hazardous substances or petroleum products may remain present in the subsurface.

One off-site CREC was identified in connection with the Subject Property. Table 9-3 lists the CRECs identified in connection with the Subject Property.

Table 9-3: CRECs

No.	Figure	Name	Description of CREC
2	ES-1	Amoco 15459/ SS #15459/ Whalen Standard Services 36 W. 95th Street	The facility was a gasoline service station from the late 1960s to approximately 1997. The facility was identified with a history of three 10,000-gallon gasoline USTs that were reportedly removed in 1997. A gasoline LUST incident associated with the UST removal in 1997 was identified and an NFR letter closing the LUST incident was recorded in 2003. A review of IEPA records identified that the NFR letter included requirements for a highway authority agreement which extended party way into 95th Street and Lafayette Avenue. Based on the presence of an NFR letter, this listing is considered evidence of a CREC.

HRECs

A HREC is defined by the Practice as a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the Subject Property to any required controls.

A total of three HRECs were identified in connection with the Subject Property. Table 9-4 lists the HRECs identified in connection with the Subject Property.

Table 9-4: HRECs

No.	Figure	Name	Description of HREC
24	ES-2	Marquette Bank/ Vacant Building 133-139 W. 114th Street	This facility was identified with a history of a 2,000-gallon gasoline UST reportedly removed in 2001 with a corresponding LUST incident being reported. An NFR letter was issued for the LUST incident in 2002. A review of the IEPA records did not identify any engineering or institutional controls in connection with the NRF letter. Based on the reported status of the NFR letter, with no noted requirements for institutional controls or engineered barriers, this facility is considered evidence of a HREC.
30	ES-2	Tadros Musa/ Goodyear Auto Service 11442 S. Michigan Avenue	This facility was identified with a history of one 500-gallon used oil tank that was reported as removed in 1996. A corresponding LUST incident was reported and was issued an NFR letter in 1998. A review of IEPA records did not identify any requirements for engineered barriers or institutional controls. Based on the reported status of the NFR letter, with no noted requirements for institutional controls or engineered barriers, this facility is considered evidence of a HREC.
36	ES-2	Clark Service Station/ Bobs Super 100/ Clark Oil and Refining 11555 S. Michigan Avenue	The facility was identified a gasoline service station with a history of two 6,000-gallon gasoline and one 7,500-gallon gasoline UST reportedly removed in 1991. A gasoline LUST incident was also reported in 1991. An NFR letter was recorded in 1995. A review of the IEPA's online LUST database did not identify any requirements for engineered barrier or institutional controls with the NFR letter. Based on the reported status of the NFR letter, with no noted requirements for institutional controls or engineered barriers, this facility is considered evidence of a HREC.

De Minimis Conditions

A *de minimis* condition is defined by the Practice as a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis* conditions are not RECs and are not CRECs.

A total of six *de minimis* conditions were identified in connection with the Subject Property. Table 9-5 presents the *de minimis* conditions that were identified in connection with the Subject Property.

Table 9-5: *De Minimis* Conditions

No.	Figure	Name	Description of *De Minimis* Condition
--	--	Small auto-related spills	Site reconnaissance observations noted the presence of numerous minor staining on the paved parking and drive areas located on and adjacent to the Subject Property. The stains appear to be the result of leakage of automobile-related fluids and not the result of a large-scale spills.
--	--	Household wastes	Site reconnaissance observations identified small piles or loose trash of apparent household-related wastes that were “fly dumped” throughout the Subject Property. The observed materials did not appear to be evidence of systematic landfilling of wastes.
12	ES-2	405 W. 108th Street	Site reconnaissance observations identified two empty plastic 55-gallon drums on the ground. The drums appeared to have been fly dumped within a larger vacant grassy area on the property. The drums were located on an area of ground that appeared to have been disturbed and that was not supporting vegetative growth.
23	ES-2	11336 S. Yale Avenue	This address was listed in City records for an inspection occurred on February 4, 1998 at the facility where city staff observed a large open fire in the rear yard and a work crew removing roofing materials and disposing of it by burning. Two citations were reportedly issued. A review of Cook County Assessor records identifies this facility as a single-family home. Based on the above information, this listing is considered evidence of a *de minimis* condition.
25	ES-2	Clearwater Technology 11426 S. Perry Avenue	The facility is a former generator of hazardous waste. The facility generated the following wastes: chromium (D007), benzene (D018), barium (D005), lead (D008), methyl ethyl ketone (D035), ignitable waste (D001), corrosive waste (D002), and halogenated solvents (F001). No records of violations were noted with the listing. The historic presence of

No.	Figure	Name	Description of *De Minimis* Condition
			a hazardous waste generator on the Subject Property, with no reported violations, is evidence of a *de minimis* condition.
37	ES-2	128 E. 116th Street	Site reconnaissance observation identified an approximately 275-gallon tote of unknown contents. The tote appeared discolored and displayed evidence of staining on its sides.

VECs

A VEC is the presence or likely presence of one or more volatile chemicals of concern (COC) in the subsurface of the site caused by the release of vapors from contaminated soil or groundwater either on or near the Subject Property. As part of the Practice, the environmental professional is to evaluate the potential for the migration or encroachment of hazardous substances or petroleum products in the vapor phase within the subsurface. Within the scope of services requested by the Client, VECs were only evaluated for the locations of proposed buildings, stations, and electrical substations. While the method of the evaluation is not specified by the Practice, EDI completed the VES in general accordance with ASTM Standard E2600-15, Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions.

A total of 10 on-site VECs and five off-site VECs were identified in connection with the Subject Property. Table 9-6 lists the VECs that were identified in connection with the Subject Property.

Table 9-6: VECs

No.	Figure	Name	Description of VEC
103rd Street station and substation			
6	ES-1	B Van Dir Meer & Sons 400 W. 104th Street	This facility is on the Subject Property and identifies a history of three USTs, which may remain in the subsurface. The potential continued presence of these tanks on the Subject Property and possibility of releases from them represents a VEC.
7	ES-1	Fred Syhora 401 W. 105th Street	This facility is on the Subject Property and has records of installation and subsequent abandonment of four USTs in 1970. The reported abandonment of four USTs on the Subject Property prior and possibility of releases from them represents a VEC.
9	ES-1	Illinois Bell Telephone/ AT&T IL	This facility is on the Subject Property and has a record of a LUST incident. The LUST incident was remediated

No.	Figure	Name	Description of VEC
		413 W. 105th Street	and issued an NFR letter in 2005, prior to the inclusion of the indoor inhalation route as a potential pathway in the IEPA's cleanup regulations. The NFR letter notes contamination was allowed to remain in place subject to the restrictions of the NFR letter. The known contamination on the Subject Property represents a VEC.
111th Street station and substation			
14	ES-2	William Ransom Transport 352 W. 110th Street	This facility is on the Subject Property and has a record of a gasoline LUST incident in 1999. IEPA records indicated the LUST incident is open and unresolved. The reported presence of an open unresolved LUST incident for a gasoline release at the facility represents a VEC.
18	ES-2	Pentecostal Temple, Roseland Service Station 415-419 W. 111th Street West of the Subject Property Approximately 350 feet from the Subject Property	The facility was listed in the LUST database for a used oil LUST incident on August 8, 1991, and a gasoline LUST incident on November 22, 1991. A review of IEPA records identified a letter from 2009, which essentially noted that the IEPA does not consider the LUST incidents resolved. The reported presence of an open unresolved LUST incidents at the facility represents a VEC.
Michigan Avenue Street station and 116th Street substation			
31	ES-2	Cuter Sefer Oil 11521 S. State Street	This facility is on the Subject Property and identified as in the 1950 Sanborn map as a gas station with three UST. City records note a UST was reportedly replaced in 1955. The reported presence of a 1,000-gallon UST at the facility, combined with a lack of records indicating the UST was removed, represents a VEC.
32	ES-2	Oak Park National Bank 11500 S. Michigan Avenue	This facility is on the Subject Property and is identified in City records with a history of nine USTs. Records identified that a 315-gallon UST, one 1,000-gallon UST, and one 2,000-gallon UST were reportedly installed in May of 1958. Records further identified that one 2,000-

No.	Figure	Name	Description of VEC
			gallon UST and five 300-gallon USTs were reportedly installed in March of 1959. Aerial photographs from this time period depict the construction of a strip mall at this location. The reported historic presence of USTs being installed at the facility, with no corresponding record of their removal, represents a VEC.
33	ES-2	Flair Cleaners, Betty Bright Cleaners 11518 S. Michigan Avenue	This facility is on the Subject Property and was identified as dry cleaning plant under several names from 1981 to 2003. This facility was also listed in City records relating to complaints and inspections. A complaint was filed in August 2004 that the facility was “dumping used chemical solution into the sewers throughout the area.” Records also identified a series of eight inspections of the facility by City staff that were conducted between August 2002 and March 2007. Six of these inspections appeared to be regular periodic inspections of the facility and did not report issues of concern. Two of the inspections were noted to be conducted in response to the above noted complaint. These inspections were conducted on August 3, 2004 and August 12, 2004 and did not report to find evidence of the illegal disposal of materials in the sewer behind the shop. Based on the above information, the historical presence of a dry cleaning plant on the Subject Property represents a VEC.
36	ES-2	Clark Service Station/ Bobs Super 100/ Clark Oil and Refining 11555 S. Michigan Avenue Southwest of the Subject Property	The facility is on the Subject Property and was listed in the LUST database for a gasoline release in 1991. The LUST incident was remediated and issued an NFR letter in 2005. As the NFR letter was issued prior to the inclusion of the indoor inhalation route as a potential pathway in the IEPA’s cleanup regulations, the LUST incident represents a VEC.

No.	Figure	Name	Description of VEC
		Approximately 70 feet from the Subject Property	
120th Street yard and shop			
42	ES-3	All American Recycling/ Keywell Corp S.G/ Keywell Co./ Keywell Co. 11900 S. Cottage Grove Avenue	This facility is a scrap metal recycling entity. Historical aerial sources appear to depict this facility starting in the 1950s and observations during the site reconnaissance note its continued presence. However, it should be noted this facility appeared to extend past its present southwestern boundary and onto the Subject Property through the 1980s on what was most recently an asphalt plant operated by K-Five Construction. This facility was identified with a LUST incident in 1990. An NFR letter was subsequently reported in 1996. The facility was also listed in the SPILLS database for a non-LUST incident occurring on July 9, 2004. The facility was listed in the RCRA database as a Conditionally Exempt Small Quantity Generator in 1996 and Large Quantity Generator in 1992 of ignitable waste (D001) and corrosive waste (D002). Based on the facilities former status as a Large Quantity Generator of hazardous waste, the issuance of an NFR letter for the gasoline LUST incident prior to the inclusion of the indoor inhalation route as a potential pathway in the IEPA's cleanup regulations, this facility represents a VEC.
44	ES-3	Elmer Larson, Inc. / K-Five Construction 12401 S. Cottage Grove Avenue	This facility is on the Subject Property. The reported use of this facility as an asphalt plant with records of at least seven ASTs of various sizes that contained diesel fuel, used oil, and other products, as well as the reported use or storage of various hazardous substances (fuel oil, oil black, asphalt cements, emulsion 212, fatty acids, tall oil, polymers with glycerol, maleic anhydride, phthalic anhydride, and soybean oil) in volumes sufficient to require Tier II reporting represents a VEC.

No.	Figure	Name	Description of VEC
45	ES-3	US Scrap/ U.S. Scrap/ U.S. Drum Disposal Co. 391 E. Kensington/ 123rd Street and Cottage Grove Avenue Southwest of the Subject Property Approximately 100 feet from the Subject Property	Based on the reported historical use of the facility, with landfilling and burial of chemical related wastes, and the reported presence of semi-volatile organic compounds (SVOC) and pesticide contamination remaining at the facility in the mid-2000s, this facility represents a VEC.
48	ES-3	Penn Central Corp./ Lake Calumet Quad 810 E. 124th Street	This facility is on the Subject Property. Given the reported historic use of the facility as a hazardous waste dump site and IEPA requested funding for a site investigation in 2004, this facility represents a VEC.
49	ES-3	Chicago MSD #3 (No address provided) Southwest and northeast of Subject Property Southwest Adjoining Property	The facility is believed to be part of the larger MWRD Calumet Water Reclamation Plant facility. This facility was identified in the *Hazardous Materials Technical Memorandum* (CWC Transit Group 2013). The *Hazardous Materials Technical Memorandum* identified this facility as an inactive landfill. Surface samples that were reportedly collected indicated the presence of PCBs, chloroform, chlordane, chromium, lead, toluene, and 4,4-dichlorodiphenyldichloroethane (DDD). Based on the reported presence of volatile chemicals in surface soil samples, this facility represents a VEC.
130th Street station and substation			
49	ES-3	Chicago Metro Sanitary District #2, Chicago Metro Sanitary District #3,	The facility is believed to be part of the larger MWRD Calumet Water Reclamation Plant facility. The facility was listed in a historical inventory of solid waste sites created originally in 1986. The Northeastern Illinois Planning Commission (NIPC) report recorded locations

No.	Figure	Name	Description of VEC
		Chicago Metro Sanitary District #4, (No address provided) Southwest and northeast of Subject Property Southwest Adjoining Property	of possible landfills using township, range, and section information, so exact placement was not always assured. Due to the reported historic landfill activity at the facility, this represents a VEC.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Environmental Interest/Information System:
ACES (Illinois - Agency Compliance And Enforcement System) is the Illinois EPA Project to facilitate the permitting operations
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Facility URL: http://ofmpub.epa.gov/enviro/fii_query_detail.disp_program_facility?p_registry_id=110003048522

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Registry ID: 110001851256
Facility URL: http://ofmpub.epa.gov/enviro/fii_query_detail.disp_program_facility?p_registry_id=110001851256

Environmental Interest/Information System:
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants.
AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.
ACES (Illinois - Agency Compliance And Enforcement System) is the Illinois EPA Project to facilitate the permitting operations
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Facility URL:	http://ofmpub.epa.gov/enviro/fii_query_detail.disp_program_facility?p_registry_id=110003052730

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

Environmental Interest/Information System:

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

ELMER LARSON, INC. (Continued) **1005636907**

ACES (Illinois - Agency Compliance And Enforcement System) is the Illinois EPA Project to facilitate the permitting operations

Environmental Interest/Information System:
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.
AIR EMISSIONS CLASSIFICATION UNKNOWN
ACES (Illinois - Agency Compliance And Enforcement System) is the Illinois EPA Project to facilitate the permitting operations
AIR MINOR

Environmental Interest/Information System:

ACES (Illinois - Agency Compliance And Enforcement System) is the Illinois EPA Project to facilitate the permitting operations
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Facility URL: http://ofmpub.epa.gov/enviro/fii_query_detail.disp_program_facility?p_registry_id=110003059831

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

ACES (Illinois - Agency Compliance And Enforcement System) is the Illinois EPA Project to facilitate the permitting operations

RCRAInfo is a national information system that supports the Resource

STUART CHEMICAL & PAINT INC. (Continued) **1000614197**

Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Property Description: The property is currently vacant and is an abandoned service station property. An ~ 60' by 25' concrete pad remains on the site and no other improvements remain on the site. Until the 1920's, the site was occupied by two two-story structures, a dwelling structure and a stable/garage. From ~ 1927 -1950, the buildings were razed and replaced by a gas filling station. In 1953, the existing gas filling station was demolished and replaced with a new facility. The property operated as a gas filling station until the late 1980's. In 2000, the City of Chicago used its enforcement powers to remove non-compliant USTs and demolished the remaining buildings. The City of Chicago demolished the remaining structure. The City of Chicago foreclosed on demolition lien and acquired the property.

Facility URL: http://ofmpub.epa.gov/enviro/fii_query_detail.disp_program_facility?p_registry_id=110005851890

Environmental Interest/Information System:
ACES (Illinois - Agency Compliance And Enforcement System) is the Illinois EPA Project to facilitate the permitting operations
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Facility URL: http://ofmpub.epa.gov/enviro/fii_query_detail.disp_program_facility?p_registry_id=110001290068

Environmental Interest/Information System:
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

AMERICAN CLYBOURN FINISHING (Continued) **1000359773**

ACES (Illinois - Agency Compliance And Enforcement System) is the Illinois EPA Project to facilitate the permitting operations
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

. Waste code: D001
. Waste name: IGNITABLE WASTE

. Waste code: F002
. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F003
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F005
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Environmental Interest/Information System:

ALL AMERICAN RECYCLING INC (Continued) **1004693217**

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.
ACES (Illinois - Agency Compliance And Enforcement System) is the Illinois EPA Project to facilitate the permitting operations
AIR EMISSIONS CLASSIFICATION UNKNOWN
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
AIR MINOR
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA’s programs. The vision for ICIS is to replace EPA’s independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System:
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ACES (Illinois - Agency Compliance And Enforcement System) is the Illinois EPA Project to facilitate the permitting operations
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA’s programs. The vision for ICIS is to replace EPA’s independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System:

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

ACES (Illinois - Agency Compliance And Enforcement System) is the Illinois EPA Project to facilitate the permitting operations

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport,

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No

CHICAGO, CITY OF-ROSELAND STA (Continued) **1001077005**

Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Historical Generators:
Date form received by agency: 2008-03-01 00:00:00.0
Site name: CHICAGO, CITY OF-ROSELAND STA
Classification: Large Quantity Generator

Date form received by agency: 2006-04-01 00:00:00.0
Site name: ROSELAND PUMPING STATION
Classification: Not a generator, verified

Date form received by agency: 1996-03-01 00:00:00.0
Site name: ROSELAND PUMPING STATION
Classification: Large Quantity Generator

Date form received by agency: 1995-11-29 00:00:00.0
Site name: ROSELAND PUMPING STATION
Classification: Large Quantity Generator

Hazardous Waste Summary:

. Waste code: D002
. Waste name: CORROSIVE WASTE

Facility Has Received Notices of Violations:
Regulation violated: SR - 722.141(a)
Area of violation: Generators - Records/Reporting
Date violation determined: 1997-07-10 00:00:00.0
Date achieved compliance: 1997-10-22 00:00:00.0
Violation lead agency: State
Enforcement action: NON-FINANCIAL RECORD REVIEW
Enforcement action date: 1997-08-08 00:00:00.0
Enf. disposition status: Not reported
Enf. disp. status date: Not reported
Enforcement lead agency: State
Proposed penalty amount: Not reported
Final penalty amount: Not reported
Paid penalty amount: Not reported

Evaluation Action Summary:
Evaluation date: 1997-07-10 00:00:00.0
Evaluation: VIOLATION NOTICE (VN)
Area of violation: Generators - Records/Reporting
Date achieved compliance: 1997-10-22 00:00:00.0
Evaluation lead agency: State

Property Description:	Property is a vacant corner lot and a suspect abandoned service station. The property was vacant until 1911. Records indicate a store was present on a portion of the site until ~ 1950 when a second building residential was added. The store was removed something in 1975 and the residential building and what appears to be a garge remained until 1998, when the City of Chicago demolished the remaining structure. The City of Chicago foreclosed on demolition lien and acquired the property.

Proposed penalty amount: Not reported
Final penalty amount: Not reported
Paid penalty amount: Not reported

Evaluation Action Summary:
Evaluation date: 1993-09-02 00:00:00.0
Evaluation: STATE RCRA/REFER TO STATE SUPERF/REMEDIA
Area of violation: TSD - General Facility Standards
Date achieved compliance: 1993-02-10 00:00:00.0
Evaluation lead agency: State

Evaluation date: 1993-09-02 00:00:00.0
Evaluation: VIOLATION NOTICE (VN)
Area of violation: TSD - Preparedness and Prevention
Date achieved compliance: 1993-02-10 00:00:00.0
Evaluation lead agency: State

Evaluation date: 1993-09-02 00:00:00.0
Evaluation: VIOLATION NOTICE (VN)
Area of violation: TSD - Financial Requirements
Date achieved compliance: 1993-02-10 00:00:00.0
Evaluation lead agency: State

Evaluation date: 1993-09-02 00:00:00.0
Evaluation: VIOLATION NOTICE (VN)
Area of violation: TSD - Waste Pile Standards
Date achieved compliance: 1993-02-10 00:00:00.0
Evaluation lead agency: State

Evaluation date: 1993-09-02 00:00:00.0
Evaluation: VIOLATION NOTICE (VN)

Handler Activities Summary:

U.S. importer of hazardous waste:	No
Mixed waste (haz. and radioactive):	No
Recycler of hazardous waste:	No
Transporter of hazardous waste:	No
Treater, storer or disposer of HW:	No
Underground injection activity:	No
On-site burner exemption:	No
Furnace exemption:	No
Used oil fuel burner:	No
Used oil processor:	No

CHICAGO TRANSIT AUTHORITY (Continued) **1000166348**

User oil refiner:	No
Used oil fuel marketer to burner:	No
Used oil Specification marketer:	No
Used oil transfer facility:	No
Used oil transporter:	No

Environmental Interest/Information System:

ACES (Illinois - Agency Compliance And Enforcement System) is the
Illinois EPA Project to facilitate the permitting operations
RCRAInfo is a national information system that supports the Resource
Conservation and Recovery Act (RCRA) program through the tracking of
events and activities related to facilities that generate, transport,
and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA
program staff to track the notification, permit, compliance, and
corrective action activities required under RCRA.

Environmental Interest/Information System:

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.
ACES (Illinois - Agency Compliance And Enforcement System) is the Illinois EPA Project to facilitate the permitting operations
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

AFS (Aerometric Information Retrieval System (AIRS) Facility

F & R QUALITY CLEANERS (Continued) **1000117870**

Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.
ACES (Illinois - Agency Compliance And Enforcement System) is the Illinois EPA Project to facilitate the permitting operations
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

EPA Region: 05
Land type: Private
Classification: TSDF
Description: Handler is engaged in the treatment, storage or disposal of hazardous waste
Classification: Large Quantity Generator
Description: Handler: generates 1,000 kg or more of hazardous waste during any calendar month; or generates more than 1 kg of acutely hazardous waste during any calendar month; or generates more than 100 kg of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste during any calendar month; or generates 1 kg or less of acutely hazardous waste during any calendar month, and accumulates more than 1 kg of acutely hazardous waste at any time; or generates 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste during any calendar month, and accumulates more than 100 kg of that material at any time

Owner/Operator Summary:

Handler Activities Summary:

U.S. importer of hazardous waste:	No
Mixed waste (haz. and radioactive):	No
Recycler of hazardous waste:	No
Transporter of hazardous waste:	No
Treater, storer or disposer of HW:	No
Underground injection activity:	No
On-site burner exemption:	No
Furnace exemption:	No
Used oil fuel burner:	No
Used oil processor:	No
User oil refiner:	No
Used oil fuel marketer to burner:	No
Used oil Specification marketer:	No
Used oil transfer facility:	No
Used oil transporter:	No

. Waste code: D035
. Waste name: METHYL ETHYL KETONE

. Waste code: D037
. Waste name: PENTACHLOROPHENOL

. Waste code: D040
. Waste name: TRICHLORETHYLENE

. Waste code: F001
. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

SHERWIN WILLIAMS CO (Continued) **1000371369**

. Waste code: F002
. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F003
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F004
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: CRESOLS, CRESYLIC ACID, AND NITROBENZENE; AND THE STILL BOTTOMS FROM THE RECOVERY OF THESE SOLVENTS; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F005
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 59607

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs): 529

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Land type:	Private

SHERWIN WILLIAMS CO (Continued) **1000371369**

Classification:	TSDF
Description:	Handler is engaged in the treatment, storage or disposal of hazardous waste
Classification:	Large Quantity Generator
Description:	Handler: generates 1,000 kg or more of hazardous waste during any calendar month; or generates more than 1 kg of acutely hazardous waste during any calendar month; or generates more than 100 kg of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste during any calendar month; or generates 1 kg or less of acutely hazardous waste during any calendar month, and accumulates more than 1 kg of acutely hazardous waste at any time; or generates 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste during any calendar month, and accumulates more than 100 kg of that material at any time

Owner/Operator Summary:

Owner/operator name:	SHERWIN WILLIAMS CO
Owner/operator address:	101 PROSPECT AVE NW CLEVELAND, OH 44115
Owner/operator country:	US
Owner/operator telephone:	Not reported
Owner/operator email:	Not reported
Owner/operator fax:	Not reported
Owner/operator extension:	Not reported
Legal status:	Private
Owner/Operator Type:	Owner
Owner/Op start date:	1888-01-01 00:00:00.
Owner/Op end date:	Not reported

Handler Activities Summary:

U.S. importer of hazardous waste:	No
Mixed waste (haz. and radioactive):	No
Recycler of hazardous waste:	No
Transporter of hazardous waste:	No
Treater, storer or disposer of HW:	No
Underground injection activity:	No
On-site burner exemption:	No
Furnace exemption:	No
Used oil fuel burner:	No
Used oil processor:	No
User oil refiner:	No

SHERWIN WILLIAMS CO (Continued) **1000371369**

Used oil fuel marketer to burner:	No
Used oil Specification marketer:	No
Used oil transfer facility:	No
Used oil transporter:	No

. Waste code: U239
. Waste name: BENZENE, DIMETHYL- (I,T) (OR) XYLENE (I)

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 59607

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs): 529

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.
Amount (Lbs): 1159

Waste code: D004
Waste name: ARSENIC
Amount (Lbs): 6435

Waste code: D007
Waste name: CHROMIUM
Amount (Lbs): 165

Waste code: D008
Waste name: LEAD
Amount (Lbs): 6435

Waste code: D009
Waste name: MERCURY
Amount (Lbs): 61

Waste code: D035
Waste name: METHYL ETHYL KETONE
Amount (Lbs): 57094

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL

SHERWIN WILLIAMS CO (Continued) **1000371369**

ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Amount (Lbs): 55935

Waste code: F005
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Amount (Lbs): 55935

Environmental Interest/Information System:

ACES (Illinois - Agency Compliance And Enforcement System) is the Illinois EPA Project to facilitate the permitting operations
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
